

SURFACE VEHICLE RECOMMENDED PRACTICE

J1939-71

**REV.
JUN2006**

Issued 1994-08
Revised 2006-06

Superseding J1939-71 DEC2004

Vehicle Application Layer (through December 2004)

Foreword

This series of SAE Recommended Practices has been developed by the Truck and Bus Control and Communications Network Subcommittee of the Truck and Bus Electrical and Electronics Committee. The objectives of the subcommittee are to develop information reports, recommended practices, and standards concerned with the requirements design and usage of devices that transmit electronic signals and control information among vehicle components. The usage of these documents is not limited to truck and bus applications; other applications may be accommodated with immediate support being provided for construction and agricultural equipment, and stationary power systems. These documents are intended as a guide toward standard practice and are subject to change so as to keep pace with experience and technical advances.

SAE Technical Standards Board Rules provide that: "This report is published by SAE to advance the state of technical and engineering sciences. The use of this report is entirely voluntary, and its applicability and suitability for any particular use, including any patent infringement arising therefrom, is the sole responsibility of the user."

SAE reviews each technical report at least every five years at which time it may be reaffirmed, revised, or cancelled. SAE invites your written comments and suggestions.

SAE WEB ADDRESS:

1. Scope

As described in the parent document, SAE J1939, there is a minimum of seven documents required to fully define a complete version of this network. This particular SAE Recommended Practice, SAE J1939/71, describes an Application Layer for vehicle use.

1.1 Rationale

New parameters and parameter groups are reviewed and discussed by the Subcommittee on a regular basis. This recommended practice has been updated to reflect all changes and additions approved and balloted through December 2004.

2. References

2.1 Applicable Documents

General information regarding this series of recommended practices is found in SAE J1939. The latest issue of SAE publications shall apply.

2.1.1 SAE PUBLICATIONS

3. Definitions

See SAE J1939 for terms and definitions that are not defined in this document.

4. Abbreviations

ACC	Adaptive Cruise Control or Autonomous Cruise Control
ATA	American Trucking Association
CTI	Central Tire Inflation
EBS	Electronic Braking System
FMS	Fleet Management System
Kp	Engine endspeed governor gain
ROP	Roll Over Prevention
VDC	Vehicle Dynamic (Stability) Control
VGT	Variable Geometry Turbocharger
VMRS	Vehicle Maintenance Reporting System

See SAE J1939 for additional abbreviations that may be used in this document.

5. Technical Requirements

The Application Layer provides a means for application processes to access the OSI environment. This layer contains management functions and generally useful mechanisms to support applications.

5.1 General Guidelines

5.1.1 SIGNAL CHARACTERIZATION

It is the intent of the SAE J1939 network to provide current data and signals from a source so that it may be used by other nodes. It is recommended that the time between physical data acquisition of a signal and the transmission of the data should not exceed two times the repetition rate defined for the data. Additional constraints may be defined for certain parameters (see also 5.1.7.2).

5.1.2 MESSAGE FORMAT

The message format of SAE J1939 uses the parameter group number as the label for a group of parameters. Each of the parameters within the group can be expressed in ASCII, as scaled data defined by the ranges described in 5.1.4, or as function states consisting of two or more bits. Alphanumeric data will be transmitted with the most significant byte first. Unless otherwise specified, alphanumeric characters will conform to the ISO Latin 1 ASCII character set as shown in section 5.1.3. Other parameters consisting of 2 or more data bytes shall be transmitted least significant byte first.

The type of data shall also be identified for each parameter. Data may be either status or measured. Status specifies the present state of a multi-state parameter or function as a result of action taken by the transmitting node. This action is the result of a calculation which uses local and/or network "measured" and/or "status" information. Note that specific confirmation of this action is not necessarily assured. For instance, the status may indicate that a solenoid has been activated, yet no measurement may have been taken to ensure the solenoid accomplished its function. Examples of status-type data are: engine brakes are enabled, PTO speed control is active, cruise control is active, the cruise control is in the "set" state of operation (as opposed to a measured indication that the "set" switch contacts are closed), fault codes, torque/speed control override modes, desired speed/speed limit, engine torque mode, engine's desired operating speed, engine's operating speed asymmetry adjustment, etc.

Measured data conveys the current value of a parameter as measured or observed by the transmitting node to determine the condition of the defined parameter. Examples of measured-type data are: boost pressure, ignition on/off, cruise set switch activated, maximum cruise speed, cruise set speed, engine speed, percent load at current speed, etc.

5.1.3 ISO LATIN 1 CHARACTER SET

Horizontal boldface characters are the single hexadecimal digit representing the lower nibble of the single byte code for the character. Vertical boldface characters are the single hexadecimal digit representing the upper nibble of the single byte code for the character.

5.1.4 PARAMETER RANGES

Table 1 defines the ranges used to determine the validity of a transmitted signal. Table 2 defines the ranges used to denote the state of a discrete parameter and Table 3 defines the ranges used to denote the state of a control mode command. The values in the range "error indicator" provide a means for a module to immediately indicate that valid parametric data is not currently available due to some type of error in the sensor, sub-system, or module.

The values in the range "not available" provide a means for a module to transmit a message which contains a parameter that is not available or not supported in that module. The values in the range "not requested" provide a means for a device to transmit a command message and identify those parameters where no response is expected from the receiving device.

If a component failure prevents the transmission of valid data for a parameter, the error indicator as described in Tables 1 and 2 should be used in place of that parameter's data. However, if the measured or calculated data has yielded a value that is valid yet exceeds the defined parameter range, the error indicator should not be used. The data should be transmitted using the appropriate minimum or maximum parameter value.

5.1.5 ASSIGNMENT OF RANGES TO NEW PARAMETERS

This section is intended to define a set of recommended SLOTS (Scaling, Limit, Offset, and Transfer Function) which can be used when parameters are added to J1939. This permits data consistency to be maintained as much as possible between parameters of a given type (temperature, pressure, speed, etc.). Each SLOT is intended to provide a range and resolution suitable for most parameters within a given type. When necessary, a different scaling factor or offset can be used. All SLOTS should be based

on a power of 2 scaling from another SLOT. This will minimize the math required for any internal scaling and reduce the opportunity for misinterpreted values. Offsets should be selected preferably on the following basis:

- a. Offset = 0, or
- b. Offset = 50% (equal \pm range)

Appendix A defines the recommended SLOTS to be used when ranges are assigned to new parameters.

TABLE 1 - TRANSMITTED SIGNAL RANGES

Range Name	1 byte	2 bytes	4 bytes	ASCII
Valid Signal	0 to 250 00 ₁₆ to FA ₁₆	0 to 64 255 0000 ₁₆ to FAFF ₁₆	0 to 4 211 081 215 00000000 ₁₆ to FFFFFFFF ₁₆	1 to 254 01 ₁₆ to FE ₁₆
Parameter specific indicator	251 FB ₁₆	64 256 to 64 511 FB00 ₁₆ to FBFF ₁₆	4 211 081 216 to 4 227 858 431 FBxxxxxx ₁₆	none
Reserved range for future indicator bits	252 to 253 FC ₁₆ to FD ₁₆	64 512 to 65 023 FC00 ₁₆ to FDFF ₁₆	4 227 858 432 to 4 261 412 863 FC000000 ₁₆ to FDFFFFFF ₁₆	none
Error indicator	254 FE ₁₆	65 024 to 65 279 FExx ₁₆	4 261 412 864 to 4 278 190 079 FExxxxxx ₁₆	0 00 ₁₆
Not available or not requested	255 FF ₁₆	65 280 to 65 535 FFxx ₁₆	4 278 190 080 to 4 294 967 294 FFxxxxxx ₁₆	255 FF ₁₆

TABLE 2 - TRANSMITTED VALUES FOR DISCRETE PARAMETERS (MEASURED)

Range Name	Transmitted Value
Disabled (off, passive, etc.)	00
Enabled (on, active, etc.)	01
Error indicator	10
Not available or not installed	11

TABLE 3 - TRANSMITTED VALUES FOR CONTROL COMMANDS (STATUS)

Range Name	Transmitted Value
Command to disable function (turn off, etc.)	00
Command to enable function (turn on, etc.)	01
Reserved	10
Don't care/take no action (leave function as is)	11

5.1.6 ADDING PARAMETERS TO PARAMETER GROUPS

Several of the Parameter Groups contain bytes that are not defined and may be replaced with new parameters as appropriate. If existing parameter group definitions do not permit the inclusion of a new parameter, a new parameter group may be defined. Refer to SAE J1939 for additional definitions and abbreviations for instructions for adding new parameters to parameter groups and for requesting new parameter group numbers.

In general, parameters should be grouped into parameter groups as follows:

- a. By function (Oil, Coolant, Fuel, etc.) and not by type (temperature, pressure, speed, etc.)
- b. With similar update rates (to minimize unnecessary overhead)
- c. By common subsystem (the device likely to measure and send data)

5.1.7 TRANSMISSION REPETITION RATES (UPDATE RATES)

5.1.7.1 *Definition of Transmission Repetition Rate*

All transmission repetition rates defined in SAE J1939/71 are nominal rates. The actual transmission repetition rate on the network should be at this rate plus/minus the "typical" jitter which occurs in microcontroller based systems. The average rate should be the nominal value.

5.1.7.2 *Transmission Repetition Rate for Engine Speed and Directly Associated Data (Crank Angle or Time Based Update Rates)*

Some parameters may be calculated and/or updated based on engine crank angle rather than at a specific time interval. When this is the case the reference to a specific update rate is not accurate because this time will change based on the speed of the engine. The primary goal is to minimize the latency associated with sampling, calculating and transmitting the data without overburdening the network. There are many approaches to sampling the data to be converted and sent over the network. The two preferred approaches are: (a) Time-based sampling, calculating and transmission; and (b) A hybrid time-based and engine crank angle-based sampling, calculating and transmission where the number of crank angle degrees between updates is modified based on the current operating speed in order to maintain an update rate within an acceptable range (see Figure 1). Because there are multiple ways to acquire and transmit data onto the network the following guidelines have been defined for the engine speed and directly associated data.

1. At speeds above 500 rpm, the time from sampling to message transmission shall not exceed 12 ms. Systems that acquire engine speed information via period measurement inherently have less time delay at higher speeds. Above 1000 rpm, for instance, the time from sampling to message transmission shall range from 5 to 30 ms. Less time is required because the period measurement takes less time at higher speeds. How much time is saved depends on the number of crank angle degrees used to perform the period measurement.
2. "Normal" update rates:
 - a. Time based updates will occur every 20 ms.
 - b. Hybrid time based and engine crank angle based updates are shown in Figure 1

FIGURE 1—LIMITS OF HYBRID UPDATE RATES

5.1.8 NAMING CONVENTION FOR ENGINE PARAMETERS

When there are multiple instances of the same parameter on the same component (i.e., exhaust ports), the following naming convention will be used. While facing the engine from the flywheel housing, left bank (LB) parameters are assigned prior to the right bank (RB) parameters. Front parameters are assigned prior to the rear or back parameters (with the rear/back being the end containing the flywheel housing). For a six cylinder in-line engine, the position furthest from the flywheel will be identified as 1. For a 12 cylinder "V" engine, the position furthest from the flywheel on the left bank will be identified as 1, followed by the position next closest to the flywheel on the left bank. When only one parameter is required or available, the parameter denoted as number 1 should be used. (i.e., an engine having only one turbocharger would use Turbocharger 1 Compressor Inlet Temperature when broadcasting the temperature).

5.2 Parameter Definitions

This section provides a description of each parameter used for in the SAE J1939 network. The description includes data length, data type, resolution, range, and a tag (label) for reference.

After power on, a node should internally set the "availability bits" of received parameters as not available and operate with default values until valid data is received. When transmitting, undefined bytes should be sent as 255 (FF₁₆) and undefined bits should be sent as 1.

5.2.1 CONTROL PARAMETERS

5.2.1.1 *Net Brake Torque (Power)*

The measured torque (or power output) of a “fully equipped” engine. A fully equipped engine is an engine equipped with accessories necessary to perform its intended service. This includes, but is not restricted to, the basic engine, including fuel, oil, and cooling pumps, plus intake air system, exhaust system, cooling system, alternator, starter, emissions, and noise control. Accessories which are not necessary for the operation of the engine, but may be engine mounted, are not considered part of a fully equipped engine. These items include, but are not restricted to, power steering pump systems, vacuum pumps, and compressor systems for air conditioning, brakes, and suspensions. When these accessories are integral with the engine, the torque/power absorbed in an unloaded condition may be determined and added to the net brake torque. (Refer to SAE J1349.)

Net brake torque is calculated by subtracting friction torque from indicated torque for the purposes of this document.

5.2.1.2 *Friction Torque*

The torque required to drive the engine alone as “fully equipped.”

5.2.1.3 *Indicated Torque*

Indicated torque is the torque developed in the cylinders. It is defined as the sum of the net brake torque and friction torque.

5.3 Application Notes

5.3.1 PARAMETERS WITH MULTIPLE SOURCES

Each parameter received by a node for control purposes shall be configurable by the system integrator to identify the primary source of the data, as well as the secondary source, if applicable. It is to be expected that the system integrator configure each receiving device on a network identically.

5.4 Conventions for SPN Start Position and Unused Bits in Message Definitions

The purpose of this section is to explain the convention in the PGN definition for identify the position of parameters within the PGN data field. This section explains how to determine the bits occupied by the parameter data and how to deal with the unspecified bits in the data field definition.

5.4.1 SPN START POSITION AND THE DATA FIELD BITS OCCUPIED

The data field space occupied by a parameter is determined by the 'Starting Position' and 'Length' attributes listed next to the Parameter in the PGN definition. Each of the different Start Position conventions (indication techniques) used within the PGN definitions are explained in the tables below. The indication conventions are grouped according to whether the parameter data length is an integer number of bytes (1 byte, 2 byte, etc.), a fractional byte length (2 bits, 4 bits, 10 bits, etc.), or variable byte length.

Start Position	Length	Interpretation
R	Y byte	Indicates the parameter occupies the whole number of bytes starting with byte 'R'. Examples 3 1 byte: Parameter occupies byte 3 2 7 bytes: Parameter occupies bytes 2 through 8
R	8 bits	Indicates the parameter occupies all 8 bits of byte 'R'. Example 3 8 bits: Parameter occupies byte 3
R-S	Y bytes	Indicates the parameter occupies the 'Y' bytes from byte 'R' through byte 'S'. Examples 3-5 3 bytes: Parameter occupies bytes 3, 4, and 5 17-20 4 bytes: Parameter occupies bytes 17, 18, 19, and 20
R, S	Y bytes	Indicates the parameter occupies the 'Y' bytes from byte 'R' through byte 'S'. Example 3, 4 2 bytes: Parameter occupies bytes 3 and 4

TABLE 4 - CONVENTIONS FOR PARAMETERS WITH INTEGER BYTE LENGTH

Start Position	Length	Interpretation
R.x	Y bits	Indicates the parameter occupies 'Y' number of bits of byte 'R' starting at bit 'x' in byte 'R'. Examples 1.5 4 bits: Parameter occupies byte 1, bits 8-5 3.1 2 bits: Parameter occupies byte 3, bits 2-1
R.x-S	Y bits	Indicates the parameter occupies the most significant bits of byte 'R' from bit 'x' to bit 8 plus all whole bytes up to 'S'. Example (PGN 64982) 1.7-2 10 bits: Parameter occupies byte 1, bits 8-7 and all of byte 2 (where the least significant 2 bits are in byte 1 and the 8 most significant bits are in byte 2 (byte 2 bit 8 is most significant bit of the 10 bits))
R-S.x	Y bits	Indicates the parameter occupies all whole byte from 'R' up to 'S' and the remaining modulo-8 number of bits starting from bit 'x' in byte 'S'. Example (SPN 3169) 6, 7.1 12 bits: Parameter occupies byte 6 and byte 7, bits 4-1 (where 4 most significant bits at byte 7, bits 4-1 and least significant 8 bits in byte 6) Example (SPN 3036, J1939-73) 6-8.6 19 bits: Parameter occupies byte 6, 7 and byte 8, bits 8-6 (where 3 most significant bits at byte 8, bits 8-6 and least significant 8 bits in byte 6)

TABLE 5 - CONVENTIONS FOR PARAMETERS WITH FRACTIONAL BYTE LENGTHS

Start Position	Length	Interpretation
R-'N'	Variable – up to Y characters ("*" delimited)	Indicates the parameter starts at byte 'R' and continues through some variable number of bytes where the end is denoted by an asterisk character in the data stream. Example 2-N Variable - up to 200 characters ("*" delimited): Parameter starts at byte 2 and continues up to the asterisk character (at byte 202 at the highest)
R to 'N'	Variable – up to Y characters	Indicates the first parameter starts at byte 'R' and continues through some variable number of bytes to the end denoted by an asterisk. And indicates the second parameter starts at the first byte following the asterisk delimiter for the first parameter and continues through some variable number of bytes to the end denoted by an asterisk. Example (PGN 64958) 5 to A Variable - up to 100 characters: Parameter starts at byte 5 and continues up to the asterisk character (byte 105 at the highest) A+1 to B Variable - up to 100 characters: Parameter starts at first byte after the delimiter for the previous and continues up to the next asterisk character
'n'	Variable – up to Y characters ("*" delimited)	Indicates the parameter is the nth field and continues some variable number of bytes where the end is denoted by an asterisk character in the data stream. Example (PGN 64965) c Variable - up to 200 characters ("*" delimited): Parameter is the 3rd field and continues up to the asterisk character (200 bytes beyond start of 3rd field at the highest)
'n'	Y bytes	Indicates the parameter is sequentially field 'n' and occupies Y number of bytes from the point that the field starts. Example a 5 bytes: Parameter is the first field and consists of 5 bytes from the start of that field

TABLE 6 - CONVENTIONS FOR PARAMETERS WITH VARIABLE LENGTH AND FIELDS

5.4.2 UNSPECIFIED BITS IN THE PGN DATA FIELD DEFINITION

The J1939-71 PGN Definitions only list the data field bits and bytes that have parameter assignments. Any bits of the PGN data field that are not assigned to a parameter are not shown in the PGN definition. The 'Data Length' attribute of the PGN definition specifies the byte length of the data field for the PGN. Bits within this data field byte length that are not accounted for by the collection of parameters in the PGN are unspecified bits. When transmitted, the message data field for the transmitted PGN must be at least the minimum length specified by the 'Data Length' attribute. All unspecified bits within the transmitted message data length must be filled with a value of one (1). The unspecified bits are available for assignment to parameters at some future time.

5.4.2.1 Example using PGN 65213

The PGN Data Length and PGN data content for PGN 65213 are shown below. The 'Data Length' attribute for this PGN indicates the PGN has a message data field length of 8 bytes. Only 28 bits of the message data field have data assignments – byte 1, bits 4-1 of byte 2, byte 3 and byte 4. There are 36 unspecified bits in the message – bits 8-5 of byte 2 and bytes 5-8. When transmitted, the message data field for this PGN must be 8 bytes in length. The 36 unspecified bits must be filled each with a one (1) and the assigned 28 bits must be filled appropriately.

PGN 65213 Fan Drive – FD

Data Length: 8

Start Position	Length	Parameter Name	SPN
1	1 byte	Estimated Percent Fan Speed	975
2.1	4 bits	Fan Drive State	977
3-4	2 bytes	Fan Speed	1639

Byte 1								Byte 2								Byte 3								Byte 4							
8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1
SPN 975								1	1	1	1	SPN 977				SPN 1639															

Byte 5								Byte 6								Byte 7								Byte 8							
8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1	8	7	6	5	4	3	2	1
1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1	1

APPENDIX B

SPNs

SPN 16 ***Engine Fuel Filter (Suction Side) Differential Pressure (see also SPN 1382)***

Differential pressure measured across the fuel filter located between the fuel tank and the supply pump. See Figures SPN16_A & SPN16_B.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 16

PGN reference:

SPN 21 **Engine ECU Temperature (use SPN 1136)**

Temperature of the engine electronic control unit.

(21, 1207 are not to be used - obsolete)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 22 ***Engine Extended Crankcase Blow-by Pressure***

Differential crankcase blow-by pressure as measured through a tube with a venturi.

(1264 not to be used – obsolete)

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 29 Accelerator Pedal Position 2

The ratio of actual position of the second analog engine speed/torque request input device (such as an accelerator pedal or throttle lever) to the maximum position of the input device. This parameter is intended for secondary accelerator control in an application. If an application has only one accelerator control, use SPN 91.

In marine applications, this will typically be the operator's second throttle lever.

If a low idle validation switch is used in conjunction with accelerator pedal position 2, use Accelerator Pedal Low Idle Switch 2, SPN 2970.

NOTE—See SPNs 91, 28, and 974 for additional accelerator position parameters.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61443

SPN 39 *Tire Pressure Check Interval*

The interval at which the system will check the tire pressures (e.g., 5, 10, 15 min.).

NOTE - A value of 0 indicates continuous (real time) pressure readings.

Data Length: 1 byte

Resolution: 1 min/bit, 0 offset

Data Range: 0 to 250 mins

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 46 *Pneumatic Supply Pressure*

The pneumatic pressure in the main reservoir, sometimes referred to as the wet tank.

Data Length: 1 byte

Resolution: 8 kPa/bit, 0 offset

Data Range: 0 to 2,000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65198

SPN 51 *Engine Throttle Position*

The position of the valve used to regulate the supply of a fluid, usually air or fuel/air mixture, to an engine. 0% represents no supply and 100% is full supply.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65266

SPN 52 *Engine Intercooler Temperature*

Temperature of liquid found in the intercooler located after the turbocharger.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 53 *Transmission Synchronizer Clutch Value*

The current modulated value for the air supply to the synchronizer clutch.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65221

SPN 54 *Transmission Synchronizer Brake Value*

The current modulated value for the air supply to the synchronizer brake.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65221

SPN 59 *Transmission Shift Finger Gear Position*

The current position of the shift finger in the gear direction.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65223

SPN 60 *Transmission Shift Finger Rail Position*

The current position of the shift finger in the rail direction.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65223

SPN 69 *Two Speed Axle Switch*

Switch signal which indicates the current axle range.

00 - Low speed range
01 - High speed range
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 70 *Parking Brake Switch*

Switch signal which indicates when the parking brake is set. In general the switch actuated by the operator's park brake control, whether a pedal, lever or other control mechanism. (See also SPN 619)

00 - Parking brake not set
01 - Parking brake set
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 72 *Engine Blower Bypass Valve Position*

Relative position of the blower bypass valve.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65277

SPN 73 *Auxiliary Pump Pressure*

Gage pressure of auxiliary water pump driven as a PTO device.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65278

SPN 74 *Maximum Vehicle Speed Limit*

Maximum vehicle velocity allowed.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65261

SPN 75 *Steering Axle Temperature*

Temperature of lubricant in steering axle.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 79 *Road Surface Temperature*

Indicated temperature of road surface over which vehicle is operating.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65269

SPN 80 *Washer Fluid Level*

Ratio of volume of liquid to total container volume of fluid reservoir in windshield wash system.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65276

SPN 81 Engine Particulate Trap Inlet Pressure

Exhaust back pressure as a result of particle accumulation on filter media placed in the exhaust stream.

Data Length: 1 byte

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 125 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 82 Engine Air Start Pressure

Gage pressure of air in an engine starting system that utilizes compressed air to provide the force required to rotate the crankshaft.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65246

SPN 84 Wheel-Based Vehicle Speed

Speed of the vehicle as calculated from wheel or tailshaft speed.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 86 Cruise Control Set Speed

Value of set (chosen) velocity of velocity control system.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 87 Cruise Control High Set Limit Speed

Maximum vehicle velocity at which cruise can be set.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65261

SPN 88 Cruise Control Low Set Limit Speed

Minimum vehicle velocity at which cruise can be set or minimum vehicle velocity for cruise operation before it will exit cruise control operation.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65261

SPN 90 Power Takeoff Oil Temperature

Temperature of lubricant in device used to transmit engine power to auxiliary equipment.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65264

SPN 91 Accelerator Pedal Position 1

The ratio of actual position of the analog engine speed/torque request input device (such as an accelerator pedal or throttle lever) to the maximum position of the input device. This parameter is intended for the primary accelerator control in an application. If an application has only one accelerator control, use SPN 91.

For on-highway vehicles, this will typically be the operator's accelerator pedal. Although it is used as an input to determine powertrain demand, it also provides anticipatory information to transmission and ASR algorithms about driver actions.

In marine applications, this will typically be the operator's throttle lever.

If a low idle validation switch is used in conjunction with accelerator pedal position 1, use Accelerator Pedal Low Idle Switch 1, SPN 558.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61443

SPN 92 Engine Percent Load At Current Speed

The ratio of actual engine percent torque (indicated) to maximum indicated torque available at the current engine speed, clipped to zero torque during engine braking.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: 0 to 125%

Type: Status

Supporting information:

PGN reference: 61443

SPN 94 Engine Fuel Delivery Pressure

Gage pressure of fuel in system as delivered from supply pump to the injection pump. See Figures SPN16_A & SPN16_B.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 95 Engine Fuel Filter Differential Pressure

Change in fuel delivery pressure, measured across the filter, due to accumulation of solid or semisolid matter on the filter element. See Figures SPN16_A & SPN16_B.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65276

SPN 96 Fuel Level

Ratio of volume of fuel to the total volume of fuel storage container.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65276

SPN 97 *Water In Fuel Indicator*

Signal which indicates the presence of water in the fuel.

00 - No
01 - Yes
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65279

SPN 98 *Engine Oil Level*

Ratio of current volume of engine sump oil to maximum required volume.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 99 *Engine Oil Filter Differential Pressure*

Change in engine oil pressure, measured across the filter, due to the filter and any accumulation of solid or semisolid material on or in the filter.

Data Length: 1 byte

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 125 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65276

SPN 100 *Engine Oil Pressure*

Gage pressure of oil in engine lubrication system as provided by oil pump.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 101 *Engine Crankcase Pressure*

Gage pressure inside engine crankcase.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 102 *Engine Turbocharger Boost Pressure*

Gage pressure of air measured downstream on the compressor discharge side of the turbocharger. See also SPNs 1127-1130 for alternate range and resolution. If there is one boost pressure to report and this range and resolution is adequate, this parameter should be used.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 103 *Engine Turbocharger 1 Speed*

Rotational velocity of rotor in the turbocharger.

Data Length: 2 bytes

Resolution: 4 rpm/bit, 0 offset

Data Range: 0 to 257,020 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65245

SPN 104 *Engine Turbocharger Lube Oil Pressure 1*

Gage pressure of oil in turbocharger lubrication system.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65245

SPN 105 *Engine Intake Manifold 1 Temperature*

Temperature of pre-combustion air found in intake manifold of engine air supply system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 106 *Engine Air Inlet Pressure*

Absolute air pressure at inlet to intake manifold or air box.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 107 *Engine Air Filter 1 Differential Pressure*

Change in engine air system pressure, measured across the filter, due to the filter and any accumulation of solid foreign matter on or in the filter.

This is the measurement of the first filter in a multiple air filter system. In a single air filter application, this is the only SPN used. Filter numbering follows the guidelines noted in section, Naming Convention For Engine Parameters.

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 108 *Barometric Pressure*

Absolute air pressure of the atmosphere. See Figures SPN16_A & SPN16_B.

Data Length: 1 byte

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 125 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65269

SPN 109 Engine Coolant Pressure

Gage pressure of liquid found in engine cooling system.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 110 Engine Coolant Temperature

Temperature of liquid found in engine cooling system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 111 Engine Coolant Level

Ratio of volume of liquid found in engine cooling system to total cooling system volume. Typical monitoring location is in the coolant expansion tank.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65263

SPN 112 Engine Coolant Filter Differential Pressure

Change in coolant pressure, measured across the filter, due to the filter and any accumulation of solid or semisolid matter on or in the filter.

Data Length: 1 byte

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 125 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 114 *Net Battery Current*

Net flow of electrical current into/out of the battery or batteries.

Data Length: 1 byte

Resolution: 1 A/bit, -125 A offset

Data Range: -125 to 125 A

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65271

SPN 115 *Alternator Current*

Measure of electrical current flow from the alternator. Alternator Current (High Range/Resolution) parameter SPN 1795 has a higher range and resolution of the same parameter.

Data Length: 1 byte

Resolution: 1 A/bit, 0 offset

Data Range: 0 to 250 A

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65271

SPN 116 *Brake Application Pressure*

Gage pressure of compressed air or fluid in vehicle braking system measured at the brake chamber when brake shoe (or pad) is placed against brake drum (or disc).

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65274

SPN 117 *Brake Primary Pressure*

Gage pressure of air in the primary, or supply side, of the air brake system.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65274

SPN 118 *Brake Secondary Pressure*

Gage pressure of air in the secondary, or service side, of the air brake system.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65274

SPN 119 *Hydraulic Retarder Pressure*

Gage pressure of oil in hydraulic retarder system.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65275

SPN 120 *Hydraulic Retarder Oil Temperature*

Temperature of oil found in a hydraulic retarder.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65275

SPN 123 *Clutch Pressure*

Gage pressure of oil within a wet clutch.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 124 *Transmission Oil Level*

Ratio of volume of transmission sump oil to recommended volume.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 126 *Transmission Filter Differential Pressure*

Change in transmission fluid pressure, measured after the filter, due to accumulation of solid or semisolid material on or in the filter.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 127 *Transmission Oil Pressure*

Gage pressure of lubrication fluid in transmission, measured after pump.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 129 *Engine Injector Metering Rail 2 Pressure (duplicate, use SPN 1349)*

The gage pressure of fuel in the metering rail #2 as delivered from the supply pump to the injector metering inlet. See Figure SPN16_A for fuel system related parameters. Although the figure does not show rail #2 it does show the relationship of rail pressure to other signals.

(Obsolete - use SPN 1349)

Data Length: 2 bytes

Resolution: 1/256 MPa/bit, 0 offset

Data Range: 0 to 251 Mpa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 132 *Engine Inlet Air Mass Flow Rate*

Mass flow rate of fresh air entering the engine air intake, before any EGR mixer, if used. Flow rate of fresh air conducted to the engine cylinders to support combustion.

Data Length: 2 bytes

Resolution: 0.05 kg/h per bit, 0 offset

Data Range: 0 to 3212.75 kg/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61450

SPN 136 *Auxiliary Vacuum Pressure Reading*

Identifies the current vacuum pressure (relative to atmosphere) that is configured uniquely per application. Not to be used in place of defined parameters.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65143

SPN 137 *Auxiliary Gage Pressure Reading 1*

Identifies the current gage pressure (relative to atmosphere) that is configured uniquely per application. Not to be used in place of defined parameters.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65143

SPN 138 *Auxiliary Absolute Pressure Reading*

Identifies the current absolute pressure (relative to 0 pressure) that is configured uniquely per application. Not to be used in place of defined parameters.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65143

SPN 141 *Trailer, Tag Or Push Channel Tire Pressure Target*

The tire pressure control system's target gage pressure for the trailer, tag, or push group of tires.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65145

SPN 142 *Drive Channel Tire Pressure Target*

The tire pressure control system's target gage pressure for the drive group of tires.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65145

SPN 143 *Steer Channel Tire Pressure Target*

The tire pressure control system's target gage pressure for the steer group of tires.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65145

SPN 144 *Trailer, Tag Or Push Channel Tire Pressure*

The latest gage pressure reading of the trailer, tag, or push group of tires, as opposed to the pressure in each tire.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65146

SPN 145 *Drive Channel Tire Pressure*

The latest gage pressure reading of the drive group of tires, as opposed to the pressure in each tire.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65146

SPN 146 *Steer Channel Tire Pressure*

The latest gage pressure reading of the steer group of tires, as opposed to the pressure in each tire.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65146

SPN 156 *Engine Injector Timing Rail 1 Pressure*

The gage pressure of fuel in the timing rail delivered from the supply pump to the injector timing inlet. See Figure SPN16_A.

Data Length: 2 bytes

Resolution: 1/256 MPa/bit, 0 offset

Data Range: 0 to 251 Mpa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65243

SPN 157 *Engine Injector Metering Rail 1 Pressure*

The gage pressure of fuel in the primary, or first, metering rail as delivered from the supply pump to the injector metering inlet. See Figure SPN16_A.

Data Length: 2 bytes

Resolution: 1/256 MPa/bit, 0 offset

Data Range: 0 to 251 Mpa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65243

SPN 158 *Battery Potential (Voltage), Switched*

Electrical potential measured at the input of the electronic control unit supplied through a switching device.

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65271

SPN 159 *Engine Gas Supply Pressure*

Gage pressure of gas supply to fuel metering device.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65277

SPN 160 *Main Shaft Speed*

Rotational velocity of the first intermediate shaft of the transmission.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 161 *Transmission Input Shaft Speed*

Rotational velocity of the primary shaft transferring power into the transmission. When a torque converter is present, it is the output of the torque converter.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61442

SPN 162 *Transmission Requested Range*

Range selected by the operator. Characters may include P, Rx, Rx-1...R2, R1, R, Nx, Nx-1...N2, N1, N, D, D1, D2..., Dx, L, L1, L2..., Lx-1, 1, 2, 3,... If only one displayed character is required, the second character shall be used and the first character shall be a space (ASCII 32) or a control character (ASCII 0 to 31). If the first character is a control character, refer to the manufacturer's application document for definition.

Data Length: 2 bytes

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61445

SPN 163 *Transmission Current Range*

Range currently being commanded by the transmission control system. Characters may include P, Rx, Rx-1...R2, R1, R, Nx, Nx-1...N2, N1, N, D, D1, D2..., Dx, L, L1, L2..., Lx-1, 1, 2, 3,... If only one displayed character is required, the second character shall be used and the first character shall be a space (ASCII 32) or a control character (ASCII 0 to 31). If the first character is a control character, refer to the manufacturer's application document for definition.

Data Length: 2 bytes

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61445

SPN 164 *Engine Injection Control Pressure*

The gage pressure of the engine oil in the hydraulic accumulator that powers an intensifier used for fuel injection.

Data Length: 2 bytes

Resolution: 1/256 MPa/bit, 0 offset

Data Range: 0 to 251 Mpa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65243

SPN 165 *Compass Bearing*

Present compass bearing of vehicle.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, 0 offset

Data Range: 0 to 501.99 deg

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65256

SPN 166 *Engine Rated Power*

Net brake power that the engine will deliver continuously, specified for a given application at a rated speed.

Data Length: 2 bytes

Resolution: 0.5 kW/bit, 0 offset

Data Range: 0 to 32,127.5 kW

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65214

SPN 167 (R) *Charging System Potential (Voltage)*

Electrical potential measured at the charging system output. The charging system may be any device charging the batteries. This includes alternators, generators, solid state charger and other charging devices.

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65271

SPN 168 *Electrical Potential (Voltage)*

Measured electrical potential of the battery.

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65271

SPN 169 *Cargo Ambient Temperature*

Temperature of air inside vehicle container used to accommodate cargo.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65276

SPN 170 *Cab Interior Temperature*

Temperature of air inside the part of the vehicle that encloses the driver and vehicle operating controls.

Note: See SPN 1662 and SPN 1691.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65269

SPN 171 *Ambient Air Temperature*

Temperature of air surrounding vehicle.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65269

SPN 172 *Engine Air Inlet Temperature*

Temperature of air entering vehicle air induction system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65269

SPN 173 *Engine Exhaust Gas Temperature*

Temperature of combustion byproducts leaving the engine. See SPNs 2433 and 2434 for engines with more than one exhaust gas temperature measurement.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65270

SPN 174 (R) Engine Fuel Temperature 1

Temperature of fuel (or gas) passing through the first fuel control system. See SPN 3468 for the second control system

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 175 Engine Oil Temperature 1

Temperature of the engine lubricant.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 176 Engine Turbocharger Oil Temperature

Temperature of the turbocharger lubricant.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 177 Transmission Oil Temperature

Temperature of the transmission lubricant.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 180 *Trailer Weight*

Total mass of freight-carrying vehicle designed to be pulled by truck, including the weight of the contents.

Data Length: 2 bytes

Resolution: 2 kg/bit, 0 offset

Data Range: 0 to 128,510 kg

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65258

SPN 181 *Cargo Weight*

The mass of freight carried.

Data Length: 2 bytes

Resolution: 2 kg/bit, 0 offset

Data Range: 0 to 128,510 kg

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65258

SPN 182 *Engine Trip Fuel*

Fuel consumed during all or part of a journey.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65257

SPN 183 *Engine Fuel Rate*

Amount of fuel consumed by engine per unit of time.

Data Length: 2 bytes

Resolution: 0.05 L/h per bit, 0 offset

Data Range: 0 to 3,212.75 L/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65266

SPN 184 *Engine Instantaneous Fuel Economy*

Current fuel economy at current vehicle velocity.

Data Length: 2 bytes

Resolution: 1/512 km/L per bit, 0 offset

Data Range: 0 to 125.5 km/L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65266

SPN 185 *Engine Average Fuel Economy*

Average of instantaneous fuel economy for that segment of vehicle operation of interest.

Data Length: 2 bytes

Resolution: 1/512 km/L per bit, 0 offset

Data Range: 0 to 125.5 km/L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65266

SPN 186 *Power Takeoff Speed*

Rotational velocity of device used to transmit engine power to auxiliary equipment.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65264

SPN 187 *Power Takeoff Set Speed*

Rotational velocity selected by operator for device used to transmit engine power to auxiliary equipment.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65264

SPN 188 *Engine Speed At Idle, Point 1 (Engine Configuration)*

Stationary low idle speed of engine which includes influences due to engine temperature (after power up) and other stationary changes (calibration offsets, sensor failures, etc). This parameter is point 1 of the engine configuration map (see PGN 65251).

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65251

SPN 189 *Engine Rated Speed*

The maximum governed rotational velocity of the engine crankshaft under full load conditions. Note that the engine speed at point 2 (SPN 528) is equal to rated engine speed only in the case when the engine has not been derated. Please also reference PGN 65251.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65214

SPN 190 *Engine Speed*

Actual engine speed which is calculated over a minimum crankshaft angle of 720 degrees divided by the number of cylinders.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61444

SPN 191 *Transmission Output Shaft Speed*

Calculated speed of the transmission output shaft.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61442

SPN 233 *Unit Number (Power Unit)*

Owner assigned unit number for the power unit of the vehicle.

NOTE: The ASCII character "*" is reserved as a delimiter.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65259

SPN 234 *Software Identification*

Software identification of an electronic module. As an example, this parameter may be represented with ASCII characters MMDDYYaa where MM is the month, DD is the day, YY is the year, and aa is the revision number.

NOTE The ASCII character "*" is reserved as a delimiter.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65242

SPN 235 *Engine Total Idle Hours*

Accumulated time of operation of the engine while under idle conditions.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65244

SPN 236 *Engine Total Idle Fuel Used*

Accumulated amount of fuel used during vehicle operation while under idle conditions.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65244

SPN 237 *Vehicle Identification Number*

Vehicle Identification Number (VIN) as assigned by the vehicle manufacturer.

NOTE The ASCII character "*" is reserved as a delimiter.

Data Length: Variable - up to 200 characters ("*" delimited)
Resolution: ASCII, 0 offset
Data Range: 0 to 255 per byte Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65260

SPN 241 *Tire Pressure*

Pressure at which air is contained in cavity formed by tire and rim.

Data Length: 1 byte
Resolution: 4 kPa/bit, 0 offset
Data Range: 0 to 1000 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65268

SPN 242 *Tire Temperature*

Temperature at the surface of the tire sidewall.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65268

SPN 244 *Trip Distance*

Distance traveled during all or part of a journey.

NOTE See SPN 918 for alternate resolution.

Data Length: 4 bytes
Resolution: 0.125 km/bit, 0 offset
Data Range: 0 to 526,385,151.9 km Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65248

SPN 245 *Total Vehicle Distance*

Accumulated distance traveled by vehicle during its operation.

NOTE See SPN 917 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65248

SPN 246 *Total Vehicle Hours*

Accumulated time of operation of vehicle.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65255

SPN 247 *Engine Total Hours of Operation*

Accumulated time of operation of engine.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65253

SPN 248 *Total Power Takeoff Hours*

Accumulated time of operation of power takeoff device.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65255

SPN 249 *Engine Total Revolutions*

Accumulated number of revolutions of engine crankshaft during its operation.

Data Length: 4 bytes

Resolution: 1000 r/bit, 0 offset

Data Range: 0 to 4,211,081,215,000 r Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65253

SPN 250 *Engine Total Fuel Used*

Accumulated amount of fuel used during vehicle operation.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65257

SPN 411 *Engine Exhaust Gas Recirculation Differential Pressure*

Differential pressure across the Exhaust Gas Recirculation (EGR) system

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65188

SPN 412 Engine Exhaust Gas Recirculation Temperature

Temperature of Recirculated Exhaust Gas

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65188

SPN 441 Auxiliary Temperature 1

Temperature measured by auxiliary temperature sensor #1. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65164

SPN 442 Auxiliary Temperature 2

Temperature measured by auxiliary temperature sensor #2. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65164

SPN 444 Battery 2 Potential (Voltage)

The voltage for isolated battery #2.

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65165

SPN 509 Milepost Identification

Used to identify the milepost as detected by a milepost sensor

Data Length: Variable - up to 100 characters

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64959

SPN 512 Driver's Demand Engine - Percent Torque

The requested torque output of the engine by the driver. It is based on input from the following requestors external to the powertrain: operator (via the accelerator pedal), cruise control and/or road speed limit governor. Dynamic commands from internal powertrain functions such as smoke control, low- and high-speed engine governing; ASR and shift control are excluded from this calculation. The data is transmitted in indicated torque as a percent of the reference engine torque. See PGN 65251 for the engine configuration message. Several status bits are defined separately to indicate the request which is currently being honored. This parameter may be used for shift scheduling.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: 0 to 125%

Type: Measured

Supporting information: See Appendix D - SPN 512

PGN reference: 61444

SPN 513 Actual Engine - Percent Torque

The calculated output torque of the engine. The data is transmitted in indicated torque as a percent of reference engine torque (see the engine configuration message, PGN 65251). The engine percent torque value will not be less than zero and it includes the torque developed in the cylinders required to overcome friction.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: 0 to 125%

Type: Measured

Supporting information:

PGN reference: 61444

SPN 514 *Nominal Friction - Percent Torque*

The calculated torque that indicates the amount of torque required by the basic engine itself added by the loss torque of accessories. It contains the frictional and thermodynamic loss of the engine itself, and the losses of fuel, oil and cooling pumps. The data is transmitted in indicated torque as a percent of reference engine torque (see the engine configuration message, PGN 65251).

The realization can be done by a map dependent on engine speed and engine temperature and an offset value for additional loss torques.

See SPN 2978 for an indicator that describes the possible inclusion of engine parasitic losses such as cooling fan, etc. in this parameter value.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Status

Supporting information:

PGN reference: 65247

SPN 515 *Engine's Desired Operating Speed*

An indication by the engine of the optimal operating speed of the engine for the current existing conditions. These conditions may include the torque generated to accommodate powertrain demands from the operator (via the accelerator pedal), cruise control, road speed limit governors, or ASR. Dynamic commands from functions such as smoke control or shift control are excluded from this calculation.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: (upper byte resolution = 32 rpm/bit)

Type: Status

Supporting information:

PGN reference: 65247

SPN 517 *Navigation-Based Vehicle Speed*

Speed of the vehicle as calculated from a device such as a Global Positioning System (GPS).

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65256

SPN 518 *Engine Requested Torque/Torque Limit*

Parameter provided to the engine or retarder in the torque/speed control message for controlling or limiting the output torque.

Requested torque to the engine is measured in indicated torque as a percentage of reference engine torque (see the engine configuration message, PGN 65251). This is the engine torque at which the engine is expected to operate if the torque control mode is active or the engine torque which the engine is not expected to exceed if the torque limit mode is active.

Zero torque can be requested which implies zero fuel and, according to Figures SPN512_A and SPN512_B, the engine will not be allowed to stall. The actual engine percent torque (SPN 513) should be zero and the engine should decelerate until the low idle governor kicks in, at which time the actual engine percent torque will be calculated as shown in Figures SPN512_A and SPN512_B and the engine torque mode bits (SPN 899) should be equal to 0000b - Low Idle Governor.

Requested torque to the retarder is measured in indicated torque as a percentage of reference retarder torque (see the retarder configuration message, PGN 65249). The logic used in enabling or disabling the retarder is based on the override control mode priority bits (SPN 897).

A zero torque request to the retarder is a disable request, and is used by a J1939 node to prevent the retarder from being activated by other combinations of inputs outside of J1939 commands. The Torque Limit Mode is commonly used for this purpose.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: 0 to 125% engine torque requests, -125% to 0% for retarder torque requests
Type: Status
Supporting information: See Appendix D - SPN 518
PGN reference: 0

SPN 519 *Engine's Desired Operating Speed Asymmetry Adjustment*

This byte is utilized in transmission gear selection routines and indicates the engine's preference of lower versus higher engine speeds should its desired speed not be achievable. This is a scaled ratio such that 125 represents an equal preference for a speed lower or higher than the engine's indicated desired speed. The higher the asymmetry adjustment value is above 125, the more the engine prefers to be operated at or above its indicated desired speed. Conversely, the lower the asymmetry adjustment value is below 125, the more the engine prefers to operate at or below its indicated desired speed. Typically, the engine's asymmetry adjustment will be predicated on fuel consumption considerations, and under these conditions, the method for computing the asymmetry adjustment is indicated in Figure SPN519_A. The engine may include other factors into its asymmetry adjustment calculation such as temperatures, pressures, and other operating parameters.

Data Length: 1 byte
Resolution: 1/bit, 0 offset
Data Range: 0 to 250 Operational Range: same as data range
Type: Status
Supporting information: See Appendix D - SPN 519
PGN reference: 65247

SPN 520 *Actual Retarder - Percent Torque*

Actual braking torque of the retarder as a percent of retarder configuration reference torque SPN 556.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125% to 0 %
Type: Measured
Supporting information:
PGN reference: 61440

SPN 521 Brake Pedal Position

Ratio of brake pedal position to maximum pedal position. Used for electric brake applications. 0% means no braking. Also when there are two brake pedals on the machine (Left Brake Pedal Position SPN 3033 and Right Brake Pedal Position SPN 3032) the maximum of the two should be transmitted for Brake Pedal Position.

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61441

SPN 522 Percent Clutch Slip

Parameter which represents the ratio of input shaft speed to current engine speed (in percent).

Percent Clutch Slip = $((\text{Engine rpm} - \text{Input shaft rpm}) / (\text{Engine rpm})) \times 100$

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61442

SPN 523 Transmission Current Gear

The gear currently engaged in the transmission or the last gear engaged while the transmission is in the process of shifting to the new or selected gear. Transitions toward a destination gear will not be indicated. Once the selected gear has been engaged then Transmission Current Gear (SPN 525) will reflect that gear.

Data Length: 1 byte
Resolution: 1 gear value/bit, -125 offset
Data Range: -125 to 125 Operational Range: -125 to +125, negative values are reverse gears, positive values are forward gears, zero is neutral. 251 (0xFB) is park.
Type: Measured
Supporting information:
PGN reference: 61445

SPN 524 Transmission Selected Gear

The gear that the transmission will attempt to achieve during the current shift if a shift is in progress, or the next shift if one is pending (i.e., waiting for torque reduction to initiate the shift).

Data Length: 1 byte
Resolution: 1 gear value/bit, -125 offset
Data Range: -125 to 125 Operational Range: -125 to +125, negative values are reverse gears, positive values are forward gears, zero is neutral. 251 (0xFB) is park.
Type: Status
Supporting information:
PGN reference: 61445

SPN 525 *Transmission Requested Gear*

Gear requested by the operator, ABS, or engine.

Negative values are reverse gears, positive values are forward gears, zero is neutral, parameter specific indicators are listed below.

Parameter specific values for this parameter are as follows:

0xFD (253 dec) = Hold current gear
0xFC (252 dec) = Forward Drive Position
0xFB (251 dec) = 'Park' position
0xFA (250 dec) = Forward 'Low' position
0xF9 (249 dec) = Upshift 1 gear from current position
0xF8 (248 dec) = Upshift 2 gears from current position
0xF7 (247 dec) = Downshift 1 gear from current position
0xF6 (246 dec) = Downshift 2 gears from current position
0xF5 (245 dec) = D-1: 1st forward selector position referenced from 'Drive'
0xF4 (244 dec) = D-2: 2nd forward selector position referenced from 'Drive'
0xF3 (243 dec) = D-3: 3rd forward selector position referenced from 'Drive'
0xF2 (242 dec) = D-4: 4th forward selector position referenced from 'Drive'
0xF1 (241 dec) = D-5: 5th forward selector position referenced from 'Drive'
0xF0 (240 dec) = D-6: 6th forward selector position referenced from 'Drive'
0xEF (239 dec) = D-7: 7th forward selector position referenced from 'Drive'
0xEE (238 dec) = Between two shift selector positions (if detail is unknown)
0xED (237 dec) = Between two reverse shift selector positions
0xEC (236 dec) = Between two forward shift selector positions
0xEB (235 dec) = Between D-7 and D-6 shift selector positions
0xEA (234 dec) = Between D-6 and D-5 shift selector positions
0xE9 (233 dec) = Between D-5 and D-4 shift selector positions
0xE8 (232 dec) = Between D-4 and D-3 shift selector positions
0xE7 (231 dec) = Between D-3 and D-2 shift selector positions
0xE6 (230 dec) = Between D-2 and D-1 shift selector positions
0xE5 (229 dec) = Between D-1 and 'Drive' shift selector positions
0xE4 (228 dec) = Between 'Drive' and 'Neutral' shift selector positions
0xE3 (227 dec) = Between 'Neutral' and 'Reverse' shift selector positions
0xE2 (226 dec) = Between 'Reverse' and 'Park' shift selector positions
0xE1 (225 dec) = Press of momentary button to reselect current position
0xE0 (224 dec) = Position unknown and/or no buttons pressed
0xDF (223 dec) = Reverse Selector Position

0xDE - 0xBE (222 dec - 190 dec) = Reserved

0x3C - 0x00 (60 dec - 0 dec) = Reserved

Forward selector position from drive (0xF5 to 0xEF) – Indicates shift selector position in reference to the 'Drive' position on the selector. It is possible that the shift selector software may not know the number of forward ranges. The shift selector may identify the position selected by the operator while the transmission ECU determines what range or gear that represents. If there is a digital display, the transmission ECU would communicate what is to be displayed via another message such as ETC#2 or ETC#7.

For example: Consider a vehicle with a 5-speed automatic transmission with the shift lever on the column. Suppose that shift selector has a limited number of positions, such that having positions for D-4-3-2-1 is not an option. For this example, assume there are only have enough lever positions for D-3-2-1. Pulling the lever into "D" will put the transmission in 5th (highest gear). It is desired that pulling the lever to the physical "3" position will limit the transmission to a maximum range of 3rd gear.

When the selector is pulled down into "3", the shifter selector itself has no way of correlating this physical lever position to the desired gear; it would have to be calibrated with software to tell it this information. If not calibrated, the shift selector cannot directly command the transmission to go to 3rd gear; it only knows it's one notch below drive.

However, if "D-1" (lever position, as opposed to desired gear) is broadcast by the selector, the transmission ECU can receive this and then make the determination of what range is desired. The benefit is that no specific calibration of the shift selector is required.

Between selector positions (0xEE to 0xE2) – Indicates the shift selector is not in an appropriate position. If a lever-type shift selector with a mechanical display is stuck between detents, it may appear to the operator that it is in the desired position when in fact it is not. The shift selector may be capable of reporting only that it is between positions or that it is between forward or

reverse positions. If known, the transmission ECU may respond differently depending on which positions are involved.

Reselect current position (0xE1) - If the TC1 message continues to send the position last selected, then a capability to reselect the same position is required. For example: If a 'Neutral to Drive' shift is selected and that shift is inhibited (say for high engine speed), it may be necessary for the operator to reselect 'Drive' after the inhibit conditions pass in order for the transmission ECU to honor the request.

Position unknown and/or no buttons pressed (0xE0) - A push-button style shift selector with momentary contact buttons may send this indicator after initialization before any buttons are pressed, or before the transmission ECU determines and communicates the initial selection. This indicator could also be sent between button presses as an alternative to sending the last button press.

Data Length: 1 byte

Resolution: 1 gear value/bit, -125 offset

Data Range: -125 to 125 Operational Range: -64 to 64

Type: Status

Supporting information:

PGN reference: 256

SPN 526 *Transmission Actual Gear Ratio*

Actual ratio of input shaft speed to output shaft speed.

Data Length: 2 bytes

Resolution: 0.001/bit, 0 offset

Data Range: 0 to 64.255 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61445

SPN 527 *Cruise Control States*

This parameter is used to indicate the current state, or mode, of operation by the cruise control device. This is a status parameter.

000 - Off/Disabled

001 - Hold

010 - Accelerate

011 - Decelerate

100 - Resume

101 - Set

110 - Accelerator Override

111 - Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7 Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 527

PGN reference: 65265

SPN 528 Engine Speed At Point 2 (Engine Configuration)

Engine speed of point 2 of the engine torque map (see PGN 65251 and supporting document). In engine configuration mode 1 and 3, point 2 is defined as the kick-in point from which torque is reduced to zero. In mode 2 (see Table PGN65251_A), there are no special requirements for the definition of this point.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 529 Engine Speed At Point 3 (Engine Configuration)

Engine speed of point 3, 4, and 5 of the engine torque map (see PGN 65251 and supporting document). It is recommended that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 are optional and lie between idle and point 2.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 530 Engine Speed At Point 4 (Engine Configuration)

Engine speed of point 3, 4, and 5 of the engine torque map (see PGN 65251 and supporting document). It is recommended that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 are optional and lie between idle and point 2.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 531 Engine Speed At Point 5 (Engine Configuration)

Engine speed of point 3, 4, and 5 of the engine torque map (see PGN 65251 and supporting document). It is recommended that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 are optional and lie between idle and point 2.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 532 Engine Speed At High Idle, Point 6 (Engine Configuration)

Engine speed of high idle (point 6) of the engine torque map (see PGN 65251 and supporting document). In engine configuration mode 3 (see Figure PGN65251_C), point 6 is not defined by the engine torque map but by the governor characteristic and the zero torque line.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 533 Engine Maximum Momentary Override Speed, Point 7 (Engine Configuration)

The maximum engine speed above high idle allowed by the engine control during a momentary high idle override. This duration of the override is limited by the maximum momentary override time limit, SPN 534.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 534 Engine Maximum Momentary Override Time Limit (Engine Configuration)

The maximum time limit allowed to override the engine's high idle speed.

Data Length: 1 byte
Resolution: 0.1 s/bit, 0 offset
Data Range: 0 to 25 s Operational Range: 0 to 25 sec, 0 = no override of high idle allowed, 255 = not applicable (no time restriction)
Type: Measured
Supporting information:
PGN reference: 65251

SPN 535 Engine Requested Speed Control Range Lower Limit (Engine Configuration)

The minimum engine speed that the engine will allow when operating in a speed control/limit mode.

Data Length: 1 byte
Resolution: 10 rpm/bit, 0 offset
Data Range: 0 to 2,500 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 536 Engine Requested Speed Control Range Upper Limit (Engine Configuration)

The maximum engine speed regardless of load that the engine will allow when operating in a speed control/limit mode, excluding any maximum momentary engine override speed, if supported.

Data Length: 1 byte
Resolution: 10 rpm/bit, 0 offset
Data Range: 0 to 2,500 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 537 Engine Requested Torque Control Range Lower Limit (Engine Configuration)

The minimum engine torque that the engine will allow when operating in a torque control/limit mode.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: 0 to 125%
Type: Measured
Supporting information:
PGN reference: 65251

SPN 538 Engine Requested Torque Control Range Upper Limit (Engine Configuration)

The maximum engine torque that the engine will allow when operating in a torque control/limit mode.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: 0 to 125%
Type: Measured
Supporting information:
PGN reference: 65251

SPN 539 Engine Percent Torque At Idle, Point 1 (Engine Configuration)

The torque limit that indicates the available engine torque which can be provided by the engine at idle speed. This parameter may be influenced by engine temperature (after power up) and other stationary changes (calibration offsets, sensor failures, etc.) See also SPN 188. The data is transmitted in indicated torque as a percent of the reference engine torque.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: 0 to 125%
Type: Measured
Supporting information:
PGN reference: 65251

SPN 540 Engine Percent Torque At Point 2 (Engine Configuration)

The torque limit that indicates the available engine torque which can be provided by the engine at point 2 of the engine map (see PGN 65251 and supporting documents). In engine configuration mode 1 and 3 (see Table PGN65251_A see PGN 65251), point 2 is defined as the kick-in point from which torque is reduced to zero. In mode 2, there are no special requirements for the definition of this point. The data is transmitted in indicated torque as a percent of the reference engine torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Measured

Supporting information:

PGN reference: 65251

SPN 541 Engine Percent Torque At Point 3 (Engine Configuration)

The torque limit that indicates the available engine torque which can be provided by the engine at point 3, 4, and 5 of the engine map (see PGN 65251 and supporting documents).. It is required that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 lie between idle and point 2. The data is transmitted in indicated torque as a percent of the reference engine torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Measured

Supporting information:

PGN reference: 65251

SPN 542 Engine Percent Torque At Point 4 (Engine Configuration)

The torque limit that indicates the available engine torque which can be provided by the engine at point 3, 4, and 5 of the engine map (see PGN 65251 and supporting documents). It is required that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 lie between idle and point 2. The data is transmitted in indicated torque as a percent of the reference engine torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Measured

Supporting information:

PGN reference: 65251

SPN 543 Engine Percent Torque At Point 5 (Engine Configuration)

The torque limit that indicates the available engine torque which can be provided by the engine at point 3, 4, and 5 of the engine map (see PGN 65251 and supporting documents). It is required that one of these points indicate the peak torque point for the current engine torque map. Points 3, 4, and 5 lie between idle and point 2. The data is transmitted in indicated torque as a percent of the reference engine torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Measured

Supporting information:

PGN reference: 65251

SPN 544 Engine Reference Torque (Engine Configuration)

This parameter is the 100% reference value for all defined indicated engine torque parameters. It is only defined once and doesn't change if a different engine torque map becomes valid.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 545 Engine Gain (Kp) Of The Endspped Governor (Engine Configuration)

The endspped governor is defined as a linear line with the following equations (Capital letters mean physical values, small letters mean normalized values). Refer to Figures PGN65251_A and PGN65251_B.

The gain KP/kp is defined as a positive value. The factor 4096 is necessary for realizing flat curves with sufficient resolution as well as very steep curves.

$KP = \text{delta Torque} / \text{delta Speed}$
 $kp \text{ (normalized)} = KP * 250/100\% * 8031 \text{ rpm}/64255 * 4096 = KP * 1280 \text{ rpm}/\%$

Data Length: 2 bytes
Resolution: 1/1280 %/rpm per bit, 0 offset
Data Range: 0 to 50.2 %/rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65251

SPN 546 Retarder Speed At Idle, Point 1 (Retarder Configuration)

Please reference PGN 65249

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65249

SPN 547 Retarder Speed At Peak Torque, Point 5 (Retarder Configuration)

Please reference PGN 65249

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65249

SPN 548 *Maximum Retarder Speed, Point 2 (Retarder Configuration)*

Maximum speed of retarder (Please reference PGN 65249).

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65249

SPN 549 *Retarder Speed At Point 3 (Retarder Configuration)*

Retarder speed of point 3 of the engine retarder torque map. Please reference PGN 65249.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65249

SPN 550 *Retarder Speed At Point 4 (Retarder Configuration)*

Retarder speed of point 4 of the engine retarder torque map. Please reference PGN 65249.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65249

SPN 551 *Percent Torque At Idle, Point 1 (Retarder Configuration)*

The torque limit that indicates the available retarder torque which can be provided by the retarder at idle speed. The data is transmitted in indicated torque as a percent of the reference retarder torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: -125 to 0%

Type: Measured

Supporting information:

PGN reference: 65249

SPN 552 *Percent Torque At Maximum Speed, Point 2 (Retarder Configuration)*

The torque limit that indicates the available retarder torque which can be provided by the retarder at its maximum speed. Please reference PGN 65249. The data is transmitted in indicated torque as a percent of the reference retarder torque.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125 to 0%
Type: Measured
Supporting information:
PGN reference: 65249

SPN 553 *Percent Torque At Point 3 (Retarder Configuration)*

The torque limit that indicates the available retarder torque which can be provided by the retarder at points 3 and 4 of the retarder torque map. Please reference PGN 65249. The data is transmitted in indicated torque as a percent of the reference retarder torque.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125 to 0%
Type: Measured
Supporting information:
PGN reference: 65249

SPN 554 *Percent Torque At Point 4 (Retarder Configuration)*

The torque limit that indicates the available retarder torque which can be provided by the retarder at points 3 and 4 of the retarder torque map. Please reference PGN 65249. The data is transmitted in indicated torque as a percent of the reference retarder torque.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125 to 0%
Type: Measured
Supporting information:
PGN reference: 65249

SPN 555 *Percent Torque At Peak Torque, Point 5 (Retarder Configuration)*

The torque limit that indicates the available retarder torque which can be provided by the retarder at point 5 of the retarder torque map. Please reference PGN 65249. The data is transmitted in indicated torque as a percent of the reference retarder

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125 to 0%
Type: Measured
Supporting information:
PGN reference: 65249

SPN 556 Reference Retarder Torque (Retarder Configuration)

This parameter is the 100% reference value for all defined indicated retarder torque parameters. It is only defined once and doesn't change if a different retarder torque map becomes valid.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65249

SPN 557 Retarder Control Method (Retarder Configuration)

This parameter identifies the number of steps used by the retarder.

Data Length: 1 byte
Resolution: 1 step/bit, 0 offset
Data Range: 0 to 250 steps Operational Range: 0: continuous control, 1 On/Off control, 2 to 250: Number of steps
Type: Measured
Supporting information:
PGN reference: 65249

SPN 558 Accelerator Pedal 1 Low Idle Switch

Switch signal which indicates the state of the accelerator pedal 1 low idle switch. The low idle switch is defined in SAE Recommended Practice J1843.

00 - Accelerator pedal 1 not in low idle condition
01 - Accelerator pedal 1 in low idle condition
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61443

SPN 559 Accelerator Pedal Kickdown Switch

Switch signal which indicates whether the accelerator pedal kickdown switch is opened or closed. The kickdown switch is defined in SAE J1843.

00 - Kickdown passive
01 - Kickdown active
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61443

SPN 560 Transmission Driveline Engaged

Driveline engaged indicates the transmission controlled portion of the driveline is engaged sufficiently to allow a transfer of torque through the transmission. Driveline engaged is ACTIVE whenever the transmission is in gear and the clutch (if controlled by the transmission controller) is less than 100% clutch slip (clutch able to transfer torque). This parameter should be used in conjunction with the parameter "Shift in Process" (SPN 574). While a shift is in process, the receiver should not assume that the driveline is either fully engaged or disengaged (i.e., cruise control).

00 - Driveline disengaged

01 - Driveline engaged

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61442

SPN 561 ASR Engine Control Active

State signal which indicates that ASR engine control has been commanded to be active. Active means that ASR actually tries to control the engine. This state signal is independent of other control commands to the engine (e.g., from the transmission) which may have higher priority.

00 - ASR engine control passive but installed

01 - ASR engine control active

10 - Reserved

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 562 ASR Brake Control Active

State signal which indicates that ASR brake control is active. Active means that ASR actually controls wheel brake pressure at one or more wheels of the driven axle(s).

00 - ASR brake control passive but installed

01 - ASR brake control active

10 - Reserved

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 563 *Anti-Lock Braking (ABS) Active*

State signal which indicates that the ABS is active. The signal is set active when wheel brake pressure actually starts to be modulated by ABS and is reset to passive when all wheels are in a stable condition for a certain time. The signal can also be set active when driven wheels are in high slip (e.g., caused by retarder). Whenever the ABS system is not fully operational (due to a defect or during off-road ABS operation), this signal is only valid for that part of the system that is still working. When ABS is switched off completely, the flag is set to passive regardless of the current wheel slip conditions.

00 - ABS passive but installed

01 - ABS active

10 - Reserved

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 564 *Differential Lock State - Central*

State used which indicates the condition of the central differential lock. The differential locks are located as defined in attached figure SPN564_A.

00 Differential lock disengaged

01 Differential lock engaged

10 Error

PGN reference: 61446

SPN 571 Retarder Enable - Brake Assist Switch

Switch signal which indicates whether the operator wishes the retarder to be enabled for vehicle braking assist. The retarder does not check this switch, nor does the enabling of this switch engage the retarder. When this switch is "enabled," the devices constructing TSC1 – destination retarder messages may command retarder torque for braking. For example, the cruise control should not request retarder torque if this switch is not "enabled." The switch exists to prevent the engine retarder from being asked to be engaged via TSC1 in a noise sensitive area. See also SPN 572

00 Retarder - brake assist disabled
01 Retarder - brake assist enabled
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61440

SPN 572 Retarder Enable - Shift Assist Switch

Switch signal which indicates whether the operator wishes the retarder to be enabled for transmission shift assist. The retarder does not check this switch, nor does the enabling of this switch engage the retarder. When this switch is "enabled," the transmission may activate the retarder (via the TSC1 message) to increase the rate of engine deceleration to assist in shift control. The switch exists to prevent the engine retarder from being asked to be engaged via TSC1 in a noise sensitive area. See SPN 571.

00 Retarder - shift assist disabled

01 Retarder - shift assist enabled

10 Error

SPN 578 *Drive Axle Temperature*

Temperature of axle lubricant in drive axle.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 579 *Drive Axle Lift Air Pressure*

Gage pressure of air in system that utilizes compressed air to provide force between axle and frame.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 580 *Altitude*

Altitude of the vehicle referenced to sea level at standard atmospheric pressure and temperature.

Data Length: 2 bytes

Resolution: 0.125 m/bit, -2500 m offset

Data Range: -2500 to 5531.875 m Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65256

SPN 581 *Transmission Gear Ratio*

The transmission configuration describes the number of forward gears, the number of reverse gears, and the ratio of each gear with the following resolution.

Data Length: 2 bytes

Resolution: 0.001/bit, 0 offset

Data Range: 0 to 64.255 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65250

SPN 582 *Axle Weight*

Total mass imposed by the tires on the road surface at the specified axle.

Data Length: 2 bytes

Resolution: 0.5 kg/bit, 0 offset

Data Range: 0 to 32,127.5 kg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65258

SPN 583 *Pitch*

Pitch of the vehicle as calculated by the navigation device(s).

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: -200 deg (DECENT) to +301.992 deg (ASCENT)

Type: Measured

Supporting information:

PGN reference: 65256

SPN 584 *Latitude*

Latitude position of the vehicle.

Data Length: 4 bytes

Resolution: 10^{-7} deg/bit, -210 deg offset

Data Range: -210 to 211.1008122 deg Operational Range: -210 deg (SOUTH) to +211.108122 deg (NORTH)

Type: Measured

Supporting information:

PGN reference: 65267

SPN 585 *Longitude*

Longitude position of the vehicle.

Data Length: 4 bytes

Resolution: 10^{-7} deg/bit, -210 deg offset

Data Range: -210 to 211.1008122 deg Operational Range: -210 deg (WEST) to +211.108122 deg (EAST)

Type: Measured

Supporting information:

PGN reference: 65267

SPN 586 *Make*

Make of the component corresponding to the codes defined in the American Trucking Association Vehicle Maintenance Reporting Standard (ATA/VMRS). It is suggested that spaces (ASCII 32) are used to fill the remaining characters if the ATA/VMRS make code is less than five characters in length.

NOTE- The ASCII character "*" is reserved as a delimiter.

Data Length: 5 bytes

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65259

SPN 587 *Model*

Model of the component.

NOTE - The ASCII character "*" is reserved as a delimiter.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65259

SPN 588 *Serial Number*

Serial number of the component.

NOTE - The ASCII character "*" is reserved as a delimiter.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65259

SPN 589 *Alternator Speed*

Actual rotation speed of the alternator.

Data Length: 2 bytes

Resolution: 0.5 rpm/bit, 0 offset

Data Range: 0 to 32,127.5 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65237

SPN 590 *Engine Idle Shutdown Timer State*

Status signal which indicates the current mode of operation of the idle shutdown timer system. See Figure SPN590_A.

00 - Inactive
01 - Active
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 590

PGN reference: 65252

SPN 591 *Engine Idle Shutdown Timer Function*

Parameter which indicates the configuration of the idle shutdown timer system.

00 - Disabled in calibration
01 - Enabled in calibration
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65252

SPN 592 *Engine Idle Shutdown Timer Override*

Status signal which indicates the status of the override feature of the idle shutdown timer system. See Figure SPN590_A.

00 - Inactive
01 - Active
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 593 *Engine Idle Shutdown has Shutdown Engine*

Status signal which identifies whether or not the engine has been shutdown by the idle shutdown timer system. See Figure SPN590_A.

00 - No
01 - Yes
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 594 *Engine Idle Shutdown Driver Alert Mode*

Status signal which indicates the status of the driver alert mode of the idle shutdown timer system. While the driver alert mode is active, the idle shutdown timer may be overridden. See Figure SPN590_A.

00 - Inactive
01 - Active
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 595 *Cruise Control Active*

Cruise control is switched on. It is not ensured that the engine is controlled by cruise control, as in the case of a large driver's demand the engine is controlled by the driver while cruise control is active (maximum selection of cruise control and driver's demand). The cruise control is set to 0 if a switch off condition occurs.

00 - Cruise control switched off
01 - Cruise control switched on
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 596 *Cruise Control Enable Switch*

Switch signal which indicates that it is possible to manage the cruise control function.

00 - Cruise control disabled
01 - Cruise control enabled
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 597 *Brake Switch*

Switch signal which indicates that the driver operated brake foot pedal is being pressed. This brake foot pedal is controlling the vehicles' service brake (total vehicle braking application, not park brakes). It is necessary for safe drivetrain behavior that the switch activates before the physical braking components are activated (i.e. Disengage the cruise control function prior to the activation of friction brakes).

00 - Brake pedal released
01 - Brake pedal depressed
10 - Error
11 - Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 598 *Clutch Switch*

Switch signal which indicates that the clutch pedal is being pressed. It is necessary for a safe drivetrain behavior that the clutch switch is set before the clutch is opened (cruise control function).

00 - Clutch pedal released
01 - Clutch pedal depressed
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 599 Cruise Control Set Switch

Switch signal of the cruise control activator which indicates that the activator is in the position "set."

00 - Cruise control activator not in the position "set"

01 - Cruise control activator in position "set"

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 600 Cruise Control Coast (Decelerate) Switch

Switch signal of the cruise control activator which indicates that the activator is in the position "coast (decelerate)."

00 - Cruise control activator not in the position "coast"

01 - Cruise control activator in position "coast"

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 601 Cruise Control Resume Switch

Switch signal of the cruise control activator which indicates that the activator is in the position "resume."

00 - Cruise control activator not in the position "resume"

01 - Cruise control activator in position "resume"

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 602 *Cruise Control Accelerate Switch*

Switch signal of the cruise control activator which indicates that the activator is in the position "accelerate."

00 - Cruise control activator not in the position "accelerate"

01 - Cruise control activator in position "accelerate"

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 604 *Transmission Neutral Switch*

Identifies the status of the switch that indicates neutral.

00 - Off

01 - On

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65219

SPN 605 *Refrigerant High Pressure Switch*

Switch signal which indicates the position of the high pressure switch in the coolant circuit of an air conditioning system. When the switch is enabled, the pressure inside the circuit is too high and the compressor clutch may be disengaged.

00 - Pressure normal

01 - Pressure too high, compressor clutch may be disengaged

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65252

SPN 606 *Engine Momentary Overspeed Enable*

Command signal used to indicate that the engine speed may be boosted up to the maximum engine overspeed value to accommodate transmission downshifts. The maximum time for overspeed is limited by the time defined in the engine configuration message (see PGN 65,251). The transmission module must command a "override disabled" state at least once before the engine will accept a subsequent request for overspeed.

00 Momentary engine overspeed is disabled

01 Momentary engine overspeed is enabled

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61442

SPN 607 *Progressive Shift Disable*

Command signal used to indicate that progressive shifting by the engine should be disallowed.

00 Progressive shift is not disabled

01 Progressive shift is disabled

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61442

SPN 619 *Parking Brake Actuator*

Signal which indicates the current state of the actuator(s) that control the parking brake (see also SPN 70).

00 - Parking brake actuator inactive

01 - Parking brake actuator active

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65274

SPN 626 *Engine Start Enable Device 1*

Devices that assist an Engine in starting, e.g. intake heaters and ether. Primary starting aid.
Parameter indicating whether the start enable device 1 is ON or OFF

00 - start enable OFF
01 - start enable ON
10 - reserved
11 - not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64966

SPN 633 (R) *Engine Fuel Actuator 1 Control Command*

The control command to fuel actuator 1, normalized to percent, where 0% represents fully closed and 100% represents fully open. Typically, this fuel actuator is used to regulate low pressure natural gas flow rate, mixing into the air flow, which together then come into the engine. Using the standard convention for determining the position. Left/front is #1 and right/rear is #2 (SPN 1244).

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: 0 to 100%

Type: Status

Supporting information:

PGN reference: 61466

SPN 681 *Transmission Gear Shift Inhibit Request*

Command signal to inhibit gear shifts.

00 Gear shifts are allowed (disable function)
01 Gear shifts are inhibited (enable function)
10 Reserved
11 Take no action (leave function as is)

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 682 *Transmission Torque Converter Lockup Disable Request*

Command signal to prevent torque converter lockup, which may cause problems in certain circumstances for ASR.

00 Allow torque converter lockup
01 Disable torque converter lockup
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 683 *Disengage Driveline Request*

Command signal used to simply disengage the driveline, e.g., to prevent engine drag torque from causing high wheel slip on slippery surfaces.

00 Allow driveline engagement
01 Disengage driveline
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 684 *Requested Percent Clutch Slip*

Parameter which represents the percent clutch slip requested by a device.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 685 *Disengage Differential Lock Request - Front Axle 1*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 686 *Disengage Differential Lock Request - Front Axle 2*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 687 *Disengage Differential Lock Request - Rear Axle 1*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 688 *Disengage Differential Lock Request - Rear Axle 2*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 689 *Disengage Differential Lock Request - Central*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 690 *Disengage Differential Lock Request - Central Front*

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 691 Disengage Differential Lock Request - Central Rear

Command signal used to disengage the various differential locks, e.g., to allow an undistributed individual wheel control by ABS. The differential locks are located as defined in Figure SPN564_A.

00 Engage differential lock
01 Disengage differential lock
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 256

SPN 695 Engine Override Control Mode

The override control mode defines which sort of command is used:

00 Override disabled - Disable any existing control commanded by the source of this command.
01 Speed control - Govern speed to the included "desired speed" value.
10 Torque control - Control torque to the included "desired torque" value.
11 Speed/torque limit control - Limit speed and/or torque based on the included limit values. The speed limit governor is a droop governor where the speed limit value defines the speed at the maximum torque available during this operation.

If a device wants to know whether it has access to the engine, there are several possibilities:

- a. Comparing its command with the actual engine broadcasts.
- b. Looking at command modes from other devices.
- c. Looking to the engine and retarder torque mode.

Remarks:

- a. The realization of a torque limit (minimum selection) is possible by setting the speed limit to a high value (0xFF).
- b. The realization of a speed limit (minimum selection) is possible by setting the torque limit to a high value (0xFF).
- c. Limiting the retarder torque means to limit the magnitude of the torque request. As the brake torque is represented by negative torque values, the limitation must be done by a maximum selection of the requested torque and the retarder internal torque signals.
- d. For torque increasing functions, time limits for the torque or speed value (command) and the direct modes are desirable.
- e. The selection of which device has control of the engine's speed or torque depends on the override mode priority (see SPN 897) with the highest priority device gaining control. In the case of two devices with identical priority, the engine responds to speed/torque control commands over speed/torque limit commands and will act on the speed or torque commands on a first come, first served basis. The torque limit will be a "lowest wins" selection (e.g., if one device commands 60% limit and another 80% limit, then the engine will limit torque to 60%). Figure SPN695_A provides a flowchart of the torque/speed control priority selection logic.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 695

PGN reference: 0

SPN 696 Engine Requested Speed Control Conditions

This mode tells the engine control system the governor characteristics that are desired during speed control. The four characteristics defined are:

- 00 Transient Optimized for driveline disengaged and non-lockup conditions
- 01 Stability Optimized for driveline disengaged and non-lockup conditions
- 10 Stability Optimized for driveline engaged and/or in lockup condition 1 (e.g., vehicle driveline)
- 11 Stability Optimized for driveline engaged and/or in lockup condition 2 (e.g., PTO driveline)

00b - This speed governor gain selection is adjusted to provide rapid transition between speed setpoints. RPM overshoot and undershoot may be greater than what is seen when the "speed control characteristic" is set to be stability optimized.

01b - This control condition has been optimized to minimize rpm overshoot and undershoot given an expected plant consisting of the engine and its accessory loads. This gain adjustment is not intended to compensate for driveline characteristics. This characteristic is most appropriate when no driveline is connected.

10b - This control condition has been optimized to minimize rpm overshoot and undershoot given a more complex plant. For instance, the more complex plant would contain the engine, its accessory loads and the driveline characteristics. As an example, the driveline characteristics might include the effective spring mass relationship of pumps, tires, clutches, axles, driveshafts, and multiple gear ratios. This characteristic is most appropriate when a driveline is engaged.

11b - This speed control characteristic is available for applications requiring compensation for more than one driveline characteristic. It has been optimized to minimize rpm overshoot and undershoot given a more complex plant of the second variety. This more complex plant would again contain the engine, its accessory loads and a second driveline characteristic unique from the one described in speed control characteristic 10b.

SPN 788 *Transmission Clutch Actuator*

Identifies the status of the actuator that controls the clutch.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65223

SPN 875 *Refrigerant Low Pressure Switch*

Switch signal which indicates the position of the low pressure switch in the coolant circuit of an air conditioning system. When the switch is enabled, the pressure inside the circuit is too low and the compressor clutch may be disengaged.

00 - Pressure normal
01 - Pressure too low, compressor clutch may be disengaged
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65252

SPN 897 *Override Control Mode Priority*

This field is used as an input to the engine or retarder to determine the priority of the Override Control Mode received in the Torque/Speed Control message (see PGN 0). The default is 11 (Low priority). It is not required to use the same priority during the entire override function. For example, the transmission can use priority 01 (High priority) during a shift, but can set the priority to 11 (Low priority) at the end of the shift to allow traction control to also interact with the torque limit of the engine.

The four priority levels defined are:

00 Highest priority
01 High priority
10 Medium priority
11 Low priority

00b - Highest Priority = Used for situations that require immediate action by the receiving device in order to provide safe vehicle operation (i.e., braking systems). This level of priority should only be used in safety critical conditions.

01b - High Priority = Used for control situations that require prompt action in order to provide safe vehicle operation. An example is when the transmission is performing a shift and requires control of the engine in order to control driveline reengagement.

10b - Medium Priority = Used for powertrain control operations which are related to assuring that the vehicle is in a stable operating condition. An example is when the traction control system is commanding the engine in order to achieve traction stability.

11b - Low Priority = Used to indicate that the associated command desires powertrain control but is needed for function which improves the driver comfort which may be overridden by other devices. An example is cruise control or the non-critical part of a transmission shift to a new gear.

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 0

SPN 898 *Engine Requested Speed/Speed Limit*

Parameter provided to the engine from external sources in the torque/speed control message. This is the engine speed which the engine is expected to operate at if the speed control mode is active or the engine speed which the engine is not expected to exceed if the speed limit mode is active.

Data Length: 2 bytes
Resolution: 0.125 rpm/bit, 0 offset
Data Range: 0 to 8,031.875 rpm Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 0

SPN 899 *Engine Torque Mode*

State signal which indicates which engine torque mode is currently generating, limiting, or controlling the torque. Note that the modes are not in prioritized order. Not all modes may be relevant for a given device. Some devices may not implement all functions. For typical priorities refer to Figures SPN512_A and SPN512_B for engine control. The data type of this parameter is measured.

Mode 0000b means "No request": engine torque may range from 0 to full load only due to low idle governor output.

Modes 0001b to 1110b indicate that there is either a torque request or the identified function is currently controlling the engine: engine torque may range from 0 (no fueling) to the upper limit.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 899

PGN reference: 61444

SPN 900 *Retarder Torque Mode*

State signal which indicates which retarder torque mode is currently generating, limiting, or controlling the torque. Note that the modes are not in prioritized order. Not all modes may be relevant for a given device. Some devices may not implement all functions. For typical priorities refer to Tables SPN518_A to SPN518_B for retarder control. The data type of this parameter is measured.

Mode 0000b means "No request": retarder torque = 0 (no braking).

Modes 0001b to 1110b indicate that there is either a torque request or the identified function is currently controlling the retarder: retarder torque may range from 0 (no braking) to the upper limit.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 899

PGN reference: 61440

SPN 901 Retarder Type

A vehicle retarder is a supplementary device to the wheel brakes for the driver to better control the vehicle. The wheel brakes used in the vehicle are not designed for continuous retarding operation. In a prolonged period of braking, the brakes can be thermally over-stressed, causing the braking effect to be reduced or even lead to complete braking system failure. The vehicle retarder is designed for continuous operation for braking during downhill operation and is also used for braking the vehicle to comply with speed limits and traffic conditions.

This parameter provides some indication of the retarder dynamics. It is used in the retarder configuration message. The data type of this parameter is measured.

0000 Electric/Magnetic
0001 Hydraulic
0010 Cooled Friction
0011 Compression Release (Engine retarder)
0100 Exhaust
0101-1101 Not defined
1110 Other
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 901

PGN reference: 65249

SPN 902 Retarder Location

This parameter defines whether the "torque/speed curve" defined by the retarder configuration message (PGN 65249) is dependent on engine rpm, output shaft rpm, or other parameter. The data type of this parameter is measured.

0000 (Primary) Engine Compression Release Brake (Engine rpm)
0001 (Primary) Engine Exhaust Brake (Exhaust pressure)
0010 (Primary) Transmission Input (Engine rpm)
0011 (Secondary) Transmission Output (Output Shaft rpm)
0100 (Secondary) Driveline (Output Shaft rpm)
0101 Trailer (Vehicle speed)
0110-1101 Not defined
1110 Other
1111 Not available

Data Length: 4 bits

Type: Status

Supporting information:

PGN reference: 65219

SPN 904 *Front Axle Speed*

The average speed of the two front wheels.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 905 *Relative Speed; Front Axle, Left Wheel*

The speed of the front axle, left wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 906 *Relative Speed; Front Axle, Right Wheel*

The speed of the front axle, right wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 907 *Relative Speed; Rear Axle #1, Left Wheel*

The speed of the rear axle #1, left wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 908 *Relative Speed; Rear Axle #1, Right Wheel*

The speed of the rear axle #1, right wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 909 *Relative Speed; Rear Axle #2, Left Wheel*

The speed of the rear axle #2, left wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 910 *Relative Speed; Rear Axle #2, Right Wheel*

The speed of the rear axle #2, right wheel relative to the front axle speed, SPN 904.

Data Length: 1 byte

Resolution: 1/16 km/h per bit, -7.8125 km/h offset

Data Range: -7.8125 to 7.8125 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65215

SPN 911 Service Component Identification

Identification of component needing service. See Table SPN911_A.

Data Length: 1 byte

Resolution: 1 ID/bit, 0 offset

Data Range: 0 to 250 ID Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 911

PGN reference: 65216

SPN 912 Service Component Identification

Identification of component needing service. See Table SPN911_A.

Data Length: 1 byte

Resolution: 1 ID/bit, 0 offset

Data Range: 0 to 250 ID Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65216

SPN 913 Service Component Identification

Identification of component needing service. See Table SPN911_A.

Data Length: 1 byte

Resolution: 1 ID/bit, 0 offset

Data Range: 0 to 250 ID Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65216

SPN 914 Service Distance

The distance which can be traveled by the vehicle before the next service inspection is required. A negative distance is transmitted if the service inspection has been passed. The component that requires service is identified by the service component identification (see SPN 911-913, 1379, and 1584).

Data Length: 2 bytes

Resolution: 5 km/bit, -160,635 km offset

Data Range: -160,635 to 160,640 km Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65216

SPN 915 Service Delay/Calendar Time Based

The time in weeks until the next vehicle service inspection is required. A negative value is transmitted if the service inspection has been passed. The component that requires service is identified by the service component identification (see SPN 911-913, 1379, and 1584).

Data Length: 1 byte
Resolution: 1 week/bit, -125 weeks offset
Data Range: -125 to 125 weeks Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65216

SPN 916 Service Delay/Operational Time Based

The time in vehicle operational time until the next vehicle service inspection is required. A negative value is transmitted if the service inspection has been passed. The component that requires service is identified by the service component identification (see SPN 911-913, 1379, and 1584).

Data Length: 2 bytes
Resolution: 1 hr/bit, -32,127 hr offset
Data Range: -32,127 to 32,128 hr Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65216

SPN 917 High Resolution Total Vehicle Distance

Accumulated distance traveled by the vehicle during its operation.

NOTE - See SPN 245 for alternate resolution.

Data Length: 4 bytes
Resolution: 5 m/bit, 0 offset
Data Range: 0 to 21,055,406 km Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65217

SPN 918 High Resolution Trip Distance

Distance traveled during all or part of a journey.

NOTE - See SPN 244 for alternate resolution.

Data Length: 4 bytes
Resolution: 5 m/bit, 0 offset
Data Range: 0 to 21,055,406 km Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65217

SPN 927 Location

To identify to which of several similar devices (such as tires or fuel tanks) the information applies.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61446

SPN 928 Axle Location

To identify to which of several similar devices (such as tires or fuel tanks) the information applies.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65258

SPN 929 *Tire Location*

Identifies which tire is associated with the parametric data in this PGN.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 930 *Drive Axle Location*

To identify to which of several similar devices (such as tires or fuel tanks) the information applies.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 957 *Number of Forward Gear Ratios*

Number of forward gear ratios in the transmission, provided as part of the configuration.

Data Length: 1 byte

Resolution: 1 gear value/bit, 0 offset

Data Range: 0 to 250

Operational Range: 0 to 125 gear ratios

Type: Measured

Supporting information:

PGN reference: 65250

SPN 958 *Number of Reverse Gear Ratios*

Number of reverse gear ratios in the transmission, provided as part of the transmission configuration.

Data Length: 1 byte

Resolution: 1 gear value/bit, 0 offset

Data Range: 0 to 250

Operational Range: 0 to 125 gear ratios

Type: Measured

Supporting information:

PGN reference: 65250

SPN 959 *Seconds*

Part of a parameter used to represent time.

Data Length: 1 byte

Resolution: 0.25 s/bit, 0 offset

Data Range: 0 to 62.5 s

Operational Range: 0 to 59.75 sec

Type: Measured

Supporting information:

PGN reference: 65254

SPN 960 *Minutes*

Part of a parameter used to represent time.

Data Length: 1 byte

Resolution: 1 min/bit, 0 offset

Data Range: 0 to 250 mins

Operational Range: 0 to 59 min

Type: Measured

Supporting information:

PGN reference: 65254

SPN 961 *Hours*

Part of a parameter used to represent time.

Data Length: 1 byte

Resolution: 1 hr/bit, 0 offset

Data Range: 0 to 250 hr

Operational Range: 0 to 23 hr

Type: Measured

Supporting information:

PGN reference: 65254

SPN 962 *Day*

Part of a parameter used to represent a calendar date.

NOTE - A value of 0 for the date is null. The values 1, 2, 3, and 4 are used to identify the first day of the month; 5, 6, 7, and 8 identify the second day of the month; etc.

Data Length: 1 byte

Resolution: 0.25 days/bit, 0 offset

Data Range: 0 to 62.5 days

Operational Range: 0.25 to 31.75 day

Type: Measured

Supporting information:

PGN reference: 65254

SPN 963 *Month*

Part of a parameter used to represent a calendar date.

NOTE - A value of 0 for the month is null. The value 1 identifies January; 2 identifies February; etc.

Data Length: 1 byte

Resolution: 1 month/bit, 0 offset

Data Range: 0 to 250 months

Operational Range: 1 to 12 month

Type: Measured

Supporting information:

PGN reference: 65254

SPN 964 *Year*

Part of a parameter used to represent a calendar date.

NOTE - A value of 0 for the year identifies the year 1985; a value of 1 identifies 1986; etc.

Data Length: 1 byte

Resolution: 1 year/bit, 1985 years offset

Data Range: 1985 to 2235 years

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65254

SPN 965 *Number of Software Identification Fields*

Number of software identification designators represented in the software identification parameter group.

Data Length: 1 byte

Resolution: 1 step/bit, 0 offset

Data Range: 0 to 250 steps

Operational Range: 0 to 125

Type: Measured

Supporting information:

PGN reference: 65242

SPN 966 *Engine Test Mode Switch*

Switch signal which indicates the position of the engine test mode switch.

00 - Off

01 - On

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 967 *Engine Idle Decrement Switch*

Switch signal which indicates the position of the idle decrement switch.

00 - Off

01 - On

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 968 *Engine Idle Increment Switch*

Switch signal which indicates the position of the idle increment switch.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 969 *Remote Accelerator Enable Switch*

Switch signal which indicates that the remote accelerator has been enabled and controls the engine.

00 - Off
01 - On
10 - Error
11 - Not available

NOTE—The accelerator interlock switch (see SPN 972) must be disabled in order for the remote accelerator to perform engine control.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 970 *Engine Auxiliary Shutdown Switch*

Switch signal which requests that all engine fueling stop.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 971 *Engine Derate Switch*

Switch signal used to activate the torque limiting feature of the engine. The specific nature of torque limiting should be verified with the manufacturer.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 972 *Accelerator Interlock Switch*

Switch signal used to disable the accelerator and remote accelerator inputs, causing the engine to return to idle.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 973 *Engine Retarder Selection*

The position of the operator controlled selector, expressed as a percentage and determined by the ratio of the current position of the selector to its maximum possible position. Zero percent means no braking torque is requested by the operator from the engine while 100% means maximum braking.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 974 *Remote Accelerator Pedal Position*

The ratio of actual position of the remote analog engine speed/torque request input device (such as an accelerator pedal or throttle lever) to the maximum position of the input device.

For example, in on-highway vehicles this could be an accelerator control device that is external to the drivers cab or an accelerator that is controlled by a hand lever from the operators seat.

The Remote Accelerator Enable Switch is SPN 969. This parameter enables the remote accelerator operation.

NOTE—See SPNs 28, 29, and 91 for additional accelerator position parameters. If only one accelerator position exists on a vehicle, SPN 91 shall be used

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61443

SPN 975 *Estimated Percent Fan Speed*

Estimated fan speed as a ratio of the fan drive (current speed) to the fully engaged fan drive (maximum fan speed). A two state fan (off/on) will use 0% and 100% respectively. A three state fan (off/intermediate/on) will use 0%, 50% and 100% respectively. A variable speed fan will use 0% to 100%. Multiple fan systems will use 0 to 100% to indicate the percent cooling capacity being provided.

Note that the intermediate fan speed of a three state fan will vary with different fan drives, therefore 50% is being used to indicate that the intermediate speed is required from the fan drive.

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65213

SPN 976 PTO State

This parameter is used to indicate the current state or mode of operation by the power takeoff (PTO) device. It needs to be ensured that each achieved state information be set up to be conveyed in at least one datalink message before a transition to another state is allowed.

00000	Off/Disabled
00001	Hold
00010	Remote Hold
00011	Standby
00100	Remote Standby
00101	Set
00110	Decelerate/Coast
00111	Resume
01000	Accelerate
01001	Accelerator Override
01010	Preprogrammed set speed 1
01011	Preprogrammed set speed 2
01100	Preprogrammed set speed 3
01101	Preprogrammed set speed 4
01110	Preprogrammed set speed 5
01111	Preprogrammed set speed 6
10000	Preprogrammed set speed 7
10001	Preprogrammed set speed 8
10010	PTO set speed memory 1
10011	PTO set speed memory 2
10100-11110	Not defined
11111	Not available

Off/Disabled 00000b — Used to indicate that the PTO enable switch is in the off position.

Hold 00001b — Used to indicate that the PTO device is active and currently maintaining a captured operating speed.

Remote Hold 00010b — Used to indicate that the remote PTO device is active and currently maintaining a captured operating speed.

Standby 00011b — Used to indicate that the PTO device enable switch is in the ON position and it is possible to manage the PTO device.

Remote Standby 00100b — Used to indicate that the remote PTO device enable switch is in the ON position and it is possible to manage the PTO device.

Set 00101b — Used to indicate that the PTO device is establishing current speed as the operating speed (captured value).

Decelerate/Coast 00110b — Used to indicate that the PTO device is in the process of ramping down, or coasting, from the current operating speed.

Resume 00111b — Used to indicate that the PTO device is in the process of resuming the operating speed to a previously captured value.

Accelerate 01000b — Used to indicate that the PTO device is in the process of ramping up the operating speed.

Accelerator Override 01001b—Used to indicate that the PTO device is active but for the present time the engine is controlled by a large driver's demand.

Preprogrammed Set Speed 1 01010b—Used to indicate that the PTO device is establishing a first preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 2 01011b—Used to indicate that the PTO device is establishing a second preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 3 01100b —Used to indicate that the remote PTO device is establishing a third preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 4 01101b —Used to indicate that the remote PTO device is establishing a fourth preprogrammed set

speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 5 01110b —Used to indicate that the remote PTO device is establishing a fifth preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 6 01111b—Used to indicate that the remote PTO device is establishing a sixth preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 7 10000b —Used to indicate that the remote PTO device is establishing a seventh preprogrammed set speed (user programmable) as the current operating speed.

Preprogrammed Set Speed 8 10001b —Used to indicate that the remote PTO device is establishing a eighth preprogrammed set speed (user programmable) as the current operating speed.

PTO set speed memory 1 10010b —Used to indicate that PTO set speed memory one set state is active.

PTO set speed memory 2 10011b — Used to indicate that PTO set speed memory two set state is active.

Data Length: 5 bits

Resolution: 32 states/5 bit, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65265

SPN 977 Fan Drive State

This parameter is used to indicate the current state or mode of operation by the fan drive.

0000 Fan off
0001 Engine system—General
0010 Excessive engine air temperature
0011 Excessive engine oil temperature
0100 Excessive engine coolant temperature
0101 Excessive transmission oil temperature
0110 Excessive hydraulic oil temperature
0111 Default Operation
1000 Not defined
1001 Manual control
1010 Transmission retarder
1011 A/C system
1100 Timer
1101 Engine brake
1110 Other
1111 Not available

Fan off 0000b —Used to indicate that the fan clutch is disengaged and the fan is inactive

Engine system—General 0001b —Used to indicate that the fan is active due to an engine system not otherwise defined.

Excessive engine air temperature 0010b —Used to indicate that the fan is active due to high air temperature.

Excessive engine oil temperature 0011b —Used to indicate that the fan is active due to high oil temperature.

Excessive engine coolant temperature 0100b —Used to indicate that the fan is active due to high coolant temperature.

Manual control 1001b —Used to indicate that the fan is active as requested by the operator.

Transmission retarder 1010b —Used to indicate that the fan is active as required by the transmission retarder.

A/C system 1011b —Used to indicate that the fan is active as required by the air conditioning system.

Timer 1100b —Used to indicate that the fan is active as required by a timing function.

Engine brake 1101b —Used to indicate that the fan is active as required to assist engine braking.

Excessive transmission oil temperature - 0101b - Used to indicate fan is active due to excessive transmission oil temperature.

Excessive hydraulic oil temperature - 0110b - Used to indicate fan is active due to excessive hydraulic oil temperature.

Default Operation - 0111b - Used to indicate fan is active due to a error condition resulting in default operation

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65213

SPN 978 Engine Remote PTO Variable Speed Control Switch

Switch signal which indicates that the remote PTO toggle switch is in the enabled (ON) position. If the toggle switch is enabled and other conditions are satisfied then the remote PTO control feature is activated and the PTO will control at a variable speed.

00 - Off
01 - On
10 - Error

SPN 985 A/C High Pressure Fan Switch

Switch signal which indicates that the pressure in the coolant circuit of an air conditioning system is high and the fan may be engaged.

00 - Pressure normal

01 - Pressure high, fan may be engaged

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65252

SPN 986 Requested Percent Fan Speed

Fan speed as a ratio of the actual fan drive (current speed) to the fully engaged fan drive (maximum fan speed). A two state fan (off/on) will use 0% and 100% respectively. A three state fan (off/intermediate/on) will use 0%, 50% and 100% respectively. A variable speed fan will use 0% to 100%. Multiple fan systems will use 0 to 100% to indicate the percent cooling capacity being provided. Feedback to this request is provided using the estimated fan speed (see SPN 975).

Note that the intermediate fan speed of a three state fan will vary with different fan drives, therefore 50% is being used to indicate that the intermediate speed is required from the fan drive.

Data Length: 1 byte

SPN 988 *Trip Group 1*

Command signal used to reset the PGNs and parameters as defined in Table SPN988_A.

00 Take no action
01 Reset
10 Reserved
11 Not applicable

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 988

PGN reference: 56832

SPN 989 *Trip Group 2 - Proprietary*

Command signal used to reset proprietary parameters associated with a trip but not defined within this document.

00 Take no action
01 Reset
10 Reserved
11 Not applicable

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56832

SPN 990 *Total Compression Brake Distance*

Total distance over which the compression brakes have been active for the life of the engine.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65212

SPN 991 *Trip Compression Brake Distance*

Total distance over which the compression brakes have been active since the last trip reset.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65212

SPN 992 Trip Service Brake Distance

Total distance over which the service brakes have been active since the last trip reset.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65212

SPN 993 Trip Service Brake Applications

Total number of times the service brakes have been activated since the last trip reset. Brake applications of less than 0.5 s are not counted and lengthy brake applications (longer than 0.5 s) are counted as a single event.

NOTE - Definition and resolution shall stay the same if brakes are applied by only the tractor, only the trailer or both.

Data Length: 4 bytes

Resolution: 1 brake appl/bit, 0 offset

Data Range: 0 to 4,227,858,431 appl Operational Range: same as data range

Type: Measured

Supporting information:

PGN 65212

SPN 994 Trip Fan On Time

Total time the fan has been on (due to an automatic trigger or manual trigger) since the last trip reset. The fan could be requested to be on by the engine system, a manual switch, and/or the A/C system. Whichever system requests the fan activation first shall have the time accumulated against it. The sum total of these three values shall equal the trip fan on time.

NOTE—If the fan has been requested to be on by a component that is not one of the defined categories, this time shall be accumulated in the Engine System category by default.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65211

SPN 995 Trip Fan On Time Due to the Engine System

Total time the fan has been on due to engine triggers (i.e., excluding time on due to an operator manual switch or A/C system) since the last trip reset. For the time to be accumulated against the engine system, it is necessary that it be the first to request the fan activation or it be the only system requesting fan activation.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65211

SPN 996 *Trip Fan On Time Due to a Manual Switch*

Total time the fan has been on due to manual activation by the operator (i.e., excluding time on due to automatic triggers) since the last trip reset. For the time to be accumulated against the manual switch, it is necessary that it be the first to request the fan activation or it be the only system requesting fan activation.

Data Length: 4 bytes
Resolution: 0.05 hr/bit, 0 offset
Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65211

SPN 997 *Trip Fan On Time Due to the A/C System*

Total time the fan has been on due to the A/C system since the last trip reset. For the time to be accumulated against the A/C system, it is necessary that it be the first to request the fan activation or it be the only system requesting fan activation.

Data Length: 4 bytes
Resolution: 0.05 hr/bit, 0 offset
Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65211

SPN 998 *Trip Distance on VSL*

Total distance accumulated while the engine torque mode is road speed governing since the last trip reset.

Data Length: 4 bytes
Resolution: 0.125 km/bit, 0 offset
Data Range: 0 to 526,385,151.9 km Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65210

SPN 999 *Trip Gear Down Distance*

Total distance accumulated while the vehicle has operated in the gear which is one gear down from top gear and exceeds a calibrated minimum time (typically the time to shift the transmission) since the last trip reset.

Data Length: 4 bytes
Resolution: 0.125 km/bit, 0 offset
Data Range: 0 to 526,385,151.9 km Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65210

SPN 1000 *Trip Distance in Top Gear*

Total distance accumulated while the vehicle has operated in top gear for a calibrated minimum time since the last trip reset.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65210

SPN 1001 *Trip Drive Fuel Used*

Total fuel consumed while the engine speed is greater than zero, vehicle speed is greater than or equal to 2 km/h, and neither the PTO or the remote PTO is controlling the engine power output, since the last trip reset.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1007 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1002 *Trip PTO Moving Fuel Used*

Total fuel consumed while the PTO or remote PTO is in the hold state, the engine speed is greater than zero, and vehicle speed is greater than or equal to 2 km/h, since the last trip reset.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1008 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1003 *Trip PTO Non-moving Fuel Used*

Total fuel consumed while the PTO or remote PTO is in the hold state, the engine speed is greater than zero, and vehicle speed is less than 2 km/h, since the last trip reset.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1009 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1004 *Trip Vehicle Idle Fuel Used*

Total fuel consumed while neither the PTO or remote PTO is in the hold state, the engine speed is greater than zero, and vehicle speed is less than 2 km/h, since the last trip reset.

In marine applications, this parameter is defined as the total fuel consumed while the engine speed is greater than zero, and less than or equal to 50 RPM greater than low idle, since the last trip reset.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1010 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1005 *Trip Cruise Fuel Used*

Total fuel consumed while the engine is in the cruise hold state since the last trip reset. If both cruise control and VSL (vehicle speed limiter) are commanding the same amount of fuel, the cruise control is deemed the active torque mode and fuel will be accumulated in "trip cruise fuel used" parameter. If fuel commanded due to the accelerator pedal position is larger than fuel commanded by cruise control (e.g., accelerator override torque mode), the cruise control is not deemed the active torque mode and fuel will not be accumulated in the "trip cruise fuel used" parameter.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1011 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1006 *Trip Drive Fuel Economy*

Trip drive fuel economy is equal to the distance traveled by vehicle in the drive state (engine speed greater than zero, vehicle speed greater than or equal to 2 km/h, and neither the PTO or remote PTO is controlling engine power output) divided by trip drive fuel used (SPN 1001), since the last trip reset.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1012 for alternate resolution.

Data Length: 2 bytes

Resolution: 1/512 km/L per bit, 0 offset

Data Range: 0 to 125.5 km/L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65209

SPN 1007 *Trip Drive Fuel Used (Gaseous)*

Total fuel consumed while the engine speed is greater than zero, vehicle speed is greater than or equal to 2 km/h, and neither the PTO or the remote PTO is controlling the engine power output, since the last trip reset.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1001 for alternate resolution.

Data Length: 4 bytes
Resolution: 0.5 kg/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1008 *Trip PTO Moving Fuel Used (Gaseous)*

Total fuel consumed while the PTO or remote PTO is in the hold state, the engine speed is greater than zero, and vehicle speed is greater than or equal to 2 km/h, since the last trip reset.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1002 for alternate resolution.

Data Length: 4 bytes
Resolution: 0.5 kg/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1009 *Trip PTO Non-moving Fuel Used (Gaseous)*

Total fuel consumed while the PTO or remote PTO is in the hold state, the engine speed is greater than zero, and vehicle speed is less than to 2 km/h, since the last trip reset.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1003 for alternate resolution.

Data Length: 4 bytes
Resolution: 0.5 kg/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1010 *Trip Vehicle Idle Fuel Used (Gaseous)*

Total fuel consumed while neither the PTO or remote PTO is active, the engine speed is greater than zero, and vehicle speed is less than 2 km/h, since the last trip reset.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1004 for alternate resolution. Trip vehicle idle fuel while in fast idle (vehicle speed less than 2 km/h with engine speed greater than 700 rpm) shall be accumulated in the trip vehicle idle fuel category. All other fuel usage scenarios that do not fall directly in the categories defined shall be accumulated in trip drive fuel used.

Data Length: 4 bytes
Resolution: 0.5 kg/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1011 *Trip Cruise Fuel Used (Gaseous)*

Total fuel consumed while the engine is in the cruise hold state since the last trip reset. If both cruise control and VSL (vehicle speed limiter) are commanding the same amount of fuel, the cruise control is deemed the active torque mode and fuel will be accumulated in "trip cruise fuel used" parameter. If fuel commanded due to the accelerator pedal position is larger than fuel commanded by cruise control (e.g., accelerator override torque mode), the cruise control is not deemed the active torque mode and fuel will not be accumulated in the "trip cruise fuel used" parameter.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1005 for alternate resolution.

Data Length: 4 bytes
Resolution: 0.5 kg/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1012 *Trip Drive Fuel Economy (Gaseous)*

Trip drive fuel economy is equal to the distance traveled by vehicle in the drive state (engine speed greater than zero, vehicle speed greater than or equal to 2 km/h, and neither the PTO or remote PTO is controlling engine power output) divided by trip drive fuel used (SPN 1007), since the last trip reset.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1006 for alternate resolution.

Data Length: 2 bytes
Resolution: 1/512 km/kg per bit, 0 offset
Data Range: 0 to 125.5 km/kg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65208

SPN 1013 *Trip Maximum Engine Speed*

Maximum engine speed achieved since the last trip reset.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65207

SPN 1014 *Trip Average Engine Speed*

Average speed of the engine since the last trip reset.

NOTE—Excludes ignition-on time without the engine speed above zero. Includes idle, PTO (moving and non-moving), and drive operation.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 1014

PGN reference: 65207

SPN 1015 *Trip Drive Average Load Factor*

Average engine load factor while engine speed is greater than zero, vehicle speed is greater than or equal to 2 km/h, and both the PTO (moving/non-moving) and remote PTO are not in the hold state, since the last trip reset. Engine operation during cruise control operation is included.

In marine applications, this parameter is defined as the average engine load factor while engine speed is greater than zero, since last trip reset.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65207

SPN 1016 *Total Drive Average Load Factor*

Average engine load factor while engine speed is greater than zero, vehicle speed is greater than or equal to 2 km/h, and both the PTO (moving/non-moving) and remote PTO are not in the hold state, over the life of the engine. Engine operation during cruise control operation is included.

In marine applications, this parameter is defined as the average engine load factor while engine speed is greater than zero.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65207

SPN 1017 *Total Engine Cruise Time*

Total time that the engine has operated in the cruise hold state, excluding time in accelerator override, over the life of the engine.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65207

SPN 1018 *Trip Maximum Vehicle Speed*

Maximum vehicle speed achieved while the engine speed is greater than zero and the accelerator pedal position (APS) is at a value greater than 0%, since the last trip reset.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65206

SPN 1019 *Trip Cruise Distance*

Total distance that the engine has operated in the cruise hold state, excluding time in accelerator override, since the last trip reset.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65206

SPN 1020 *Trip Number of Hot Shutdowns*

Total number of hot shutdowns since the last trip reset. A hot shutdown is based on operation at high load or high engine speed or for long operating periods without allowing the engine to cool sufficiently.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65205

SPN 1021 *Trip Number of Idle Shutdowns*

Total number of times the engine has been shutdown due to idling too long (at normal idle or fast idle) since the last trip reset.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65205

SPN 1022 *Trip Number of Idle Shutdown Overrides*

Total number of times an operator disables idle shutdown to prevent an engine shutdown, since the last trip reset.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65205

SPN 1023 *Trip Sudden Decelerations*

Total number of decelerations whenever the vehicle deceleration is more than XYZ km/h/sec (where XYZ is a calibratable threshold), since the last trip reset. A lengthy deceleration shall be counted as one sudden deceleration.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65205

SPN 1024 *Trip Time in VSL*

Total time accumulated when the engine has operated on the vehicle speed limiter (VSL) while not in the cruise hold state, since the last trip reset. The engine torque mode is equal to road speed governor during this operation.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65204

SPN 1025 *Trip Time in Top Gear*

Total time accumulated when the vehicle has operated in top gear for a calibrated minimum time, since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65204

SPN 1026 *Trip Time in Gear Down*

Total time accumulated when the vehicle has operated in one gear down from the top gear for a calibrated minimum time, since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65204

SPN 1027 *Trip Time in Derate by Engine*

Total time accumulated when the engine final fueling has been derated due to an engine protection algorithm, since the last reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65204

SPN 1028 *Total Engine PTO Fuel Used*

Total fuel used while the PTO or remote PTO is in the hold state and engine speed is above zero, over the life of the engine.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1030 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65203

SPN 1029 *Trip Average Fuel Rate*

Average fuel rate, equal to trip fuel divided by trip time while the engine speed is above zero, since the last trip reset. This includes idle, PTO (both moving and non-moving) and drive operation but excludes ignition-on time while the engine speed is at zero rpm.

NOTE—This parameter is intended for liquid fueled engines. See SPN 1031 for alternate resolution.

Data Length: 2 bytes

Resolution: 0.05 L/h per bit, 0 offset

Data Range: 0 to 3,212.75 L/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65203

SPN 1030 *Total Engine PTO Fuel Used (Gaseous)*

Total fuel used while the PTO or remote PTO is in the hold state and engine speed is above zero, over the life of the engine.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1028 for alternate resolution.

Data Length: 4 bytes

Resolution: 0.5 kg/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 kg

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65202

SPN 1031 *Trip Average Fuel Rate (Gaseous)*

Average fuel rate, equal to trip fuel divided by trip time while the engine speed is above zero, since the last trip reset. This includes idle, PTO (both moving and non-moving) and drive operation but excludes ignition-on time while the engine speed is at zero rpm.

NOTE—This parameter is intended for gaseous fueled engines. See SPN 1029 for alternate resolution.

Data Length: 2 bytes

Resolution: 0.05 kg/h per bit, 0 offset

Data Range: 0 to 3212.75 kg/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65202

SPN 1032 *Total ECU Distance*

Total distance accumulated over the life of the ECU. When the ECU is replaced this value shall be reset.

Data Length: 4 bytes

Resolution: 0.125 km/bit, 0 offset

Data Range: 0 to 526,385,151.9 km

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65201

SPN 1033 *Total ECU Run Time*

Total time accumulated over the life of the ECU, from ignition switch ON to ignition switch OFF. When the ECU is replaced this value shall be reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65201

SPN 1034 *Trip Cruise Time*

Total time accumulated while the engine is in the cruise hold state, excluding time in accelerator override, since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65200

SPN 1035 *Trip PTO Time*

Total time accumulated while the engine is in the PTO or remote PTO hold state since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65200

SPN 1036 *Trip Engine Running Time*

Total time accumulated while the engine speed is greater than zero since the last trip reset. Note that time with the ignition switch on but engine speed at zero is not included.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65200

SPN 1037 *Trip Idle Time*

Total time accumulated while the engine speed is greater than zero, both the PTO and remote PTO is inactive, and the vehicle speed is less than 2 km/h, since the last trip reset.

In marine applications, this parameter is defined as the total time accumulated while the engine speed is greater than zero, and less than or equal to 50 RPM greater than low idle, since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65200

SPN 1038 *Trip Air Compressor On Time*

Total time that the air compressor is on and compressing air since the last trip reset.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65200

SPN 1039 *Trip Fuel (Gaseous)*

Total fuel consumed (trip drive fuel + trip PTO moving fuel + trip PTO non-moving fuel + trip idle fuel) since the last trip reset.

Data Length: 4 bytes

Resolution: 0.5 kg/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65199

SPN 1040 *Total Fuel Used (Gaseous)*

Total fuel consumed (trip drive fuel + trip PTO moving fuel + trip PTO non-moving fuel + trip idle fuel) over the life of the engine.

Data Length: 4 bytes

Resolution: 0.5 kg/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 kg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65199

SPN 1081 Engine Wait to Start Lamp

Lamp signal which indicates that the engine is too cold to start and the operator should wait until the signal becomes inactive (turns off).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 1082 Engine Coolant Load Increase

Status of an event, external to the engine, that may increase the nominal temperature of the engine coolant liquid.

00 - No coolant load increase
01 - Coolant load increase possible
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61440

SPN 1083 Auxiliary I/O Channel #1

Auxiliary channel of data (16 bit) read by the ECU. This data is in A/D counts and is manufacturer specific. It may be configured uniquely per application.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65241

SPN 1084 Auxiliary I/O Channel #2

Auxiliary channel of data (16 bit) read by the ECU. This data is in A/D counts and is manufacturer specific. It may be configured uniquely per application.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65241

SPN 1085 *Intended Retarder Percent Torque*

Braking torque of retarder that the retarder is currently trying to achieve. This value takes into account all static limitations, but not the limitations due to the dynamic behavior of the retarder. This value, if unchanged over a certain time, can and will be reached by the actual retarder - percent torque (See SPN 520).

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: -125 to 0 %
Type: Status
Supporting information: See Appendix D - SPN 1085
PGN reference: 61440

SPN 1086 *Parking and/or Trailer Air Pressure*

The pneumatic pressure in the circuit or reservoir for the parking brake and/or the trailer supply.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65198

SPN 1087 *Service Brake Air Pressure Circuit #1*

The pneumatic pressure in the service brake circuit or reservoir #1.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65198

SPN 1088 *Service Brake Air Pressure Circuit #2*

The pneumatic pressure in the service brake circuit or reservoir #2.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65198

SPN 1089 *Auxiliary Equipment Supply Pressure*

The pneumatic pressure in the auxiliary circuit.

Data Length: 1 byte

Resolution: 8 kPa/bit, 0 offset

Data Range: 0 to 2,000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65198

SPN 1090 *Air Suspension Supply Pressure*

The pneumatic pressure in the circuit for the electronically controlled air suspension system.

Data Length: 1 byte

Resolution: 8 kPa/bit, 0 offset

Data Range: 0 to 2,000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65198

SPN 1091 *Brake Application Pressure High Range, Front Axle, Left Wheel*

The brake application pressure for the left wheel on the front axle.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1092 *Brake Application Pressure High Range, Front Axle, Right Wheel*

The brake application pressure for the right wheel on the front axle.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1093 Brake Application Pressure High Range, Rear Axle #1, Left Wheel

The brake application pressure for the left wheel on the rear axle #1.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1094 Brake Application Pressure High Range, Rear Axle #1, Right Wheel

The brake application pressure for the right wheel on the rear axle #1.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1095 Brake Application Pressure High Range, Rear Axle #2, Left Wheel

The brake application pressure for the left wheel on the rear axle #2.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1096 Brake Application Pressure High Range, Rear Axle #2, Right Wheel

The brake application pressure for the right wheel on the rear axle #2.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1097 Brake Application Pressure High Range, Rear Axle #3, Left Wheel

The brake application pressure for the left wheel on the rear axle #3.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1098 Brake Application Pressure High Range, Rear Axle #3, Right Wheel

The brake application pressure for the right wheel on the rear axle #3.

Data Length: 1 byte

Resolution: 5 kPa/bit, 0 offset

Data Range: 0 to 1,250 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65197

SPN 1099 Brake Lining Remaining, Front Axle, Left Wheel

The percentage of brake lining which can still be measured for the left wheel on the front axle. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1100 Brake Lining Remaining, Front Axle, Right Wheel

The percentage of brake lining which can still be measured for the right wheel on the front axle. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1101 Brake Lining Remaining, Rear Axle #1, Left Wheel

The percentage of brake lining which can still be measured for the left wheel on the rear axle #1. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1102 Brake Lining Remaining, Rear Axle #1, Right Wheel

The percentage of brake lining which can still be measured for the right wheel on the rear axle #1. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1103 Brake Lining Remaining, Rear Axle #2, Left Wheel

The percentage of brake lining which can still be measured for the left wheel on the rear axle #2. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1104 Brake Lining Remaining, Rear Axle #2, Right Wheel

The percentage of brake lining which can still be measured for the right wheel on the rear axle #2. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1105 Brake Lining Remaining, Rear Axle #3, Left Wheel

The percentage of brake lining which can still be measured for the left wheel on the rear axle #3. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1106 Brake Lining Remaining, Rear Axle #3, Right Wheel

The percentage of brake lining which can still be measured for the right wheel on the rear axle #3. 100% represents new brake linings, 0% represents totally worn brake linings.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65196

SPN 1107 Engine Protection System Timer State

Status signal which indicates the current mode of the engine protection system timer system. See Figure SPN1107_A.

00 - Inactive

01 - Active

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 1107

PGN reference: 65252

SPN 1108 Engine Protection System Timer Override

Status signal which indicates the status of the override feature of the engine protection system timer. See Figure SPN1107_A.

00 - Inactive

01 - Active

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 1109 *Engine Protection System Approaching Shutdown*

Status signal which indicates that engine shutdown is imminent. This engine protection signal can be a result of different systems failing, i.e., engine overheating. See Figure SPN1107_A.

00 - Not approaching
01 - Approaching
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 1110 *Engine Protection System has Shutdown Engine*

Status signal which indicates whether or not the engine protection system has shutdown the engine. See Figure SPN1107_A.

00 - No
01 - Yes
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 1111 *Engine Protection System Configuration*

Parameter which indicates the configuration of the engine shutdown system.

00 - Disabled in calibration
01 - Enabled in calibration
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65252

SPN 1113 *Recommended Gear*

The transmission calculates this gear continuously. In dangerous situations this gear may be selected to gain back vehicle control.

Data Length: 1 byte

Resolution: 1 gear value/bit, -125 offset

Data Range: -125 to 125

Operational Range: -125 to +125, negative values are reverse gears, positive values are forward gears, zero is neutral. 251 (0xFB) is park.

Type: Status

Supporting information:

PGN reference: 65195

SPN 1114 *Lowest Possible Gear*

The transmission calculates this gear continuously. Together with the highest possible gear (see SPN 1115), it enables a management computer to know the exact range of available gears.

Data Length: 1 byte

Resolution: 1 gear value/bit, -125 offset

Data Range: -125 to 125

Operational Range: -125 to +125, negative values are reverse gears, positive values are forward gears, zero is neutral. 251 (0xFB) is park.

Type: Status

Supporting information:

PGN reference: 65195

SPN 1115 *Highest Possible Gear*

The transmission calculates this gear continuously. Together with the lowest possible gear (see SPN 1114), it enables a management computer to know the exact range of available gears.

Data Length: 1 byte

Resolution: 1 gear value/bit, -125 offset

Data Range: -125 to 125

Operational Range: -125 to +125, negative values are reverse gears, positive values are forward gears, zero is neutral. 251 (0xFB) is park.

Type: Status

Supporting information:

PGN reference: 65195

SPN 1116 *Engine Gaseous Fuel Correction Factor*

A correction to a predefined gaseous fuel energy (expressed in energy per unit volume) represented as a percentage. The actual fuel energy used to control the engine is the product of the gaseous fuel correction factor and the energy of the gas.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65194

SPN 1117 *Engine Desired Rated Exhaust Oxygen*

The desired amount of oxygen in the exhaust at rated conditions represented as a percentage by volume with respect to the total volume of exhaust gases leaving the engine.

Data Length: 2 bytes
Resolution: 0.0025 %/bit, 0 offset
Data Range: 0 to 160.6375 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65193

SPN 1118 *Engine Desired Exhaust Oxygen*

The desired amount of oxygen in the exhaust represented as a percentage by volume with respect to the total volume of exhaust gases leaving the engine.

Data Length: 2 bytes
Resolution: 0.0025 %/bit, 0 offset
Data Range: 0 to 160.6375 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65193

SPN 1119 *Engine Actual Exhaust Oxygen*

The actual amount of oxygen in the exhaust represented as a percentage by volume with respect to the total volume of exhaust gases leaving the engine.

Data Length: 2 bytes
Resolution: 0.0025 %/bit, 0 offset
Data Range: 0 to 160.6375 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65193

SPN 1120 *Articulation Angle*

Angle of deflection of an articulated transit vehicle. A right turn is indicated with a positive angle and a left turn is indicated with a negative angle.

Data Length: 1 byte
Resolution: 1 deg/bit, -125 deg offset
Data Range: -125 to 125 deg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65192

SPN 1121 *EBS Brake Switch*

Switch signal which indicates that the brake pedal is being pressed. The EBS brake switch is independent of the brake light switch and has no provisions for external connections.

00 - Brake pedal is not being pressed

01 - Brake pedal is being pressed

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 1122 *Engine Alternator Bearing 1 Temperature*

Temperature of the bearing inside the alternator. Bearing 1 is the left or rear bearing.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65191

SPN 1123 *Engine Alternator Bearing 2 Temperature*

Temperature of the bearing inside the alternator. Bearing 2 is the right or front bearing.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65191

SPN 1124 *Engine Alternator Winding 1 Temperature*

Temperature of the windings inside the alternator.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65191

SPN 1125 *Engine Alternator Winding 2 Temperature*

Temperature of the windings inside the alternator.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65191

SPN 1126 *Engine Alternator Winding 3 Temperature*

Temperature of the windings inside the alternator.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65191

SPN 1127 *Engine Turbocharger 1 Boost Pressure*

Gage pressure of air measured downstream of the compressor discharge side of the turbocharger. See also SPN 102 for alternate range and resolution. If there is only one boost pressure to report and the range and resolution in SPN 102 is adequate, then it should be used.

Data Length: 2 bytes

Resolution: 0.125 kPa/bit, 0 offset

Data Range: 0 to +8031.875 kPa (0 to Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65190

SPN 1128 *Engine Turbocharger 2 Boost Pressure*

Gage pressure of air measured downstream of the compressor discharge side of the turbocharger. See also SPN 102 for alternate range and resolution. If there is only one boost pressure to report and the range and resolution in SPN 102 is adequate, then it should be used.

Data Length: 2 bytes

Resolution: 0.125 kPa/bit, 0 offset

Data Range: 0 to +8031.875 kPa (0 to Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65190

SPN 1129 *Engine Turbocharger 3 Boost Pressure*

Gage pressure of air measured downstream of the compressor discharge side of the turbocharger. See also SPN 102 for alternate range and resolution. If there is only one boost pressure to report and the range and resolution in SPN 102 is adequate, then it should be used.

Data Length: 2 bytes
Resolution: 0.125 kPa/bit, 0 offset
Data Range: 0 to +8031.875 kPa (0 to Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65190

SPN 1130 *Engine Turbocharger 4 Boost Pressure*

Gage pressure of air measured downstream of the compressor discharge side of the turbocharger. See also SPN 102 for alternate range and resolution. If there is only one boost pressure to report and the range and resolution in SPN 102 is adequate, then it should be used.

Data Length: 2 bytes
Resolution: 0.125 kPa/bit, 0 offset
Data Range: 0 to +8031.875 kPa (0 to Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65190

SPN 1131 *Engine Intake Manifold 2 Temperature*

Temperature of pre-combustion air found in intake manifold of engine air supply system.

Data Length: 1 byte
Resolution: 1 deg C/bit, -40 deg C offset
Data Range: -40 to 210 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65189

SPN 1132 *Engine Intake Manifold 3 Temperature*

Temperature of pre-combustion air found in intake manifold of engine air supply system.

Data Length: 1 byte
Resolution: 1 deg C/bit, -40 deg C offset
Data Range: -40 to 210 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65189

SPN 1133 *Engine Intake Manifold 4 Temperature*

Temperature of pre-combustion air found in intake manifold of engine air supply system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65189

SPN 1134 *Engine Intercooler Thermostat Opening*

The current position of the thermostat used to regulate the temperature of the engine intercooler. A value of 0% represents the thermostat being completely closed and 100% represents the thermostat being completely open.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65262

SPN 1135 *Engine Oil Temperature 2*

Temperature of the engine lubricant.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65188

SPN 1136 *Engine ECU Temperature*

Temperature of the engine electronic control unit.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65188

SPN 1137 *Engine Exhaust Gas Port 1 Temperature*

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65187

SPN 1138 *Engine Exhaust Gas Port 2 Temperature*

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65187

SPN 1139 *Engine Exhaust Gas Port 3 Temperature*

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65187

SPN 1140 *Engine Exhaust Gas Port 4 Temperature*

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65187

SPN 1141 Engine Exhaust Gas Port 5 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65186

SPN 1142 Engine Exhaust Gas Port 6 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65186

SPN 1143 Engine Exhaust Gas Port 7 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65186

SPN 1144 Engine Exhaust Gas Port 8 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65186

SPN 1145 Engine Exhaust Gas Port 9 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65185

SPN 1146 Engine Exhaust Gas Port 10 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65185

SPN 1147 Engine Exhaust Gas Port 11 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65185

SPN 1148 Engine Exhaust Gas Port 12 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65185

SPN 1149 Engine Exhaust Gas Port 13 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65184

SPN 1150 Engine Exhaust Gas Port 14 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65184

SPN 1151 Engine Exhaust Gas Port 15 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65184

SPN 1152 Engine Exhaust Gas Port 16 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65184

SPN 1153 Engine Exhaust Gas Port 17 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65183

SPN 1154 Engine Exhaust Gas Port 18 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65183

SPN 1155 Engine Exhaust Gas Port 19 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65183

SPN 1156 Engine Exhaust Gas Port 20 Temperature

Temperature at the cylinder exhaust port of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65183

SPN 1157 *Engine Main Bearing 1 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65182

SPN 1158 *Engine Main Bearing 2 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65182

SPN 1159 *Engine Main Bearing 3 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65182

SPN 1160 *Engine Main Bearing 4 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65182

SPN 1161 *Engine Main Bearing 5 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65181

SPN 1162 *Engine Main Bearing 6 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65181

SPN 1163 *Engine Main Bearing 7 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65181

SPN 1164 *Engine Main Bearing 8 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65181

SPN 1165 *Engine Main Bearing 9 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65180

SPN 1166 *Engine Main Bearing 10 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65180

SPN 1167 *Engine Main Bearing 11 Temperature*

Temperature of the main bearing which supports the crankshaft of the engine.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65180

SPN 1168 *Engine Turbocharger Lube Oil Pressure 2*

Gage pressure of oil in turbocharger lubrication system.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65179

SPN 1169 *Engine Turbocharger 2 Speed*

Rotational velocity of rotor in the turbocharger.

Data Length: 2 bytes

Resolution: 4 rpm/bit, 0 offset

Data Range: 0 to 257,020 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65179

SPN 1170 *Engine Turbocharger 3 Speed*

Rotational velocity of rotor in the turbocharger.

Data Length: 2 bytes

Resolution: 4 rpm/bit, 0 offset

Data Range: 0 to 257,020 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65179

SPN 1171 *Engine Turbocharger 4 Speed*

Rotational velocity of rotor in the turbocharger.

Data Length: 2 bytes

Resolution: 4 rpm/bit, 0 offset

Data Range: 0 to 257,020 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65179

SPN 1172 *Engine Turbocharger 1 Compressor Inlet Temperature*

Temperature of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65178

SPN 1173 *Engine Turbocharger 2 Compressor Inlet Temperature*

Temperature of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65178

SPN 1174 *Engine Turbocharger 3 Compressor Inlet Temperature*

Temperature of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65178

SPN 1175 *Engine Turbocharger 4 Compressor Inlet Temperature*

Temperature of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65178

SPN 1176 *Engine Turbocharger 1 Compressor Inlet Pressure*

Gage pressure of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65177

SPN 1177 Engine Turbocharger 2 Compressor Inlet Pressure

Gage pressure of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65177

SPN 1178 Engine Turbocharger 3 Compressor Inlet Pressure

Gage pressure of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65177

SPN 1179 Engine Turbocharger 4 Compressor Inlet Pressure

Gage pressure of the air entering the compressor side of the turbocharger.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65177

SPN 1180 Engine Turbocharger 1 Turbine Inlet Temperature

Temperature of the combustion by-products entering the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65176

SPN 1181 *Engine Turbocharger 2 Turbine Inlet Temperature*

Temperature of the combustion by-products entering the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65176

SPN 1182 *Engine Turbocharger 3 Turbine Inlet Temperature*

Temperature of the combustion by-products entering the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65176

SPN 1183 *Engine Turbocharger 4 Turbine Inlet Temperature*

Temperature of the combustion by-products entering the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65176

SPN 1184 *Engine Turbocharger 1 Turbine Outlet Temperature*

Temperature of the combustion by-products exiting the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65175

SPN 1185 Engine Turbocharger 2 Turbine Outlet Temperature

Temperature of the combustion by-products exiting the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65175

SPN 1186 Engine Turbocharger 3 Turbine Outlet Temperature

Temperature of the combustion by-products exiting the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65175

SPN 1187 Engine Turbocharger 4 Turbine Outlet Temperature

Temperature of the combustion by-products exiting the turbine side of the turbocharger.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65175

SPN 1188 Engine Turbocharger 1 Wastegate Drive

Position of the wastegate drive. A value of 0% represents fully closed and a value of 100% represents fully open.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65174

SPN 1189 *Engine Turbocharger 2 Wastegate Drive*

Position of the wastegate drive. A value of 0% represents fully closed and a value of 100% represents fully open.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65174

SPN 1190 *Engine Turbocharger 3 Wastegate Drive*

Position of the wastegate drive. A value of 0% represents fully closed and a value of 100% represents fully open.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65174

SPN 1191 *Engine Turbocharger 4 Wastegate Drive*

Position of the wastegate drive. A value of 0% represents fully closed and a value of 100% represents fully open.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65174

SPN 1192 *Engine Turbocharger Wastegate Actuator Control Air Pressure*

Gage pressure of the air used to control the actuator which opens and closes the wastegate valve.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65174

SPN 1193 *Engine Operation Time Since Rebuild*

The time in engine operation since the last engine rebuild.

Data Length: 4 bytes

Resolution: 1 s/bit, 0 offset

Data Range: 0 to 4,211,081,215 s Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65173

SPN 1194 *Anti-theft Encryption Seed Present Indicator*

Indicates the presence of the encryption seed random number.

00 - Random number is not present

01 - Random number is present

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56320

SPN 1195 *Anti-theft Password Valid Indicator*

Indicates the presence of a validated password.

00 - Password is not a validated password

01 - Password is a validated password

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56320

SPN 1196 *Anti-theft Component Status States*

Indicates whether or not the component can be started.

00 Unlocked
01 Locked
10 Blocked
11 Not defined

00b - Unlocked = This state indicates that the component can be started without the end user being required to enter a password.

01b - Locked = This state indicates that the component can NOT be started (i.e., Unlocked) without the end user being required to enter a password.

10b - Blocked = This state indicates that a Lock or Unlock command cannot be executed because some other algorithm or command of higher priority is commanding differently.

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 56320

SPN 1197 *Anti-theft Modify Password States*

This parameter is used to indicate whether a password request was successfully performed, or if the request could not be perform due to system constraints or if the request was not a valid request.

00 Ok
01 Full_of_Passwords
10 Empty_of_Passwords
11 Not_valid

00b - Ok = This state indicates that the request was successfully performed.

01b - Full_Of_Passwords = This state indicates that the component can NOT store any additional passwords in its memory.

10b - Empty_Of_Passwords = This state indicates that the component would be empty of passwords (an unacceptable condition) if the password under which the end user is logged in, is deleted. Thus the delete password command is not successfully executed.

Note that if the Delete_Password command is sent to a component that does not currently have a password the Empty_Of_Passwords state indicator shall be used.

11b - Not_Valid = This state indicates that the request is not a valid one.

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 56320

SPN 1198 *Anti-theft Random Number*

A seven byte random numeric code provided by the component in response to an anti-theft request. This parameter is sent as a numeric value utilizing the full range of 0 to 0xFFFFFFFFFFFFFFF. The most significant byte is sent first, not following the rules of Table 1.

Data Length: 7 bytes

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56320

SPN 1199 *Anti-theft Encryption Indicator States*

This parameter is used to indicate if a random number seed is being requested, or if an encrypted password is being provided to the component.

00 Encryption_Seed_Request

01 Encrypted_Code_Present

10 Not defined

11 Not_Available

00b - Encryption_Seed_Request = This state represents a request to the component to provide a random number seed.

01b - Encrypted_Code_Present = This state is used to indicate that an encrypted password is being provided to the component.

11b - Not_Available = This state is used to indicate that a random number is NOT being requested nor is an encrypted password being provided to the component.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56576

SPN 1200 *Anti-theft Desired Exit Mode States*

This parameter is used to specify the desired triggers that are to be used by the component in deciding when to transition to the Locked state.

00 Lock_Upon_Operator_Request
01 Lock_When_Key_Off
10 Not defined
11 Not_Available

00b - Lock_Upon_Operator_Request—This state is used to indicate that the end user would have to manually enter a password to Lock the engine.

01b - Lock_When_Keyoff—This state is used to indicate that the component would automatically transition to the Locked state when the end user turns off the engine (i.e. without the end user being required to manually enter the password).

11b - Not_Available—This state indicates that the option is not selectable or changeable by the operator via using current tool.

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 56576

SPN 1201 *Anti-theft Command States*

This parameter is used to identify the specific requests being sent to the component.

000 Add_Password
001 Delete_Password
010 Change_Password
011 Lock_or_Unlock
100 Check_Status
101 Login
110-111 Not defined

000b - Add_Password—This state represents a request to the component to add a password to the list of passwords that the component has stored as valid codes. This command will not be performed if the component has already stored the maximum number of passwords that it is capable of storing. The Login command must precede this command.

001b - Delete_Password—This state represents a request to the component to delete the password (the same one used when the end-user logged in). See SPN 1197 for limitations.

010b - Change_Password—This state represents a request to the component to change the password (the same one that the end-user logged in with) to a different password, which is to be specified by the end user. The Login command must precede this command.

011b - Lock_Or_Unlock—This state represents a request to the component to change from the Locked state to the Unlocked state or from the Unlocked state to the Locked state.

100b - Check_Status—This state represents a request to check to see if the component is in the Locked or Unlocked state.

101b - Login—This state represents a request to validate the end user, before performing commands such as Add_Password and Change_Password.

Data Length: 3 bits
Resolution: 8 states/3 bit, 0 offset
Data Range: 0 to 7 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 56576

SPN 1202 *Anti-theft Password Representation*

This parameter is the seven byte numeric code (i.e., 'encrypted password' or 'key') that is generated based on the encryption algorithm, the password supplied by the end user, and the random number seed given by the component. This parameter is sent as a numeric value utilizing the full range of 0 to 0xFFFFFFFFFFFFFFF. The most significant byte is sent first, not following the rules of Table 1.

Data Length: 7 bytes
Resolution: ASCII, 0 offset
Data Range: 0 to 255 per byte Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 56576

SPN 1203 *Engine Auxiliary Coolant Pressure*

Gage pressure of coolant found in the intercooler which is located after the turbocharger.

Data Length: 1 byte
Resolution: 4 kPa/bit, 0 offset
Data Range: 0 to 1000 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65172

SPN 1204 *Electrical Load*

Electrical power delivered by the engine to the electrical system connected to the generator.

Data Length: 2 bytes
Resolution: 0.5 kW/bit, 0 offset
Data Range: 0 to 32,127.5 kW Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65171

SPN 1205 *Safety Wire Status*

Status signal which indicates that the safety wire has been activated. When the safety wire is activated, the engine will not operate. This is used for maintenance purposes.

00 - Safety wire has not been activated
01 - Safety wire has been activated
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65171

SPN 1207 Engine ECU Temperature (OBSOLETE use SPN 1136)

Temperature of the engine electronic control unit.

(21, 1207 are not to be used - obsolete)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 1208 Engine Pre-filter Oil Pressure

Gage pressure of the engine oil before the oil reaches the oil filter.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65170

SPN 1209 Engine Exhaust Gas Pressure

Gage pressure of the exhaust gasses as measured at the turbine inlet of the turbocharger.

Data Length: 2 bytes

Resolution: 1/128 kPa/bit, -250 kPa offset

Data Range: -250 kPa TO 251.99 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65170

SPN 1210 Engine Fuel Rack Position

Measured position of the engine fuel rack. A value of 0% rack represents no fueling and a value of 100% rack represents maximum fueling.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65170

SPN 1211 *Engine Build Hours Reset*

Command signal used to reset the engine rebuild hours.

00 Do not reset
01 Reset
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 56832

SPN 1212 *Engine Auxiliary Coolant Temperature*

Temperature of coolant found in the intercooler which is located after the turbocharger.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65172

SPN 1237 *Engine Shutdown Override Switch*

Switch signal which indicates the position of the engine shutdown override switch. This switch function allows the operator to override an impending engine shutdown.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65265

SPN 1238 *Traction Control Override Switch*

Switch signal which indicates the position of the traction control override switch. The traction control override signal disables the automatic traction control function allowing the wheels to spin.

00 - Off
01 - On
10 - Error
11 - Not available or not installed

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 1239 *Engine Fuel Leakage 1*

Status signal which indicates fuel leakage in the fuel rail of the engine. Location can be either before or after the fuel pump.

00 - no leakage detected
01 - leakage detected
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65169

SPN 1240 *Engine Fuel Leakage 2*

Status signal which indicates fuel leakage in the fuel rail of the engine. Location can be either before or after the fuel pump.

00 - no leakage detected
01 - leakage detected
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65169

SPN 1241 (R) Engine Gas Mass Flow Rate 1

Gas mass flow rate delivered to an engine through its first fuel control system. See SPN 3467 for the second fuel control system.

Data Length: 2 bytes

Resolution: 0.05 kg/h per bit, 0 offset

Data Range: 0 to 3212.75 kg/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65170

SPN 1242 Instantaneous Estimated Brake Power

Estimate of the power developed by the engine.

Data Length: 2 bytes

Resolution: 0.5 kW/bit, 0 offset

Data Range: 0 to 32,127.5 kW

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65170

SPN 1243 ABS Fully Operational

Signal which indicates whether an ABS system is fully operational or whether its functionality is reduced by a defect or by an intended action (e.g., by activation of an ABS-off-road switch or during special diagnostic procedures). There are cases where the signal is necessary to fulfill legal regulations for special applications (e.g., switching off integrated retarders).

00 - Not Fully Operational

01 - Fully Operational

10 - Reserved

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 1244 (R) Engine Fuel Actuator 2 Control Command

The control command to fuel actuator 2, normalized to percent, where 0% represents fully closed and 100% represents fully open. Typically, this fuel actuator is used to regulate low pressure natural gas flow rate, mixing into the air flow, which together then come into the engine. Using the standard convention for determining the position. Left/front is #1 (SPN 633) and right/rear is #2.

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: 0 to 100%

Type: Status

Supporting information:

PGN reference: 61466

SPN 1246 *Number of Engine Torque History Records*

Number of torque history records contained in the engine torque history PGN. A value of 0 is broadcast if no torque history records are stored in the ECU.

Data Length: 1 byte

Resolution: 1 record/bit, 0 offset

Data Range: 0 to 250 records

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1247 *Engine Power*

Advertised engine power capability. Advertised power is what a customer will find on a sales sheet for an engine with a certain calibration.

Data Length: 2 bytes

Resolution: 0.5 kW/bit, 0 offset

Data Range: 0 to 32,127.5 kW

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1248 *Engine Peak Torque 1*

Maximum torque output of the current ECU calibration when the engine operates on torque curve 1. For calibrations that support two torque curves, this parameter shall be assigned the value of the lower curve. For calibrations that support only one curve, this parameter should be used.

Data Length: 2 bytes

Resolution: 1 Nm/bit, 0 offset

Data Range: 0 to 64,255 Nm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1249 *Engine Peak Torque 2*

Maximum torque output of the current ECU calibration when the engine operates on torque curve 2. For calibrations that support two torque curves, this parameter shall be assigned the value of the higher curve. For calibrations that support only one curve, this parameter should be set to "not available".

Data Length: 2 bytes

Resolution: 1 Nm/bit, 0 offset

Data Range: 0 to 64,255 Nm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1250 Calibration Record Start Month

Calendar month timestamp when an ECU record was established.

NOTE - A value of 0 for the month is null. The value 1 identifies January; 2 identifies February; etc.

Data Length: 1 byte

Resolution: 1 month/bit, 0 offset

Data Range: 0 to 250 months

Operational Range: 1 to 12 month

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1251 Calibration Record Start Day

Calendar day timestamp when an ECU record was established.

NOTE - A value of 0 for the date is null. The values 1, 2, 3, and 4 are used to identify the first day of the month; 5, 6, 7, and 8 identify the second day of the month; etc.

Data Length: 1 byte

Resolution: 0.25 days/bit, 0 offset

Data Range: 0 to 62.5 days

Operational Range: 0.25 to 31.75 day

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1252 Calibration Record Start Year

Calendar year timestamp when an ECU record was established.

NOTE - A value of 0 for the year identifies the year 1985; a value of 1 identifies 1986; etc.

Data Length: 1 byte

Resolution: 1 year/bit, 1985 years offset

Data Range: 1985 to 2235 years

Operational Range: 1985 to 2235 year

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1253 Calibration Record Duration Time

Duration in hours for which the engine operated in the conditions captured in the current record.

Data Length: 4 bytes

Resolution: 0.05 hr/bit, 0 offset

Data Range: 0 to 210,554,060.75 hr

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1254 *Torque Limiting Feature Status*

Status of an ECU feature which limits the torque output of the engine.

00 - Disabled
01 - Enabled
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65168

SPN 1255 *Transmission Gear Ratio 1*

Gear ratio value stored in the ECU that is used to define a range of transmission gears for which a limit is applied to the engine output torque. Transmission gear ratio 1 should be the numerically highest transmission gear ratio breakpoint that defines ratio ranges for torque limits.

Data Length: 2 bytes

Resolution: 0.01/bit, 0 offset

Data Range: 0 to 642.55

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1256 *Engine Torque Limit 1, Transmission*

Limit applied to the engine output torque during vehicle operation in transmission gear ratios numerically greater than transmission gear ratio 1 (see SPN 1255).

Data Length: 2 bytes

Resolution: 1 Nm/bit, 0 offset

Data Range: 0 to 64,255 Nm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1257 *Transmission Gear Ratio 2*

Gear ratio value stored in the ECU that is used to define a range of transmission gears for which a limit is applied to the engine output torque. Transmission gear ratio 2 should be the numerically highest transmission gear ratio breakpoint less than transmission gear ratio 1 (see SPN 1255) that defines ratio ranges for torque limits.

Data Length: 2 bytes

Resolution: 0.01/bit, 0 offset

Data Range: 0 to 642.55

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1258 *Engine Torque Limit 2, Transmission*

Limit applied to the engine output torque during vehicle operation in transmission gear ratios numerically less than or equal to transmission gear ratio 1 (see SPN 1255) and numerically greater than transmission gear ratio 2 (see SPN 1257). For example, with transmission gear ratio 1 equal to 12.0:1 and transmission gear ratio 2 equal to 5.0:1, vehicle operation in a transmission gear with a ratio of 6.0:1 will result in the application of engine torque limit 2, transmission.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65168

SPN 1259 *Transmission Gear Ratio 3*

Gear ratio value stored in the ECU that is used to define a range of transmission gears for which a limit is applied to the engine output torque. Transmission gear ratio 3 should be the numerically highest transmission gear ratio breakpoint less than transmission gear ratio 2 (see SPN 1257) that defines ratio ranges for torque limits.

Data Length: 2 bytes
Resolution: 0.01/bit, 0 offset
Data Range: 0 to 642.55 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65168

SPN 1260 *Engine Torque Limit 3, Transmission*

Limit applied to the engine output torque during vehicle operation in transmission gear ratios numerically less than or equal to transmission gear ratio 2 (see SPN 1257) and numerically greater than transmission gear ratio 3 (see SPN 1259). For example, with transmission gear ratio 2 equal to 5.0:1 and transmission gear ratio 3 equal to 2.0:1, vehicle operation in a transmission gear with a ratio of 3.0:1 will result in the application of engine torque limit 3, transmission.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65168

SPN 1261 *Engine Torque Limit 4, Transmission*

Limit applied to the engine output torque during vehicle operation in transmission gear ratios numerically less than or equal to transmission gear ratio 3 (see SPN 1259).

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65168

SPN 1262 Engine Torque Limit 5, Switch

Limit applied to the engine output torque based on activation of an ECU switch input.

Data Length: 2 bytes

Resolution: 1 Nm/bit, 0 offset

Data Range: 0 to 64,255 Nm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1263 Engine Torque Limit 6, Axle Input

Limit applied to the engine output torque based on the maximum allowable axle input torque. Axle input torque is calculated as the current engine torque output multiplied by the transmission gear ratio.

Data Length: 2 bytes

Resolution: 2 Nm/bit, 0 offset

Data Range: 0 to 128,510 Nm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65168

SPN 1264 Engine Extended Crankcase Blow-by Pressure - duplicate (see SPN 22)

Differential crankcase blow-by pressure as measured through a tube with a venturi.

(1264 not to be used – obsolete)

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 1320 Engine External Shutdown Air Supply Pressure

Pressure of the air used to shut off the fuel supply to the engine.

Data Length: 2 bytes

Resolution: 0.5 kPa/bit, 0 offset

Data Range: 0 to 32,127.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65167

SPN 1349 *Engine Injector Metering Rail 2 Pressure*

The gage pressure of fuel in the metering rail #2 as delivered from the supply pump to the injector metering inlet. See Figure SPN16_A for fuel system related parameters. Although the figure does not show rail #2 it does show the relationship of rail pressure to other signals.

Data Length: 2 bytes
Resolution: 1/256 MPa/bit, 0 offset
Data Range: 0 to 251 MPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65243

SPN 1350 *Time Since Last Service*

The vehicle operation time since the last service was performed. The type of service information is identified by the service component identification number.

Data Length: 2 bytes
Resolution: 1 hr/bit, -32,127 hr offset
Data Range: -32,127 to 32,128 hr Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65166

SPN 1351 (R) *Air Compressor Status*

Indicates whether the air compressor is actively compressing air.

00 Compressor not active
01 Compressor active
10 Error indicator
11 Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65198

SPN 1352 (R) *Engine Cylinder 1 Knock Level*

Used to indicate the level of knock for engine cylinder 1. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte
Resolution: 1 %/bit, 0 offset
Data Range: 0 to 250 % Operational Range: 0 to 100%
Type: Status
Supporting information:
PGN reference: 61463

SPN 1353 (R) Engine Cylinder 2 Knock Level

Used to indicate the level of knock for engine cylinder 2. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1354 (R) Engine Cylinder 3 Knock Level

Used to indicate the level of knock for engine cylinder 3. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1355 (R) Engine Cylinder 4 Knock Level

Used to indicate the level of knock for engine cylinder 4. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1356 (R) Engine Cylinder 5 Knock Level

Used to indicate the level of knock for engine cylinder 5. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1357 (R) Engine Cylinder 6 Knock Level

Used to indicate the level of knock for engine cylinder 6. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1358 (R) Engine Cylinder 7 Knock Level

Used to indicate the level of knock for engine cylinder 7. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1359 (R) Engine Cylinder 8 Knock Level

Used to indicate the level of knock for engine cylinder 8. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61463

SPN 1360 (R) Engine Cylinder 9 Knock Level

Used to indicate the level of knock for engine cylinder 9. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1361 (R) Engine Cylinder 10 Knock Level

Used to indicate the level of knock for engine cylinder 10. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1362 (R) Engine Cylinder 11 Knock Level

Used to indicate the level of knock for engine cylinder 11. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1363 (R) Engine Cylinder 12 Knock Level

Used to indicate the level of knock for engine cylinder 12. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1364 (R) Engine Cylinder 13 Knock Level

Used to indicate the level of knock for engine cylinder 13. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1365 (R) Engine Cylinder 14 Knock Level

Used to indicate the level of knock for engine cylinder 14. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1366 (R) Engine Cylinder 15 Knock Level

Used to indicate the level of knock for engine cylinder 15. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1367 (R) Engine Cylinder 16 Knock Level

Used to indicate the level of knock for engine cylinder 16. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61464

SPN 1368 (R) Engine Cylinder 17 Knock Level

Used to indicate the level of knock for engine cylinder 17. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1369 (R) Engine Cylinder 18 Knock Level

Used to indicate the level of knock for engine cylinder 18. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1370 (R) Engine Cylinder 19 Knock Level

Used to indicate the level of knock for engine cylinder 19. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1371 (R) Engine Cylinder 20 Knock Level

Used to indicate the level of knock for engine cylinder 20. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1372 (R) Engine Cylinder 21 Knock Level

Used to indicate the level of knock for engine cylinder 21. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1373 (R) Engine Cylinder 22 Knock Level

Used to indicate the level of knock for engine cylinder 22. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1374 (R) Engine Cylinder 23 Knock Level

Used to indicate the level of knock for engine cylinder 23. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1375 (R) Engine Cylinder 24 Knock Level

Used to indicate the level of knock for engine cylinder 24. The level of knock is reported using a relative scale where 0% is least level of knock, and increasing levels indicate more knock until 100% indicates the most severe level of knock allowed or measurable for the engine.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61465

SPN 1376 Battery 2 Potential (Voltage) (duplicate - see also SPN 444)

The voltage for isolated battery #2.

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 1377 Engine Synchronization Switch

This is the On/Off operation of the Multiple Unit Synchronization functionality. When it is enabled (i.e. On) the master engine will synchronize one or more slave engines to operate at the same speed. This switch position indicates whether this feature is disabled (off) or enabled (on).

00 Functionality is disabled (off)
01 Functionality is enabled (on)
10 Error
11 Not available or Unused

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64971

SPN 1379 Service Component Identification

Identification of component needing service. See Table SPN911_A.

Data Length: 1 byte
Resolution: 1 ID/bit, 0 offset
Data Range: 0 to 250 ID Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65166

SPN 1380 Engine Oil Level Remote Reservoir

Ratio of current volume of engine oil in a remote reservoir to the maximum required volume. If a single switch (on/off) is used, 20% and 100% respectively will be used where 100% means no oil needs to be added and 20% means oil needs to be added. If two switches are used, 20%, 50%, and 100% will be used where 20% indicates the oil is critically low, 50% indicates the oil level is low, and 100% means no oil needs to be added. For continuous sensors, the actual measured percent will be used.

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65130

SPN 1381 Engine Fuel Supply Pump Inlet Pressure

Absolute pressure of fuel at the fuel supply pump inlet. See Figures SPN16_A & SPN16_B

Data Length: 1 byte
Resolution: 2 kPa/bit, 0 offset
Data Range: 0 to 500 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65130

SPN 1382 Engine Fuel Filter (suction side) Differential Pressure

Differential pressure measured across the fuel filter located between the fuel tank and the supply pump. See Figures SPN16_A and SPN16_B.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65130

SPN 1385 Auxiliary Temperature #1 (duplicate see also SPN 441)

Temperature measured by auxiliary temperature sensor #1 or #2. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 1386 Auxiliary Temperature #2 (duplicate see also SPN 442)

Temperature measured by auxiliary temperature sensor #1 or #2. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference:

SPN 1387 Auxiliary Pressure #1

Pressure measured by auxiliary pressure sensor #1. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65164

SPN 1388 *Auxiliary Pressure #2*

Pressure measured by auxiliary pressure sensor #2. Not to be used in place of existing SPNs.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65164

SPN 1389 *Engine Fuel Specific Gravity*

This parameter conveys the specific gravity of the gaseous fuel being used by the engine. The specific gravity of the fuel can then be used to compute the density of the fuel.

Data Length: 2 bytes

Resolution: 0.0001/bit, 0 offset

Data Range: 0 to 6.4255

Operational Range: 0 to 2.0000

Type: Status

Supporting information:

PGN reference: 65202

SPN 1390 (R) *Engine Fuel Valve 1 Inlet Absolute Pressure*

The absolute pressure of gas on the inlet side of the first system control valve. See SPN 3466 for Engine Fuel Valve 2.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65163

SPN 1391 *Engine Fuel Valve Differential Pressure*

The differential pressure between the inlet and the outlet of a gaseous fuel valve.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65163

SPN 1392 *Engine Air to Fuel Differential Pressure*

The differential pressure between the gaseous fuel and the air intake manifold.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65163

SPN 1393 *Engine Cylinder #1 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1394 *Engine Cylinder #2 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1395 *Engine Cylinder #3 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1396 Engine Cylinder #4 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1397 Engine Cylinder #5 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1398 Engine Cylinder #6 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1399 Engine Cylinder #7 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1400 Engine Cylinder #8 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65160

SPN 1401 Engine Cylinder #9 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1402 Engine Cylinder #10 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1403 Engine Cylinder #11 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1404 Engine Cylinder #12 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1405 Engine Cylinder #13 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1406 Engine Cylinder #14 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1407 Engine Cylinder #15 Ignition Transformer Secondary Output

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1408 *Engine Cylinder #16 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65161

SPN 1409 *Engine Cylinder #17 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65162

SPN 1410 *Engine Cylinder #18 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65162

SPN 1411 *Engine Cylinder #19 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65162

SPN 1412 *Engine Cylinder #20 Ignition Transformer Secondary Output*

This parameter indicates the relative intensity of the secondary output voltage of the ignition transformer.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65162

SPN 1413 *Engine Cylinder #1 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65154

SPN 1414 *Engine Cylinder #2 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65154

SPN 1415 *Engine Cylinder #3 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65154

SPN 1416 *Engine Cylinder #4 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65154

SPN 1417 *Engine Cylinder #5 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65155

SPN 1418 *Engine Cylinder #6 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65155

SPN 1419 *Engine Cylinder #7 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65155

SPN 1420 *Engine Cylinder #8 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65155

SPN 1421 *Engine Cylinder #9 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65156

SPN 1422 *Engine Cylinder #10 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65156

SPN 1423 *Engine Cylinder #11 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65156

SPN 1424 Engine Cylinder #12 Ignition Timing

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65156

SPN 1425 Engine Cylinder #13 Ignition Timing

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65157

SPN 1426 Engine Cylinder #14 Ignition Timing

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65157

SPN 1427 Engine Cylinder #15 Ignition Timing

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65157

SPN 1428 *Engine Cylinder #16 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65157

SPN 1429 *Engine Cylinder #17 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65158

SPN 1430 *Engine Cylinder #18 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65158

SPN 1431 *Engine Cylinder #19 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65158

SPN 1432 *Engine Cylinder #20 Ignition Timing*

The ignition timing of the cylinder.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65158

SPN 1433 *Engine Desired Ignition Timing #1*

A programmable timing value specific to the engine's application. Factors affecting this value include both fuel type and the nature of the load being driven.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65159

SPN 1434 *Engine Desired Ignition Timing #2*

A programmable timing value specific to the engine's application. Factors affecting this value include both fuel type and the nature of the load being driven.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65159

SPN 1435 *Engine Desired Ignition Timing #3*

A programmable timing value specific to the engine's application. Factors affecting this value include both fuel type and the nature of the load being driven.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65159

SPN 1436 *Engine Actual Ignition Timing*

The actual ignition timing at the current engine conditions. This parameter may or may not be equal to one of the desired timing parameters (see SPNs 1433-1435), depending on the status of the engine.

Data Length: 2 bytes

Resolution: 1/128 deg/bit, -200 deg offset

Data Range: -200 to 301.99 deg

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65159

SPN 1437 *Road Speed Limit Status*

Status (active or not active) of the system used to limit maximum vehicle velocity.

00 - Active

01 - Not Active

10 - Error

11 - Not available

NOTE - While somewhat inconsistent with other J1939 status parameters, the states defining 00 = active and 01 = inactive for Road Speed Limit Status are NOT typographical errors, and should be implemented as stated.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61443

SPN 1438 *ABS/EBS Amber Warning Signal (Powered Vehicle)*

This parameter commands the ABS/EBS amber/yellow optical warning signal

00 Off

01 On

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 1439 EBS Red Warning Signal

This parameter commands the EBS red optical warning signal

00 Off
01 On
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 1440 Engine Fuel Flow Rate 1

The rate at which the fuel is flowing through a fuel valve.

Data Length: 2 bytes

Resolution: 0.1 m³/h per bit, 0 offset

Data Range: 0 to 6425.5 m³/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65153

SPN 1441 Engine Fuel Flow Rate 2

The rate at which the fuel is flowing through a fuel valve.

Data Length: 2 bytes

Resolution: 0.1 m³/h per bit, 0 offset

Data Range: 0 to 6425.5 m³/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65153

SPN 1442 Engine Fuel Valve 1 Position

The position of a gaseous fuel valve that is metering the fuel flow to the engine. 0% indicates no fuel flow through valve and 100% means maximum fuel flow through valve.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65153

SPN 1443 *Engine Fuel Valve 2 Position*

The position of a gaseous fuel valve that is metering the fuel flow to the engine. 0% indicates no fuel flow through valve and 100% means maximum fuel flow through valve.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65153

SPN 1444 *Engine Cylinder #1 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65147

SPN 1445 *Engine Cylinder #2 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65147

SPN 1446 *Engine Cylinder #3 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65147

SPN 1447 Engine Cylinder #4 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65147

SPN 1448 Engine Cylinder #5 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65148

SPN 1449 Engine Cylinder #6 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65148

SPN 1450 Engine Cylinder #7 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65148

SPN 1451 *Engine Cylinder #8 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65148

SPN 1452 *Engine Cylinder #9 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65149

SPN 1453 *Engine Cylinder #10 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65149

SPN 1454 *Engine Cylinder #11 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65149

SPN 1455 *Engine Cylinder #12 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65149

SPN 1456 *Engine Cylinder #13 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65150

SPN 1457 *Engine Cylinder #14 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65150

SPN 1458 *Engine Cylinder #15 Combustion Time*

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65150

SPN 1459 Engine Cylinder #16 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65150

SPN 1460 Engine Cylinder #17 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65151

SPN 1461 Engine Cylinder #18 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65151

SPN 1462 Engine Cylinder #19 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65151

SPN 1463 Engine Cylinder #20 Combustion Time

The amount of time from when the ignition of the fuel is initiated to when the fuel is completely ignited (i.e., the flame front has propagated across the cylinder).

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65151

SPN 1464 Engine Desired Combustion Time

The desired combustion time based upon engine load and speed lookup maps.

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65152

SPN 1465 Engine Average Combustion Time

The average combustion time of all cylinders of an engine.

Data Length: 2 bytes

Resolution: 0.01 ms/bit, 0 offset

Data Range: 0 to 642.55 ms

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65152

SPN 1466 Steer Channel Mode

Indicates the functional mode of steer channel of the tire pressure control system.

0000 Maintain

0001 Inflate

0010 Deflate

0011 Confirm

0100 Inflate Wait – System will inflate when conditions allow

0101 Deflate Wait – System will deflate when conditions allow

0110 Pressure Check

0111-1101 Reserved

1110 Error Condition

1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1467 Trailer/tag Channel Mode

Indicates the functional mode of trailer/tag channel of the tire pressure control system.

0000 Maintain
0001 Inflate
0010 Deflate
0011 Confirm
0100 Inflate Wait – System will inflate when conditions allow
0101 Deflate Wait – System will deflate when conditions allow
0110 Pressure Check
0111-1101 Reserved
1110 Error Condition
1111 Not available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65144

SPN 1468 Drive Channel Mode

Indicates the functional mode of trailer/tag channel of the tire pressure control system.

0000 Maintain
0001 Inflate
0010 Deflate
0011 Confirm
0100 Inflate Wait – System will inflate when conditions allow
0101 Deflate Wait – System will deflate when conditions allow

0111-1101 Reserved
1110 Error Condition
1111 Not available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65144

SPN 1469 PCU Drive Solenoid Status

Current state of the drive solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65144

SPN 1470 PCU Steer Solenoid Status

Current state of the steer solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1471 Tire Pressure Supply Switch Status

Current state of an open/closed type switch used to determine if adequate pressure exists for system implementation.

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1472 PCU Deflate Solenoid Status

Current state of the deflate solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1473 PCU Control Solenoid Status

Current state of the control solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1474 PCU Supply Solenoid Status

Current state of the supply solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1475 PCU Trailer, Tag or Push Solenoid Status

Current state of the trailer, tag, or push solenoid used to implement a tire pressure control system in its pneumatic control unit (PCU).

00 - Off
01 - On
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65144

SPN 1480 *Source Address of Controlling Device for Retarder Control*

The source address of the SAE J1939 device currently controlling the retarder. It is used to expand the torque mode parameter (see SPN 899) in cases where control is in response to an ECU that is not listed in Table SPN899_A. Its value may be the source address of the ECU transmitting the message (which means that no external SAE J1939 message is providing the active command) or the source address of the SAE J1939 ECU that is currently providing the active command in a TSC1 (see PGN 0) or similar message. Note that if this parameter value is the same as the source address of the device transmitting it, the control may be due to a message on a non-SAE J1939 data link such as SAE J1922 or a proprietary link.

Data Length: 1 byte
Resolution: 1 source address/bit, 0 offset
Data Range: 0 to 255 Operational Range: 0 to 253
Type: Status
Supporting information:
PGN reference: 61440

SPN 1481 *Source Address of Controlling Device for Brake Control*

The source address of the SAE J1939 device currently controlling the brake system. Its value may be the source address of the ECU transmitting the message (which means that no external SAE J1939 message is providing the active command) or the source address of the SAE J1939 ECU that is currently providing the active command in a TSC1 (see PGN 0) or similar message.

Note that if this parameter value is the same as the source address of the device transmitting it, the control may be due to a message on a non-SAE J1939 data link such as SAE J1922 or a proprietary link.

Data Length: 1 byte
Resolution: 1 source address/bit, 0 offset
Data Range: 0 to 255 Operational Range: 0 to 253
Type: Status
Supporting information:
PGN reference: 61441

SPN 1482 *Source Address of Controlling Device for Transmission Control*

The source address of the SAE J1939 device currently controlling the transmission. Its value may be the source address of the ECU transmitting the message (which means that no external SAE J1939 message is providing the active command) or the source address of the SAE J1939 ECU that is currently providing the active command in a TSC1 (see PGN 0) or similar message.

Note that if this parameter value is the same as the source address of the device transmitting it, the control may be due to a message on a non-SAE J1939 data link such as SAE J1922 or a proprietary link.

Data Length: 1 byte
Resolution: 1 source address/bit, 0 offset
Data Range: 0 to 255 Operational Range: 0 to 253
Type: Status
Supporting information:
PGN reference: 61442

SPN 1483 Source Address of Controlling Device for Engine Control

The source address of the SAE J1939 device currently controlling the engine. It is used to expand the torque mode parameter (see SPN 899) in cases where control is in response to an ECU that is not listed in Table SPN899_A. Its value may be the source address of the ECU transmitting the message (which means that no external SAE J1939 message is providing the active command) or the source address of the SAE J1939 ECU that is currently providing the active command in a TSC1 (see PGN 0) or similar message. Note that if this parameter value is the same as the source address of the device transmitting it, the control may be due to a message on a non-J1939 data link such as SAE J1922 or a proprietary link.

Data Length: 1 byte
Resolution: 1 source address/bit, 0 offset
Data Range: 0 to 255 Operational Range: 0 to 253
Type: Status
Supporting information:
PGN reference: 61444

SPN 1487 Illumination Brightness Percent

Commanded backlight brightness level for all cab displays

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 53248

SPN 1573 LED Display Data #1

Informs display devices how to display the current vertical position.

00000010 High Coarse LED on
00000100 High Fine LED on
00001000 On-grade LED on
00010000 Low Fine LED on
00100000 Low Coarse LED on
All other values Reserved

Data Length: 8 bits
Resolution: 256 states/8 bit, 0 offset
Data Range: 0 to 255 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65142

SPN 1574 Laser Strike Vertical Deviation

The calculated distance from the laser strike position to the current land leveling system reference point.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, -3,200 mm offset
Data Range: -3,200 to 3,225.5 mm Operational Range: -3200 to +3200 mm, negative values are below grade, positive values are above grade, zero is on grade, 0xFE03 indicates that the sensor can not sense the laser
Type: Measured

Supporting information:
PGN reference: 65141

SPN 1575 *Modify Leveling System Set Point*

Used to control and coordinate the set point for the leveling system.

Operating Range: -3200 to +3200 mm, negative values are below current position, positive values are above current position, zero is no change.

Parameter specific parameter:

0xFE01 indicates Stop modifying the set point

0xFE03 indicates Raise the current set point by 5 mm

0xFE11 indicates Lower the current set point by 5 mm

0xFE13 indicates Search for laser or target

0xFE15 indicates go to the Park position

0xFE17 indicates go to the Bench position

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65140

SPN 1576 *Mast Position*

Used to monitor the position of the sensor attached to the land leveling mast.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm

Operational Range: -3200 to +3200 mm, negative values are below current position, positive values are above current position, zero is no change.

Type: Measured

Supporting information:

PGN reference: 65139

SPN 1577 *Blade Duration and Direction*

Used to indicate the duration and direction that the land leveling system blade moves.

Data Length: 2 bytes

Resolution: 0.1 sec/bit, -3,276.8 sec offset

Data Range: -3276.8 to 3148.7 sec

Operational Range: -3276.8 to 3276.8 sec, negative values indicate move the blade up, positive values indicate move the blade down, zero indicates no change

Type: Status

Supporting information:

PGN reference: 65138

SPN 1578 *Blade Control Mode*

Allows the user to select the type of blade control for the land leveling system.

00000000 Manual mode
00000001 Automatic mode
00000010 Inactive automatic mode
All other values Reserved

Data Length: 8 bits
Resolution: 256 states/8 bit, 0 offset
Data Range: 0 to 255 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65138

SPN 1579 *Laser Tracer Target Deviation*

The calculated distance for the laser target to the current laser tracer reference point.

Parameter specific parameter: 0xFE03 indicates that the sensor can not sense the laser

Data Length: 2 bytes
Resolution: 0.1 mm/bit, -3,200 mm offset
Data Range: -3,200 to 3,225.5 mm Operational Range: -3200 to +3200 mm, negative values are below setpoint, positive values are above setpoint, zero is on grade.
Type: Measured
Supporting information:
PGN reference: 65137

SPN 1580 *Laser Tracer Vertical Distance*

The elevation of the laser tracer sensor in a laser leveling system.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, 0 offset
Data Range: 0 to 6,425.5 mm (0 to 6.4255 Operational Range: 0 to 6400 mm
Type: Measured
Supporting information:
PGN reference: 65137

SPN 1581 *Laser Tracer Horizontal Deviation*

The calculated percent deviation between the target distance and the center of the laser tracer.

Data Length: 1 byte
Resolution: 1 %/bit, 0 offset
Data Range: 0 to 250 % Operational Range: 0 to 200%, 0 to 99% indicates target is left of center, 101 to 200% indicates target is right of center, 100% indicates target is centered, 0xFF indicates previous pass mode and thus no horizontal deviation
Type: Measured

Supporting information:
PGN reference: 65137

SPN 1582 LED Display Data #2

Informs display devices how to display the current position of the laser tracer.

00000001 On-grade "A" LED on
00000010 On-grade "B" LED on
00000100 On-grade "C" LED on
00001000 Up LED on
00010000 Down LED on
00100000 Left LED on
01000000 Right LED on
All other values Reserved

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65137

SPN 1583 Laser Tracer Information

Provides the status of the laser tracer to the operator.

00000001 Laser power is on
00000010 Laser is ready
00000100 Valid target (1 = yes)
00001000 Previous pass (1 = yes)
00010000 Stringline (1 = yes)
00100000 Curb (1 = yes)
All other values Reserved

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65137

SPN 1584 Service Component Identification

Identification of component needing service. See Table SPN911_A.

Data Length: 1 byte

Resolution: 1 ID/bit, 0 offset

Data Range: 0 to 250 ID

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 56832

SPN 1585 *Powered Vehicle Weight*

Total mass imposed by the tires of the powered vehicle on the road surface. Does not include the trailer.

Data Length: 2 bytes

Resolution: 10 kg/bit, 0 offset

Data Range: 0 to 642,550 kg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65136

SPN 1586 *Speed of forward vehicle*

Absolute velocity of the preceding vehicle situated within 250 m in the same lane and moving in the same direction.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h Operational Range: 0xFF = no vehicle detected

Type: Measured

Supporting information:

PGN reference: 65135

SPN 1587 *Distance to forward vehicle*

Distance to the preceding vehicle situated within 250 m in the same lane and moving in the same direction.

Data Length: 1 byte

Resolution: 1 m/bit, 0 offset

Data Range: 0 to 250 m Operational Range: 0xFF = no vehicle detected

Type: Measured

Supporting information:

PGN reference: 65135

SPN 1588 *Adaptive Cruise Control Set Speed*

Value of the desired (chosen) velocity of the adaptive cruise control system.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h Operational Range: 0 to 120 km/h

Type: Status

Supporting information:

PGN reference: 65135

SPN 1589 Adaptive cruise control set distance mode

Selected distance mode for adaptive cruise control.

000 ACC Distance mode #1 (largest distance)
001 ACC Distance mode #2
010 ACC Distance mode #3
011 ACC Distance mode #4
100 ACC Distance mode #5 (shortest distance)
101 Conventional cruise control mode
110 Error condition
111 Not available/not valid

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1590 Adaptive Cruise Control Mode

This parameter is used to indicate the current state, or mode, of operation by the Adaptive Cruise Control (ACC) device. The states characterize independent system states (e.g., it is not possible to express distance control active and overtake mode simultaneously). ACC must not switch itself off while active because the driver expects it to work. So if an error occurs, the ACC must signal that to the driver so that the driver knows that he has to switch off the ACC.

000 Off (Standby, enabled, ready for activation)
001 Speed control active
010 Distance control active
011 Overtake mode
100 Hold mode
101 Finish mode
110 Disabled or error condition
111 Not available/not valid

000b - Off—Used to indicate the ACC is enabled in calibration or configuration and there are no faults that would prevent the system from operating.

001b - Speed Control Active—Used to indicate that ACC is on but not currently sending control messages. In other words, there is no target ahead and regular vehicle cruise control is controlling the vehicle speed to the driver's set speed.

010b - Distance Control Active—Used to indicate that ACC is on and actively sending control messages to maintain the appropriate following interval.

011b - Overtake Mode—Used to indicate that ACC is on but temporarily disabled because the driver is manually overriding cruise control by using either the accelerator pedal or the cruise control "accel" switch.

100b - Hold Mode—Used to indicate that the ACC has lost the previous target vehicle and is in HOLD mode. In this mode, the ACC shall limit the speed to the speed held when the target was lost. For example, if the driver activates the typical cruise buttons (Resume/Inc/Dec) the HOLD mode shall be exited and normal cruise functionality resumed. If a new target is detected, the Distance Control Active mode (010b) is again entered, unless existing conditions prohibit this.

101b - Finish Mode—Used to indicate that ACC is on with no target ahead, and ACC is currently sending control messages to return to the driver's set speed. This occurs when the target the ACC system was tracking moves out of the way so ACC returns the vehicle to the driver's set speed.

110b - Disabled or Error Condition—Used to indicate that ACC is in an error state and can not operate.

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1591 *Road curvature*

Estimated value of the current road curvature for use by the adaptive cruise control system. Positive values are used for left curves. Curvature is the inverse of the radius and is zero for straight roads.

Data Length: 2 bytes

Resolution: 1/128 1/km per bit, -250 1/km offset

Data Range: -250 to 251.992 1/km Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1592 *Front Axle, Left Wheel Speed*

High resolution measurement of the speed of the left wheel on the front axle.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65134

SPN 1593 *Front axle, right wheel speed*

High resolution measurement of the speed of the right wheel on the front axle.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65134

SPN 1594 *Rear axle, left wheel speed*

High resolution measurement of the speed of the left wheel on the rear axle.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65134

SPN 1595 *Rear axle, right wheel speed*

High resolution measurement of the speed of the right wheel on the rear axle.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65134

SPN 1601 *Local minute offset*

Local offset in minutes from a reference time.

Data Length: 1 byte

Resolution: 1 min/bit, -125 min offset

Data Range: -125 to 125 mins Operational Range: -59 to +59 min

Type: Measured

Supporting information:

PGN reference: 65254

SPN 1602 *Local hour offset*

Local offset in hours from a reference time

Data Length: 1 byte

Resolution: 1 hr/bit, -125 hr offset

Data Range: -125 to 125 hr Operational Range: -23 to +23 h

Type: Measured

Supporting information:

PGN reference: 65254

SPN 1603 *Adjust seconds*

Part of the parameter used to set the time.

Data Length: 1 byte

Resolution: 0.25 s/bit, 0 offset

Data Range: 0 to 62.5 s Operational Range: 0 to 59.75 s

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1604 *Adjust minutes*

Part of the parameter used to set the time.

Data Length: 1 byte

Resolution: 1 min/bit, 0 offset

Data Range: 0 to 250 mins

Operational Range: 0 to 59 min

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1605 *Adjust hours*

Part of the parameter used to set the time.

Data Length: 1 byte

Resolution: 1 hr/bit, 0 offset

Data Range: 0 to 250 hr

Operational Range: 0 to 23 h

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1606 *Adjust month*

Part of a parameter used to set a calendar date.

NOTE - A value of 0 for the month is null. The value 1 identifies January; 2 identifies February; etc.

Data Length: 1 byte

Resolution: 1 month/bit, 0 offset

Data Range: 0 to 250 months

Operational Range: 1 to 12 month

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1607 *Adjust day*

Part of a parameter used to set a calendar date.

NOTE - A value of 0 for the date is null. The values 1, 2, 3, and 4 are used to identify the first day of the month; 5, 6, 7, and 8 identify the second day of the month; etc.

Data Length: 1 byte

Resolution: 0.25 days/bit, 0 offset

Data Range: 0 to 62.5 days

Operational Range: 0.25 to 31.75 day

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1608 *Adjust year*

Part of a parameter used to set a calendar date.

NOTE - A value of 0 for the year identifies the year 1985; a value of 1 identifies 1986; etc.

Data Length: 1 byte

Resolution: 1 year/bit, 1985 years offset

Data Range: 1985 to 2235 years Operational Range: 1985 to 2235 year

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1609 *Adjust local minute offset*

Used to set the local offset in minutes from a reference time.

Data Length: 1 byte

Resolution: 1 min/bit, -125 min offset

Data Range: -125 to 125 mins Operational Range: -59 to +59 min

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1610 *Adjust local hour offset*

Used to set the local offset in hours from a reference time

Data Length: 1 byte

Resolution: 1 hr/bit, -125 hr offset

Data Range: -125 to 125 hr Operational Range: -24 to +23 h

Type: Measured

Supporting information:

PGN reference: 54528

SPN 1611 *Vehicle motion*

Indicates whether motion of the vehicle is detected or not.

00 Vehicle motion not detected

01 Vehicle motion detected

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1612 *Driver 1 working state*

State of work of the driver.

000 Rest - sleeping
001 Driver available – short break
010 Work – loading, unloading, working in an office
011 Drive – behind wheel
100-101 Reserved
110 Error
111 Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65132

SPN 1613 *Driver 2 working state*

State of work of the driver.

000 Rest - sleeping
001 Driver available – short break
010 Work – loading, unloading, working in an office
011 Drive – behind wheel
100-101 Reserved
110 Error
111 Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65132

SPN 1614 *Vehicle Overspeed*

Indicates whether the vehicle is exceeding the legal speed limit set in the tachograph.

00 No overspeed
01 Overspeed
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1615 *Driver card, driver 1*

Indicates the presence of a driver card

00 - Driver card not present
01 - Driver card present
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1616 *Driver card, driver 2*

Indicates the presence of a driver card

00 - Driver card not present
01 - Driver card present
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1617 *Driver 1 Time Related States*

Indicates if the driver approaches or exceeds working time limits (or other limits).

0000 Normal/No limits reached
0001 Limit #1 – 15 min before 4 ½ h
0010 Limit #2 – 4 ½ h reached
0011 Limit #3 – 15 min before 9 h
0100 Limit #4 – 9 h reached
0101 Limit #5 – 15 min before 16 h (not having 8h rest during the last 24h)
0110 Limit #6 – 16 h reached
0111-1100 Reserved
1101 Other
1110 Error
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1618 *Driver 2 Time Related States*

Indicates if the driver approaches or exceeds working time limits (or other limits).

0000 Normal/No limits reached
0001 Limit #1 – 15 min before 4 ½ h
0010 Limit #2 – 4 ½ h reached
0011 Limit #3 – 15 min before 9 h
0100 Limit #4 – 9 h reached
0101 Limit #5 – 15 min before 16 h (not having 8h rest during the last 24h)
0110 Limit #6 – 16 h reached
0111-1100 Reserved
1101 Other
1110 Error
1111 Not available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65132

SPN 1619 *Direction indicator*

Indicates the direction of the vehicle.

00 - Forward
01 - Reverse
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65132

SPN 1620 *Tachograph performance*

Indicates the tachograph performance; including electronic or mechanical analysis, instrument analysis, speed sensor analysis, mass storage analysis, and printer analysis.

00 - Normal performance
01 - Performance analysis
10 - Error
11 - Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65132

SPN 1621 *Handling information*

Indicates that handling information is present. Information could include "no printer paper", "no driver card", etc.

00 - No handling information
01 - Handling information
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65132

SPN 1622 *System event*

Indicates that a tachograph event has occurred. This may include power supply interruption, interruption of the speed sensor, incorrect data on the driver card, driving without a driver card, illegal removal of a driver card, insertion of a driver card during driving, and time adjustment.

00 - No tachograph event
01 - Tachograph event
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65132

SPN 1623 *Tachograph output shaft speed*

Calculated speed of the transmission output shaft.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1624 *Tachograph vehicle speed*

Speed of the vehicle registered by the tachograph.

Data Length: 2 bytes

Resolution: 1/256 km/h per bit, 0 offset

Data Range: 0 to 250.996 km/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65132

SPN 1625 *Driver 1 identification*

Used to obtain the driver identity.

Data Length: Variable ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65131

SPN 1626 *Driver 2 identification*

Used to obtain the driver identity.

Data Length: Variable ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65131

SPN 1632 *Engine Torque Limit Feature*

Torque limit rating described in the current record.

000 Reserved

001 Highest torque rating

010 First torque rating

011 Previous torque rating (rating prior to the current rating)

100 Current torque rating

101-110 Reserved

111 Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65168

SPN 1633 *Cruise Control Pause Switch*

Switch signal which indicates the position of the Cruise Control Pause Switch used on Remote Cruise Control applications. The Cruise Control Pause Switch signal temporarily disables the Cruise Control function.

00 - Off
01 - On
10 - Error Indicator
11 - Take No Action

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65265

SPN 1636 *Engine Intake Manifold 1 Air Temperature (High Resolution)*

Temperature of pre-combustion air found in intake manifold of engine air supply system. The higher resolution is required for control purposes.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65129

SPN 1637 *Engine Coolant Temperature (High Resolution)*

Temperature of liquid found in engine cooling system. The higher resolution is required for control purposes.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65129

SPN 1638 *Hydraulic Temperature*

Temperature of hydraulic fluid.

Data Length: 1 byte
Resolution: 1 deg C/bit, -40 deg C offset
Data Range: -40 to 210 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65128

SPN 1639 *Fan Speed*

The speed of the fan associated with engine coolant system.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65213

SPN 1653 (R) *Vehicle Limiting Speed Governor Enable Switch*

Switch signal which enables the Vehicle Limiting Speed Governor (VLSG) such that the vehicle speed may be either increased or decreased when the engine is off idle.

00 - Switch disabled

01 - Switched enabled

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1654 (R) *Vehicle Limiting Speed Governor Increment Switch*

Switch signal which increases the Vehicle Limiting Speed Governor (VLSG).

00 - Switch in the off state

01 - Switch in the on state - increase

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1655 *Vehicle Limiting Speed Governor Decrement Switch*

Switch signal which decreases the Vehicle Limiting Speed Governor (VLSG).

00 - Switch in the off state

01 - Switch in the on state - decrease

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1656 (R) *Engine Automatic Start Enable Switch*

Switch signal which enables the idle management system to be enabled. When this system is enabled with the engine in an idle mode and safe operating conditions existing, then the engine may be started or stopped automatically.

00 - Switch in the off state

01 - Switch in the on state

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1665 *Engine Turbocharger Oil Level Switch*

Switch signal which indicates the presence of oil at the turbocharger

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65245

SPN 1666 *Automatic Gear Shifting Enable Switch*

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1667 *Retarder Requesting Brake Light*

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 61440

SPN 1675 *Engine Starter Mode*

There are several phases in a starting action and different reasons why a start cannot take place.

0000 start not requested
0001 starter active, gear not engaged
0010 starter active, gear engaged
0011 start finished; starter not active after having been actively engaged (after 50ms mode goes to 0000)
0100 starter inhibited due to engine already running
0101 starter inhibited due to engine not ready for start (preheating)
0110 starter inhibited due to driveline engaged or other transmission inhibit
0111 starter inhibited due to active immobilizer
1000 starter inhibited due to starter over-temp
1001-1011 Reserved
1100 starter inhibited - reason unknown
1101 error (legacy implementation only, use 1110)
1110 error
1111 not available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 61444

SPN 1676 *Auxiliary Heater Water Pump Status*

Parameter indicating whether the auxiliary heater water pump is running

00 Water Pump is not running
01 Water Pump is running
10 Reserved
11 Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65133

SPN 1677 Auxiliary Heater Mode

State of the auxiliary heater

0000 Heater not active
0001 Off due to ADR per European Regulations for Transport of hazardous materials
0010 Economy mode
0011 Normal mode
0100-1101 Not defined
1110 Error
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65133

SPN 1678 Cab Ventilation

Indicates whether the cab is being ventilated or not.

00 Cab not ventilated
01 Cab is ventilated
10 Reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65133

SPN 1679 Engine Heating Zone

Parameter indicating whether the engine zone is being heated.

00 Engine heating zone off
01 Engine heating zone on
10 Reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65133

SPN 1680 Cab Heating Zone

Parameter indicating whether the cab zone is being heated.

00 Cab heating zone off
01 Cab heating zone on
10 Reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65133

SPN 1681 Battery Main Switch Hold State

Parameter indicating whether the battery main switch is held due to an external request or not. The state battery main switch held indicates that the battery main switch is about to switch off.

00 Battery main switch not held
01 Battery main switch held
10 Reserved
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65126

SPN 1682 Battery Main Switch Hold Request

Request to hold the battery main switch.

00 Release Battery Main Switch
01 Hold Battery Main Switch
10 undefined
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1683 Auxiliary Heater Mode Request

Request to activate the auxiliary heater.

0000 De-activate auxiliary heater
0001 Off due to ADR per European Regulations for Transport of hazardous materials
0010 Economy mode
0011 Normal mode
0100-1101 Not defined
1110 Reserved
1111 Don't care/take no action

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1684 Auxiliary Heater Coolant Pump Request

Indicates whether to activate the auxiliary heater coolant water pump.

00 Deactivate water pump
01 Activate water pump
10 Reserved
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1685 Request Engine Zone Heating

Request to activate engine zone heating.

00 Do not heat engine zone
01 Heat engine zone
10 Reserved
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1686 Request Cab Zone Heating

Request to activate cab zone heating.

00 Do not cab engine zone
01 Heat cab zone
10 Reserved
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1687 Auxiliary Heater Output Coolant Temperature

Temperature of the auxiliary heater output coolant (I.e. water in a water heater system.)

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65133

SPN 1688 Auxiliary Heater Input Air Temperature

Temperature of the input air in an auxiliary heater system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65133

SPN 1689 Auxiliary Heater Output Power Percent

Current auxiliary heater output power, relative to the auxiliary heater maximum output power.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65133

SPN 1690 *Auxiliary Heater Maximum Output Power*

The maximum output power of the auxiliary heater.

Data Length: 2 bytes

Resolution: 2 W/bit, 0 offset

Data Range: 0 to 128,510 W Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65127

SPN 1691 *Cab Interior Temperature Command*

Parameter used to command a certain cab interior temperature.

Note: See SPN 1662 and SPN 170.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 57344

SPN 1692 *Engine Desired Absolute Intake Manifold Pressure (Turbo Boost Limit)*

The desired absolute intake manifold pressure of the engine.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65194

SPN 1693 *Engine Turbocharger Wastegate Valve Position*

The position of the turbocharger wastegate valve (not the electronic wastegate control valve).

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65194

SPN 1694 Engine Gas Mass Flow Sensor Fueling Correction

The amount of fuel the Gas Mass Flow Sensor is sensing should be added or subtracted compared to the maximum amount of fuel the control system allows the sensor to add or subtract.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65194

SPN 1695 Engine Exhaust Gas Oxygen Sensor Fueling Correction

The amount of fueling change required by the system based on the measured Exhaust Oxygen value compared to the maximum fueling change permitted by the system, expressed as percentages.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65193

SPN 1696 Engine Exhaust Gas Oxygen Sensor Closed Loop Operation

Indicates whether the engine is using the Exhaust Gas Oxygen sensor to control the air/fuel ratio.

00 Command to disable function

01 Command to enable function

10 Reserved

11 Don't Care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65193

SPN 1697 CTI Wheel End Electrical Fault

Indicates the status of electrical fault on CTI wheel interface.

00 Ok (No Fault)

01 Not Defined

10 Error

11 Not Supported

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 1698 CTI Tire Status

Indicates the status of the tire.

00 Ok (no fault)
01 Tire leak detected
10 Error
11 Not Supported

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 1699 CTI Wheel Sensor Status

Indicates whether the wheel is being monitored by the CTI controller.

00 Off / isolated from CTI Pressure Controller
01 On (tire is polled)
10 Not Defined
11 Not Supported

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 1700 Lane Departure Imminent, Left Side

Indicates departure imminent on left side of lane.

00 Not imminent
01 Imminent
10 Reserved
11 Not used

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61447

SPN 1701 *Lane Departure Imminent, Right Side*

Indicates departure imminent on right side of lane.

00 Not imminent
01 Imminent
10 Reserved
11 Not Used

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61447

SPN 1702 *Lane Departure Indication Enable Status*

Indicates whether lane departure indication is active.

00 Lane Departure indication disabled
01 Lane Departure Indication enabled
10 Reserved
11 Not Used

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65115

SPN 1710 *Lane Tracking Status Left Side*

Indicates whether the left side is tracking lane.

00 Not Tracking Left side
01 Tracking Left side
10 Reserved
11 Don't care/Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65115

SPN 1711 *Lane Tracking Status Right Side*

Indicates whether right side is tracking lane.

00 Not Tracking Right side
01 Tracking Right side
10 Reserved
11 Don't Care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65115

SPN 1712 *Engine Extended Range Requested Speed Control Range Upper Limit (Engine configuration)*

The maximum engine speed regardless of load that the engine will allow when operating in a speed control/limit mode, excluding any maximum momentary engine override speed, if supported.

When the limit is higher than 2500 RPM the 'Requested Speed Control Range Upper Limit (Engine Configuration)' parameter (see SPN 536) will be transmitted with a value of 2500 RPM.

Data Length: 2 bytes

Resolution: 0.125 rpm/bit, 0 offset

Data Range: 0 to 8,031.875 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65251

SPN 1713 (R) *Hydraulic Oil Filter Restriction Switch*

This switch indicates whether hydraulic oil filter is clogged. This is not the transmission oil filter restriction switch, which is SPN 3359.

00 No restriction
01 Restriction exists on oil filter
10 Error
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65128

SPN 1714 *Operator Seat Direction Switch*

Senses whether the operator seat is in the forward driving position

00 Operator seat not facing forward

01 Operator seat is facing forward

10 Error

11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 57344

SPN 1715 *Drivers Demand Retarder - Percent Torque*

The Drivers demand retarder – percent torque is the maximum torque selected by the driver when one or more modes are selected by the driver, such as hand lever, switch, constant torque, constant velocity, etc.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: -125% to 0%

Type: Status

Supporting information:

PGN reference: 61440

SPN 1716 *Retarder Selection, non-engine*

The “Retarder Selection, non-engine” is the position of the driver’s selector for retarders that are not part of the engine system, expressed as percent and determined by the ratio of current position to the maximum possible position. The physical device may be a lever, rotary dial, combination of switches, or other device that the driver can use to select the type or amount of retardation needed.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61440

SPN 1717 *Actual Maximum Available Retarder - Percent Torque*

This is the maximum amount of torque that the retarder can immediately deliver. It is the same as the maximum torque shown in the Retarder’s Configuration message, but allows for a much faster rate of change than could be communicated by reissuing the configuration message.

Application Note: The purpose for this parameter is to allow a “Master” retarder controller to more accurately allocate the vehicle’s retarder requirements among multiple retarders. Its value should be the same as the value in the Configuration message at the time that message is assembled for broadcast, but may vary between those broadcasts.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: -125 % to 0

Type: Measured

Supporting information:

PGN reference: 61440

SPN 1718 *Damper Stiffness Request Front Axle*

Demand value for the shock absorber control at the front axle.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1719 *Damper Stiffness Request Rear Axle*

Demand value for the shock absorber control at the rear axle.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1720 *Damper Stiffness Request Lift / Tag Axle*

Demand value for the shock absorber control at the lift or tag axle

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1721 *Relative Level Front Axle Left*

Information of the height at the left side of the front axle referred to normal level 1. For explanations of normal level 1 see SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65113

SPN 1722 *Relative Level Front Axle Right*

Information of the height at the right side of the front axle referred to normal level 1. For explanations of normal level 1 see SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, -3,200 mm offset
Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65113

SPN 1723 *Relative Level Rear Axle Right*

Information of the height at the left side of the rear axle referred to normal level 1. For explanations of normal level 1 see parameter SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, -3,200 mm offset
Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65113

SPN 1724 *Relative Level Rear Axle Left*

Information of the height at the left side of the rear axle referred to normal level 1. For explanations of normal level 1 see parameter SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, -3,200 mm offset
Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65113

SPN 1725 *Bellow Pressure Front Axle Left*

Information of the pressure of the air suspension bellow at the left side of the front axle

Data Length: 2 bytes
Resolution: 0.1 kPa/bit, 0 offset
Data Range: 0 to 6,425.5 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65112

SPN 1726 Bellow Pressure Front Axle Right

Information of the pressure of the air suspension bellow at the right side of the front axle

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65112

SPN 1727 Bellow Pressure Rear Axle Left

Information of the pressure of the air suspension bellow at the left side of the rear axle

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65112

SPN 1728 Bellow Pressure Rear Axle Right

Information of the pressure of the air suspension bellow at the right side of the rear axle

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65112

SPN 1729 Damper Stiffness Front Axle

Damper stiffness information of the shock absorber control at the front axle

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65111

SPN 1730 *Damper Stiffness Rear Axle*

Damper stiffness information of the shock absorber control at the rear axle

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65111

SPN 1731 *Damper Stiffness Lift / Tag Axle*

Damper stiffness information of the shock absorber control at the lift of tag axle

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65111

SPN 1732 *Level Preset Front Axle Left*

Set value for nominal level 'preset level' at the left side of the front axle. This value is referred to 'Normal level 1'. For explanations of normal level 1 see parameter SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53504

SPN 1733 Nominal Level Rear Axle

Signal which indicates the nominal (desired) height of the rear axle to be controlled by the suspension system.

For further explanations see SPN 1734 - Nominal Level Front Axle.

0000 Level not specified,(i.e. the nominal level is none of the specified levels, no error condition)
0001 "Normal Level 1,(i.e. the level prescribed for normal driving, given by design)
0010 "Normal Level 2,(i.e. a level permitted for driving, for example to lower the vehicle in case of high speed)
0011 "Normal Level 3,(i.e. a level permitted for driving, for example to lift the vehicle in case of offroad)
0100 "Preset Level,(i.e. a level to be defined externally via CAN)
0101 "Customer Level,(i.e. a level to be defined by customer via parameter setting)
0110 "Upper Level,(i.e. the highest level to be controlled)
0111 "Lower Level,(i.e. the lowest level to be controlled)
1000-1101 Not defined
1110 Error
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65114

SPN 1734 Nominal Level Front Axle

Signal which indicates the nominal (desired) height of the front axle to be controlled by the suspension system.

These heights are discrete levels. They are the upper level, lower level, normal level 1, normal level 2, normal level 3, customer level, and preset level. Refer to Figure SPN1734_A.

- Upper Level is the highest mechanically available height of the vehicle.
- Lower Level is the lowest mechanically available height of the vehicle.

Normal Levels 1, 2 and 3 are heights normally used during driving.

- Normal Level 1 is most often used and is given by design.
- Normal Level 2 may be chosen, for example, to be lower than Normal Level 1 for the purpose of reducing fuel consumption while driving on highways.
- Normal Level 3 may be chosen above Normal Level 1 for driving off road.

The preset level has to be set by means of ASC 6 (PGN: 53504).

0000 Level not specified,(i.e. the nominal level is none of the specified levels, no error condition)
0001 "Normal Level 1,(i.e. the level prescribed for normal driving, given by design)
0010 "Normal Level 2,(i.e. a level permitted for driving, for example to lower the vehicle in case of high speed)
0011 "Normal Level 3,(i.e. a level permitted for driving, for example to lift the vehicle in case of offroad)
0100 "Preset Level,(i.e. a level to be defined externally via CAN)
0101 "Customer Level,(i.e. a level to be defined by customer via parameter setting)
0110 "Upper Level,(i.e. the highest level to be controlled)
0111 "Lower Level,(i.e. the lowest level to be controlled)
1000-1101 Not defined

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information: See Appendix D - SPN 1734

PGN reference: 65114

SPN 1735 *Level Preset Rear Axle Right*

Set value for nominal level 'preset level' at the right side of the rear axle. This value is referred to 'Normal level 1'. For explanations of normal level 1 see SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53504

SPN 1736 *Above Nominal Level Rear Axle*

Signal which indicates whether the actual height of the rear axle is above the nominal (desired) level of the rear axle. For explanations of nominal level see parameter SPN 1734 - Nominal Level Front Axle.

PGN reference: 65114

SPN 1741 (R) Level Control Mode

Signal which indicates the actual control mode of the air suspension system

0000 Normal operation; i.e. the system performs a ""pure"" control of the vehicle height
0001 Traction help (load transfer); i.e. the driven axle is loaded to a maximum value given by legislation or design
0010 Load fixing; i.e. the driven axlen is loaded to a value defined by the driver
0011 Pressure ratio 1; i.e. the ratio between the pressures at the driven axle and at the third axle is controlled, so that the ratio equals a fixed value 1
0100 Pressure ratio 2; i.e. the ratio between the pressures at the driven axle and at the third axle is controlled, so that the ratio equals a fixed value 2
0101 Optimum traction 1; i.e. the pressure at the driven axle is controlled at a fixed value 1
0110 Optimum traction 2; i.e. the pressure at the driven axle is controlled at a fixed value 2
0111 Traction help - load reduce; (i.e. the driven axle load is reduced to normal load condition)
1000 Exhausting bellow function; i.e. the bellows are exhausted totally
1001 Air suspension control prohibited (i.e. hold current pressures in all suspension devices.)
1010-1101 Not defined
1110 Error

PGN reference: 65114

SPN 1742 Kneeling Information

Signal which indicates the actual level change in case of kneeling function

0000 Not active,(i.e. the kneeling function is not active")
0001 Lowering active,(i.e. the vehicle is lowered due to a kneeling request)
0010 Kneeling level reached,(i.e. the vehicle is at the fixed kneeling level)
0011 Lifting active,(i.e. the vehicle is lifted due to a recover request)
0100 Kneeling aborted,(i.e. in case of manual actuation the request was dropped before the kneeling level was reached)
0101-1101 Not defined
1110 Error
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65114

SPN 1743 *Lift Axle 1 Position*

Signal which indicates the position / load condition of lift axle / tag axle #1. Numbering of lift/tag axles starts at front axle.

00 Lift axle position down / tag axle laden
01 Lift axle position up / tag axle unladen
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65114

SPN 1744 *Door Release*

Signal which indicates that the doors may be opened. [Please note: doors instead of door!]

In case a kneeling request is active the ASC indicates during lowering the vehicle „doors shall not be opened“ as a security information until the kneeling level is reached. Then "doors may be opened" is sent.

00 Doors may not be opened
01 Doors may be opened
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65114

SPN 1745 *Vehicle Motion Inhibit*

Signal which indicates whether vehicle motion is inhibited.

00 Vehicle may be moved
01 Vehicle motion is inhibited
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65114

SPN 1746 Security Device

The signal which indicates the status of the security device. An example of a security device is a curbstone feeler installed beneath the doors of a bus. If the security device becomes active during kneeling the kneeling process (lowering) is stopped and the vehicle lifts back to the starting level.

00 Not active

Supporting information:

PGN reference: 53760

SPN 1750 *Nominal Level Request Rear Axle*

Command signal to activate a level of the rear axle programmed and/or memorized in the ECU. For explanations of nominal level see SPN 1734 - Nominal Level Front Axle.

0000 No level request
0001 Normal Level 1,(i.e. the level prescribed for normal driving, given by design)
0010 Normal Level 2,(i.e. a level permitted for driving, for example to lower the vehicle in case of high speed)
0011 Normal Level 3,(i.e. a level permitted for driving, for example to lift the vehicle in case of offroad)
0100 Preset Level,(i.e. a level to be defined externally via CAN)
0101 Customer Level,(i.e. a level to be defined by customer via parameter setting)
0110 Upper Level,(i.e. the highest level to be controlled)
0111 Lower Level,(i.e. the lowest level to be controlled)
1000 Stop level change,(i.e. the level change in process shall be stopped immediately)
1001-1101 Not defined
1110 Reserved
1111 Don't care/take no action

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1751 *Nominal Level Request Front Axle*

Command signal to activate a level of the front axle programmed and/or memorized in the ECU For explanations of nominal level see SPN 1734 - Nominal Level Front Axle.

0000 No level request
0001 Normal Level 1,(i.e. the level prescribed for normal driving, given by design)
0010 Normal Level 2,(i.e. a level permitted for driving, for example to lower the vehicle in case of high speed)
0011 Normal Level 3,(i.e. a level permitted for driving, for example to lift the vehicle in case of offroad)

0110 Upper Level,(i.e. the highest level to be controlled)
0111 Lower Level,(i.e. the lowest level to be controlled)
1000 Stop level change,(i.e. the level change in process shall be stopped immediately)
1001-1101 Not defined
1110 Reserved
1111 Don't care/take no action

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1752 *Lift Axle 1 Position Command*

Signal to command the position/load condition of lift/tag axle #1. Numbering of lift/tag axles starts at front axle.

00 Lift axle position down / tag axle laden
01 Lift axle position up / tag axle unladen
10 Reserved
11 Don't care/take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53760

SPN 1753 Level Control Mode Request

Command signal to activate a level control mode

0000 Normal operation; i.e. the system performs a ""pure"" control of the vehicle height
0001 Traction help (load transfer); i.e. the driven axle is loaded to a maximum value given by legislation or design
0010 Load fixing; i.e. the driven axle is loaded to a value defined by the driver
0011 Pressure ratio 1; i.e. the ratio between the pressures at the driven axle and at the third axle is controlled, so that the ratio equals a fixed value 1
0100 Pressure ratio 2; i.e. the ratio between the pressures at the driven axle and at the third axle is controlled, so that the ratio equals a fixed value 2
0101 Optimum traction 1; i.e. the pressure at the driven axle is controlled at a fixed value 1
0110 Optimum traction 2; i.e. the pressure at the driven axle is controlled at a fixed value 2
0111 Traction help - load reduce; (i.e. reduce axle load of driven axle to normal load condition)
1000 Exhaust bellows
1001 -1101 Not defined
1110 Reserved
1111 Don't care/take no action

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

PGN reference: 65114

SPN 1757 *Level Preset Front Axle Right*

Set value for nominal level 'preset level' at the right side of the front axle. This value is referred to 'Normal level 1'. For explanations of normal level 1 see SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53504

SPN 1758 *Level Preset Rear Axle Left*

Set value for nominal level 'preset level' at the left side of the rear axle. This value is referred to 'Normal level 1'. For explanations of normal level 1 see SPN 1734 - Nominal Level Front Axle.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 53504

SPN 1759 *Blade Height Set Point - High Resolution*

High resolution for the laser guided blade set point. The high resolution required for more accurate control and 'accurate' unit conversions.

Negative values are below grade, positive values are above grade, zero is on grade.

Data Length: 4 bytes

Resolution: 100 mm/bit, -209.7152 m offset

Data Range: -209.7152 to 211.3929215 m

Operational Range: -209.7152m to 209.7152m

Type: Measured

Supporting information:

PGN reference: 65140

SPN 1760 Gross Combination Vehicle Weight

The total weight of the truck and all attached trailers.

Data Length: 2 bytes

Resolution: 10 kg/bit, 0 offset

Data Range: 0 to 642,550 kg

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65136

SPN 1761 Catalyst Tank Level

A special catalyst uses chemical substance to reach legal requirement for NOX emissions. This parameter indicates the level within that catalyst tank.

0 % = Empty

100% = Full

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65110

SPN 1762 Hydraulic Pressure

Hydraulic pressure measured at the output of the hydraulic pump.

Data Length: 2 bytes

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 128,510 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61448

SPN 1763 Engine Hydraulic Pressure Governor Mode Indicator

Mode for governor operation is hydraulic pressure control.

SPN 1765 Engine Requested Fuel Valve 1 Position

The requested position of a gaseous fuel valve 1 that is metering the fuel flow to the engine.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65153

SPN 1766 Engine Requested Fuel Valve 2 Position

The requested position of a gaseous fuel valve 2 that is metering the fuel flow to the engine, as requested by the Engine Control Unit.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65153

SPN 1767 Specific Heat Ratio

The specific heat ratio of the fuel.

Data Length: 2 bytes

Resolution: 0.001/bit, 0 offset

Data Range: 0 to 64.255

Operational Range: 0 to 2.0000

Type: Status

Supporting information:

PGN reference: 65109

SPN 1768 *Engine Low Limit Threshold for Maximum RPM from Engine*

Minimum allowable value for maximum continuous RPM from engine

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1769 *Engine High Limit Threshold for Minimum Continuous Engine RPM*

Maximum allowable value for minimum continuous RPM from engine

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1770 *Engine Low Limit Threshold for Maximum Torque from Engine*

Minimum allowable value for maximum continuous torque from engine

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1771 *Engine High Limit Threshold for Minimum Continuous Torque from Engine*

Maximum allowable value for minimum continuous torque from engine

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1772 Engine Maximum Continuous RPM

Applied limit for maximum continuous engine RPM

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1773 Engine Minimum Continuous RPM

Applied limit for minimum continuous engine RPM

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1774 Engine Maximum Continuous Torque

Applied limit for maximum continuous engine torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1775 Engine Minimum Continuous Torque

Applied limit for minimum continuous engine torque

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65108

SPN 1776 *Low Limit Threshold for Maximum RPM from Retarder*

Minimum allowable value for maximum continuous retarder speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1777 *High Limit Threshold for Minimum Continuous RPM from Retarder*

Maximum allowable value for minimum continuous retarder speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1778 *Low Limit Threshold for Maximum Torque from Retarder*

Minimum allowable value for maximum continuous retarder torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1779 *High Limit Threshold for Minimum Continuous Torque from Retarder*

Maximum allowable value for minimum continuous retarder torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1780 *Maximum Continuous Retarder Speed*

Applied limit for maximum continuous retarder RPM

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1781 *Minimum Continuous Retarder Speed*

Applied limit for minimum continuous retarder RPM

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1782 *Maximum Continuous Retarder Torque*

Applied limit for maximum continuous retarder torque.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1783 *Minimum Continuous Retarder Torque*

Applied limit for minimum continuous retarder torque

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65107

SPN 1784 Engine Speed Limit Request - Minimum Continuous

Requested minimum continuous engine speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 52992

SPN 1785 Engine Speed Limit Request - Maximum Continuous

Requested maximum continuous engine speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 52992

SPN 1786 Engine Torque Limit Request - Minimum Continuous

Requested minimum continuous engine torque (operating range: 0 to 125%)

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: 0 to 125%

Type: Status

Supporting information:

PGN reference: 52992

SPN 1787 Engine Torque Limit Request - Maximum Continuous

Requested maximum continuous engine torque (operating range: 0 to 125%)

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: 0 to 125%

Type: Status

Supporting information:

PGN reference: 52992

SPN 1788 *Minimum Continuous Retarder Speed Limit Request*

Requested minimum continuous retarder speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 52992

SPN 1789 *Maximum Continuous Retarder Speed Limit Request*

Requested maximum continuous retarder speed

Data Length: 1 byte

Resolution: 32 rpm/bit, 0 offset

Data Range: 0 to 8,000 rpm Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 52992

SPN 1790 *Minimum Continuous Retarder Torque Limit Request*

Requested minimum continuous retarder torque (operating range: -125 to 0%)

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: -125 to 0%

Type: Status

Supporting information:

PGN reference: 52992

SPN 1791 *Maximum Continuous Retarder Torque Limit Request*

Requested maximum continuous retarder torque (operating range: -125 to 0%)

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 % Operational Range: -125 to 0%

Type: Status

Supporting information:

PGN reference: 52992

SPN 1792 *Tractor-Mounted Trailer ABS Warning Signal*

This parameter commands the tractor-mounted trailer ABS optical warning signal.

00 Off

01 On

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 1793 *ATC/ASR Information Signal*

This parameter commands the ATC/ASR driver information signal, for example a dash lamp.

00 Off

01 On

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61441

SPN 1794 *Engine Moment of Inertia*

Moment of inertia for the engine, including items driven full-time by the engine such as fuel, oil and cooling pumps. The inertia from the following items are not included: flywheel, alternator, compressor, fan, and other engine-driven accessories.

Data Length: 2 bytes

Resolution: 0.004 kg-m²/bit, 0 offset

Data Range: 0 to 257.02 kg-m²

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65251

SPN 1795 *Alternator Current (High Range/Resolution)*

This parameter indicates the amount of electrical current output from the alternator of the main vehicle. Alternator Current (SPN 115) has a lower range and resolution.

Data Length: 2 bytes

Resolution: 0.05 A/bit, -1600 A offset

Data Range: -1600 to 1612.75 A

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65106

SPN 1796 ACC Distance Alert Signal

Signal to indicate to the operator that the ACC system is not able to maintain the distance to the target. Example: Target stopping rapidly. This signal may be used to activate warning sounds or indicators.

00 ACC DAS Not Active
01 ACC DAS Active
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1797 ACC System Shutoff Warning

Signal to warn the driver of system deactivation due to non-driver actions. Example: Attempting to control vehicle speed below or above limits of ACC. This signal may be used to activate warning sounds or indicators.

00 ACC SSOW Not Active
01 ACC SSOW Active
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1798 ACC Target Detected

Signal to indicate to the driver that the ACC system has detected a target.

00 No targets detected
01 Target detected
10 Reserved
11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65135

SPN 1799 Requested ACC Distance Mode

The Requested Distance Control Mode to the ACC system from the operators interface.

The ACC Set Distance Mode (SPN 1589) indicates the selected Distance Control Mode for the ACC system. This parameter is the driver requested setting for this.

000 Requested ACC Distance Mode #1 (largest distance)
001 Requested ACC Distance Mode #2
010 Requested ACC Distance Mode #3
011 Requested ACC Distance Mode #4
100 Requested ACC Distance Mode #5 (shortest distance)
101 not defined
110 error condition
111 not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65105

SPN 1800 Battery 1 Temperature

Temperature of the battery 1. The relation to physical location is determined by the equipment manufacturer.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65104

SPN 1801 Battery 2 Temperature

Temperature of the battery 2. The relation to physical location is determined by the equipment manufacturer.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65104

SPN 1802 Engine Intake Manifold 5 Temperature

Temperature of pre-combustion air found in intake manifold number 5 of engine air supply system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65189

SPN 1803 *Engine Intake Manifold 6 Temperature*

Temperature of pre-combustion air found in intake manifold number 6 of engine air supply system.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65189

SPN 1804 *Engine Start Enable Device 2*

Devices that assist an engine in starting, e.g. intake heaters, ether, or an alternate/secondary starting aid. May be of the same type or different than Start Enable Device 1 (SPN 626). Parameter indicating whether the start enable device 2 is ON or OFF.

00 - start enable OFF

01 - start enable ON

10 - reserved

11 - not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64966

SPN 1805 *LED Display Mode Control*

This parameter informs the system what the selected Display mode will be.

0000 - Center On-Grade Display Mode 1 (5 CHANNEL)

0001 - Offset On-Grade Display Mode

0010 - Center On-Grade Display Mode 2 (7 CHANNEL)

0011 - 1110 Reserved

1111 - Not Available or Not Applicable

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65142

SPN 1806 LED Display Deadband Control

This parameter informs the system what the selected Display deadband will be.

0000 +/- 4.5 mm (0.015 feet, 0.18 inches)
0001 +/- 12 mm (0.040 feet, 0.45 inches)
0010 +/- 24 mm (0.080 feet, 0.96 inches)
0011 +/- 5 mm (0.017 feet, 0.2 inches)
0100 +/- 1 mm (0.003 feet, 0.04 inches)
0101 - 1110 Reserved
1111 Not Available or Not applicable

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65142

SPN 1807 Steering Wheel Angle

The main operator's steering wheel angle (on the steering column, not the actual wheel angle). The vehicle being steered to the left results in a positive steering wheel angle.

Data Length: 2 bytes

Resolution: 1/1024 rad per bit, -31.374 rad offset

Data Range: -31.374 to +31.374 rad

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61449

SPN 1808 Yaw Rate

Indicates the rotation about the vertical axis. A positive yaw rate signal results when the vehicle turns counter-clockwise.

Data Length: 2 bytes

Resolution: 1/8192 rad/s per bit, -3.92 rad/s offset

Data Range: -3.92 to +3.92 rad/s

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61449

SPN 1809 Lateral Acceleration

Indicates a lateral acceleration of the vehicle. A positive lateral acceleration signal results when the vehicle is accelerated to the left.

Data Length: 2 bytes

Resolution: 1/2048 m/s² per bit, -15.687 m/s² offset

Data Range: -15.687 to +15.687 m/s²

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61449

SPN 1810 Longitudinal Acceleration

Indicates the longitudinal acceleration of the vehicle. A positive longitudinal acceleration signal results when the vehicle speed increases, regardless of driving the vehicle forward or backward.

Data Length: 1 byte

Resolution: 0.1 m/s² per bit, -12.5 m/s² offset

Data Range: -12.5 to +12.5 m/s² Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61449

SPN 1811 Steering Wheel Turn Counter

Indicates number of steering wheel turns, absolute position or relative position at ignition on. Positive values indicate left turns.

Data Length: 6 bits

Resolution: 1 turn/bit, -32 turns offset

Data Range: -32 to 29 turns Operational Range: -10 to +10 Turns

Type: Measured

Supporting information:

PGN reference: 61449

SPN 1812 Steering Wheel Angle Sensor Type

Indicates whether the steering wheel angle sensor is capable of absolute measuring of the number of steering wheel turns or not (relative measuring to position at ignition on).

00 Relative measuring principle

SPN 1835 *Engine Total Average Fuel Economy*

Average fuel economy, equal to total vehicle distance divided by total fuel used, over the life of the engine

Data Length: 2 bytes

Resolution: 1/512 km/L per bit, 0 offset

Data Range: 0 to 125.5 km/L

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65101

SPN 1836 Trailer ABS Status

State signal which indicates that ABS in the trailer is actively controlling the brakes. A message is sent to the tractor from the trailer (i.e. by PLC). The receiving device in the tractor transfers this information to the J1939 network. At the beginning of power on the message is sent by the trailer to indicate if this status information is supported. Timeout of the trailer ABS active can be done by monitoring of the Trailer warning light information.

SPN 1844 *Operators Black Out Intensity Selection*

Operators Selection of lamp intensity in black out mode. This parameter provides the operators selected illumination intensity as a percentage of available full scale. This parameter would be typically used as a dash or instrument cluster intensity adjustment.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65100

SPN 1845 *Transmission Torque Limit*

Parameter provided to the engine from the transmission as a torque limit to be invoked by the engine in the event that J1939 communication with the transmission is lost.

The intention is to protect transmissions that use a continuous torque limit during torque converter mode or operation in specific lower gears, where stall or drivetrain torque may reach levels higher than the gearbox capacity. If communication is lost during torque limited operation, unrestricted engine torque output could harm the transmission.

It is recommended that engines use reception of the ETC#1 message as a transmission "heartbeat". In the event that the ETC#1 message is not received in a time period of 5 times its' broadcast rate ($5 \times 10 \text{ ms} = 50 \text{ ms}$), the engine should invoke a torque limit holding the engine to less than or equal to the value of the Transmission Torque Limit parameter. The engine may release the limit when transmission-to-engine communication is re-established.

A value of 0xFF00 to 0xFFFF indicates that no transmission torque limit is desired.

It is expected that the engine will record this torque value in non-volatile memory and will include this in the engine configuration PGN as parameter Engine Default Torque Limit (SPN 1846)

If the engine observes change in this parameter value on power-up, the engine should record the new value.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65099

SPN 1846 *Engine Default Torque Limit*

Companion parameter to Transmission Torque Limit (SPN 1845). This "echo" parameter provides confirmation to the transmission that the engine has received and will invoke the requested Transmission Torque Limit in the event that J1939 communication is lost between the two devices.

If the engine supports this protection logic, the Engine Default Torque Limit parameter should be set equal to the Transmission Torque Limit parameter as received in the Transmission Configuration message (PGN 65250). Otherwise, an Engine Default Torque Limit value of FF00 to FFFF indicates that no engine default torque limit has been received or set.

The intention is to protect transmissions that use a continuous torque limit during torque converter mode or operation in specific lower gears, where stall or drivetrain torque may reach levels higher than the gearbox capacity. If communication is lost during torque limited operation, unrestricted engine torque output could harm the transmission.

It is recommended that engines use reception of the ETC#1 message as a transmission "heartbeat". In the event that the ETC#1 message is not received in a time period of 5 times its' broadcast rate ($5 \times 10 \text{ ms} = 50 \text{ ms}$), the engine should invoke a torque limit holding the engine to less than or equal to the value of the Transmission Torque Limit parameter. The engine may release the limit when engine-to-transmission communication is re-established.

Data Length: 2 bytes
Resolution: 1 Nm/bit, 0 offset
Data Range: 0 to 64,255 Nm Operational Range: same as data range

SPN 1849 *Transmission Requested Range Display Flash State*

State signal indicating a transmission request for the display of the Transmission Requested Range parameter (SPN 162) to flash or not to flash. The 'Transmission Requested Range Display Flash State' indicator can be utilized by (but not limited to) the shift console, instrument cluster, or cab display. Definition of the cause of this state is at the discretion of the transmission manufacturer. The flash period shall be 700 ms @ 50% duty cycle.

Transmission manufacturers may want to flash the Transmission Requested Range display depending on certain events. It could be because a gear could not be attained, or because fluid is low, etc. Indicator should be on for 350 ms and off for 350 ms.

Transmissions supporting both this parameter and the Transmission Requested Range Display Blank State should treat the active states of these parameters as mutually exclusive; both parameters should not indicate "active" at the same time.

00 Inactive; Transmission Requested Range display should not be flashing

01 Active; Transmission Requested Range display should be flashing

10 Reserved

11 Take no action

Data Length: 2 bits

Supporting information:

PGN reference: 65098

SPN 1850 *Transmission Requested Range Display Blank State*

State signal indicating a transmission request for the display of the Transmission Requested Range parameter (SPN162) to be blanked or not blanked. The 'Transmission Requested Range Display Blank State' indicator can be utilized by (but not limited to) the shift console, instrument cluster, or cab display. Definition of the cause of this state is at the discretion of the transmission manufacturer

Transmission manufacturers may want to blank the Transmission Requested Range display depending on certain events. Typically it is an indication of a shift selector problem.

Transmissions supporting both this parameter and the Transmission Requested Range Display Flash

State should treat the active states of these parameters as mutually exclusive; both parameters should not indicate "active" at the same time.

00 Inactive; Transmission Requested Range display should not be blanked

01 Active; Transmission Requested Range display should be blanked

SPN 1851 *Transmission Shift Inhibit Indicator*

State signal indicating a transmission request for the Shift Inhibit Indicator to be active or inactive. The shift inhibit indicator can be of lamp or text form, located on (but not limited to) the shift console, instrument cluster, or cab display. Definition of the cause of the 'range inhibit' state is at the discretion of the transmission manufacturer.

Transmission manufacturers may want to indicate that they currently cannot make a requested shift. This could be due to inappropriate vehicle speed or other restrictions.

00 Inactive; shift is not inhibited
01 Active; shift is inhibited

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2397 *Implement OEM Option 2 Light Command*

Command to activate or de-activate an implement OEM option 2 light. This is provided to meet special needs on implements, such as tank inspection or filling lights.

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2398 *Implement OEM Option 2 Light*

This parameter provides measured data from the implement OEM option 2 light.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2399 *Implement Left Forward Work Light Command*

Command to activate or de-activate the forward facing work lights toward the left end of the implement.

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2400 *Implement Left Forward Work Light*

This parameter provides measured data from the forward facing work lights toward the left end of the implement.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2401 *Implement Right Forward Work Light Command*

Command to activate or de-activate the forward facing work lights toward the right end of the implement.

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2402 *Implement Right Forward Work Light*

This parameter provides measured data from the forward facing work lights toward the right end of the implement.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2403 *Running Light Command*

Command to activate or de-activate the tractor or powered vehicle running lights. Usually only used for on road vehicles.

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2404 *Running Light*

This parameter provides measured data from the vehicle's running lights.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2405 *Implement Rear Work Light Command*

Command to activate or de-activate implement rear work lights. (This is also the same as Reversing Lights for truck applications.)

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2406 *Implement Right Facing Work Light Command*

Command to activate or de-activate work lights mounted on an implement to illuminate beyond right end of the implement.

00 De-activate
01 Activate
10 Reserved
11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2407 *Implement Right Facing Work Light*

This parameter provides measured data from the work lights mounted on an implement to illuminate beyond right end of the implement.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2432 *Engine Demand – Percent Torque*

The requested torque output of the engine by all dynamic internal inputs, including smoke control, noise control and low and high speed governing.

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: -125% to +125%

Type: Measured

Supporting information: See Appendix D - SPN 2432

PGN reference: 61444

SPN 2433 *Engine Exhaust Gas Temperature - Right Manifold*

Temperature of combustion byproducts within the right engine exhaust manifold. Single manifold engines should use exhaust temperature (SPN 173).

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65031

SPN 2434 Engine Exhaust Gas Temperature - Left Manifold

Temperature of combustion byproducts within the left engine exhaust manifold. Single manifold engines should use exhaust temperature (SPN 173).

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65031

SPN 2435 Sea Water Pump Outlet Pressure

Gauge pressure of liquid found at outlet of sea water pump in sea water cooling system.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65172

SPN 2536 Transmission Mode 1 Indicator

This state signal is the transmission's indication that it is operating under transmission mode 1 (SPN 1852) as commanded via the TC1 message (PGN 256). The definition of the transmission mode is left to the discretion of the transmission manufacturer.

00 Transmission Mode 1 not active

01 Transmission Mode 1 Active

10 Error

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65098

SPN 2537 Transmission Mode 2 Indicator

This state signal is the transmission's indication that it is operating under transmission mode 2 (SPN 1853) as commanded via the TC1 message (PGN 256). The definition of the transmission mode is left to the discretion of the transmission manufacturer.

00 Transmission Mode 2 not active

01 Transmission Mode 2 Active

10 Error

PGN reference: 65098

SPN 2539 *Transmission Mode 4 Indicator*

This state signal is the transmission's indication that it is operating under transmission mode 4 (SPN 1855) as commanded via the TC1 message (PGN 256). The definition of the transmission mode is left to the discretion of the transmission manufacturer.

00 Transmission Mode 4 not active
01 Transmission Mode 4 Active
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65098

SPN 2576 *Laser Receiver Type*

Identifies which type of Laser Receiver transmitted the message.

0 = Reserved
1 = Linear Laser Receiver
2 = 1 Meter Survey Receiver
3 = 2 Meter Survey Receiver
4 = 2.5 Meter Survey Receiver
5-250 = Reserved

Data Length: 1 byte

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 250

Operational Range: 1-4

Type: Status

Supporting information:

PGN reference: 65141

SPN 2577 *Display Deadbands*

Sets Display Deadbands mode.

0000 - Narrow = +/- 4.5mm
0001 - Standard = +/- 12mm
0010 - Wide = +/- 24mm
0011 - 1110 Reserved
1111 Not Available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65142

SPN 2578 *LED Pattern Control*

Sets LED Pattern control mode on laser leveling systems.

0000 - 5 Channel
0001 - Offset
0010 - 7 Channel
0011 - 1110 Reserved
1111 Not Available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 65142

SPN 2579 *Net Battery Current (High Range/Resolution)*

Net flow of electrical current into/out-of the battery or batteries. This parameter is the high range and resolution of SPN 114 - Net Battery Current.

Data Length: 2 bytes
Resolution: 0.05 A/bit, -1600 A offset
Data Range: -1600 to 1612.75 A Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65106

SPN 2580 *Hydraulic Brake Pressure Circuit 1*

Gage hydraulic pressure in circuit 1 of the hydraulic brake system

Data Length: 1 byte
Resolution: 100 kPa/bit, 0 offset
Data Range: 0 to 25 MPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64998

SPN 2581 *Hydraulic Brake Pressure Circuit 2*

Gage hydraulic pressure in circuit 2 of the hydraulic brake system

Data Length: 1 byte

Resolution: 100 kPa/bit, 0 offset

Data Range: 0 to 25 MPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2582 *Hydraulic Brake Pressure Supply State Circuit 1*

Signal which indicates whether the hydraulic brake pressure supply of circuit 1 is reliable; that is, able to support continued braking.

00 Supply is not reliable

01 Supply is reliable

10 Error indicator

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2583 *Hydraulic Brake Pressure Supply State Circuit 2*

Signal which indicates whether the hydraulic brake pressure supply of circuit 2 is reliable; that is, able to support continued braking.

00 Supply is not reliable

01 Supply is reliable

10 Error indicator

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2584 *Hydraulic Brake Pressure Warning State Circuit 1*

Signal which indicates whether the hydraulic brake pressure of circuit 1 is below the warning level

00 Pressure level sufficient

01 Pressure level below warning level

10 Error indicator

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2585 *Hydraulic Brake Pressure Warning State Circuit 2*

Signal which indicates whether the hydraulic brake pressure of circuit 2 is below the warning level

00 Pressure level sufficient

01 Pressure level below warning level

10 Error indicator

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2586 *Tire Air Leakage Rate*

The pressure loss rate of a tire.

Data Length: 2 bytes

Resolution: 0.1 Pa/s per bit, 0 offset

Data Range: 0 Pa/s to 6425.5 Pa/s

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 2587 *Tire Pressure Threshold Detection*

Signal indicating the pressure level of the tire. The levels defined represent different pressure conditions of the tire:

000 Extreme over pressure - The tire pressure is at a level where the safety of the vehicle may be jeopardised.
001 Over pressure - The tire pressure is higher than the pressure defined by the vehicle or tire manufacturer.
010 No warning pressure - The tire pressure is within the thresholds defined by the vehicle or tire manufacturer.
011 Under pressure - The tire pressure is lower than the pressure defined by the vehicle or tire manufacturer.
100 Extreme under pressure - The tire pressure is at a level where the safety of the vehicle may be jeopardised.
101 Not defined
110 Error indicator
111 Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65268

SPN 2588 *Maximum Vehicle Speed Limit 1*

The lowest Maximum Vehicle Speed Limit. This value is the similar to SPN 74. However, SPN 74 was not specifically defined to convey the applied vehicle speed limit or what was possible to be applied. This new SPN is the lowest vehicle speed limit that is possible. Additionally, the lowest vehicle speed limit shall be applied when the J1939 network is no longer providing input regarding the Selected Maximum Vehicle Speed Limit. Exceptions to this exist when the device performing the maximum vehicle speed limiting function has methods of selecting the thresholds separately from the Selected Maximum Vehicle Speed Limit parameter.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2589 *Maximum Vehicle Speed Limit 2*

The highest of the two lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2590 *Maximum Vehicle Speed Limit 3*

The highest of the three lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2591 *Maximum Vehicle Speed Limit 4*

The highest of the four lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2592 *Maximum Vehicle Speed Limit 5*

The highest of the five lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2593 *Maximum Vehicle Speed Limit 6*

The highest of the six lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2594 *Maximum Vehicle Speed Limit 7*

The highest of the seven lowest vehicle speed limits

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2595 *Applied Vehicle Speed Limit*

The vehicle speed limit in effect.

Data Length: 1 byte

Resolution: 1 km/h per bit, 0 offset

Data Range: 0 to 250 km/h

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64997

SPN 2596 *Selected Maximum Vehicle Speed Limit*

User selected maximum vehicle speed, must equal one of the maximum vehicle speeds #1-#7 from PGN 64997 - maximum vehicle speed limit status . If different maximum vehicle speed requests are present from different devices, the lowest requested value should be used.

Data Length: 1 byte

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 250

Operational Range: 1 through 7 are allowed. 8 through 250 are not allowed.

Type: Status

Supporting information:

PGN reference: 57344

SPN 2597 *Implement Left Facing Work Light Command*

Command to activate or de-activate work lights mounted on an implement to illuminate beyond left end of the implement.

00 De-activate

01 Activate

10 Reserved

11 Don't Care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65089

SPN 2598 *Implement Left Facing Work Light*

This parameter provides measured data from the work lights mounted on an implement to illuminate beyond left end of the implement.

00 De-activate
01 Activate
10 Fault Detected
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65088

SPN 2599 *Fire Apparatus Pump Engagement*

The measured status of the pump used to provide water in fire fighting apparatus for distribution of water through water cannons or fire hoses.

00 Pump not engaged
01 Pump engaged
10 Error
11 Not available or not installed

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61448

SPN 2600 *Payload Percentage*

The current payload of the equipment, reported as a percentage of the equipment's rated payload limit.

Data Length: 1 byte

Resolution: 1 %/bit, 0 offset

Data Range: 0 to 250 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64996

SPN 2601 *Travel Velocity Control Position*

The position of the travel velocity control component reported as a percentage of the control's full displacement in each direction respectively. Positive position values indicate forward travel direction; negative position values indicate reverse, or backward, travel direction; and zero (0) percent position indicates the control device is in the neutral position. Higher percent for a particular travel direction indicates a higher desired travel speed in that direction.

Data Length: 1 byte
Resolution: 1 %/bit, -125 % offset
Data Range: -125 to 125 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64995

SPN 2602 *Hydraulic Oil Level*

This parameter indicates the level of the hydraulic fluid in tank as a ratio of current volume to total tank volume. This parameter is intended for reporting the hydraulic fluid level in the system tank or reservoir. This hydraulic fluid is for the entire hydraulics system of a piece of equipment.

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65128

SPN 2603 *Pneumatic Supply Pressure Request*

Command signal to influence the pneumatic pressure in the main reservoir. This parameter is the setpoint for the parameter SPN 46.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2604 *Parking and/or Trailer Air Pressure Request*

Command signal to influence the pneumatic pressure in the circuit or reservoir for the parking brake and/or the trailer supply. This parameter is the setpoint for the parameter SPN 1086.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2605 *Service Brake Air Pressure Request, Circuit #1*

Command signal to influence the pneumatic pressure in the service brake circuit or reservoir #1. This parameter is the setpoint for the parameter SPN 1087.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2606 *Service Brake Air Pressure Request, Circuit #2*

Command signal to influence the pneumatic pressure in the service brake circuit or reservoir #2. This parameter is the setpoint for the parameter SPN 1088.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2607 *Auxiliary Equipment Supply Pressure Request*

Command signal to influence the pneumatic pressure in the auxiliary circuit. This parameter is the setpoint for the parameter SPN 1089.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2608 *Air Suspension Supply Pressure Request*

Command signal to influence the pneumatic pressure in the circuit for the electronically controlled air suspension system. This parameter is the setpoint for the parameter SPN 1090.

Data Length: 1 byte
Resolution: 8 kPa/bit, 0 offset
Data Range: 0 to 2,000 kPa Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64994

SPN 2609 Cab A/C Refrigerant Compressor Outlet Pressure

This is the gage pressure at the compressor outlet in the cab air conditioning system.

Data Length: 1 byte

Resolution: 16 kPa/bit, 0 offset

Data Range: 0 to 4000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64993

SPN 2610 Solar Intensity Percent

This is the solar radiation (power density) falling on the vehicle in percent of the maximum sensor value (SPN 2611). Currently this is in the infra-red spectrum.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64992

SPN 2611 Solar Sensor Maximum

This is the maximum value which can be reported by the sensor for the solar intensity. (This is a configuration parameter)

Data Length: 1 byte

Resolution: 0.4 mW/cm² per bit, 0 offset

Data Range: 0 to 100 mW/cm²

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64992

SPN 2612 Front Wheel Drive Actuator Status

Feedback on the front wheel drive actuator.

00 Front Wheel Drive Actuator not engaged

01 Front Wheel Drive Actuator engaged

10 Error

11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64991

SPN 2613 *Drive Axle Lube Pressure*

The drive axle lubricant pressure with location determined by Drive Axle Location (SPN 930).

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 2614 *Steering Axle Lube Pressure*

The steering axle lubricant pressure.

Data Length: 1 byte

Resolution: 4 kPa/bit, 0 offset

Data Range: 0 to 1000 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65273

SPN 2615 *Engine Throttle Synchronization Mode Status*

The status of the Throttle Synchronization Mode. Throttle Synchronization Mode is used to indicate which throttle, if any, is currently being used for the synchronized throttle.

0000 Not Synchronized

0001 Synchronized Center

0010 Synchronized Port

0011 Synchronized Starboard

0100 Synchronized Master

0101-1110 Reserved

1111 Take no action

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64988

SPN 2616 *Trolling Mode Status*

The status of the Trolling Mode. Trolling mode limits the top speed. Full range travel of the throttle level spans from low idle engine speed to maximum trolling speed.

00 Trolling mode is OFF.

01 Trolling mode is ACTIVE.

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64988

SPN 2617 *Slow Vessel Mode Status*

The status of the Slow Vessel Mode. Slow Vessel Mode puts the engine in a lower-than-normal low idle speed during docking or other slow vessel operations.

00 Slow vessel mode is OFF.

01 Slow vessel mode is ACTIVE.

10 Reserved

11 Take no action

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64988

SPN 2629 *Engine Turbocharger 1 Compressor Outlet Temperature*

Temperature of the air exiting the turbocharger 1 compressor outlet

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64979

SPN 2630 (R) *Engine Charge Air Cooler Outlet Temperature*

Temperature of combustion air after it exits from the Charge Air Cooler but before any mixing of Recirculated Exhaust Gas.

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65129

SPN 2659 *Engine Exhaust Gas Recirculation (EGR) Mass Flow Rate*

Flow rate of gas through the EGR system. Flow rate of the exhaust gas being recirculated into the combustion air.

Data Length: 2 bytes

Resolution: 0.05 kg/h per bit, 0 offset

Data Range: 0 to 3212.75 kg/h Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61450

SPN 2660 *Joystick 1 X-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 % Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64982

SPN 2661 *Joystick 1 Y-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 % Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64982

SPN 2662 *Joystick 1 Grip X-Axis Position*

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64983

SPN 2663 *Joystick 1 Grip Y-Axis Position*

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64983

SPN 2664 *Joystick 1 Theta-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64983

SPN 2665 *Joystick 1 X-Axis Lever Right Positive Position Status*

Reports when the current joystick position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral

01 On positive side of Neutral

10 Error Indicator

11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64982

SPN 2666 Joystick 1 Y-Axis Lever Forward Positive Position Status

Reports when the current joystick position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral
01 On positive side of Neutral
10 Error Indicator
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64982

SPN 2667 Joystick 1 Grip X-Axis Lever Right Positive Position Status

Reports when the current joystick grip position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral
01 On positive side of Neutral
10 Error Indicator
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64983

SPN 2668 Joystick 1 Grip Y-Axis Lever Forward Positive Position Status

Reports when the current joystick grip position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral
01 On positive side of Neutral
10 Error Indicator
11 Not Available

Data Length: 2 bits

11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64982

SPN 2697 Joystick 2 X-Axis Position

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64984

SPN 2698 Joystick 2 Y-Axis Position

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64984

SPN 2699 Joystick 2 Grip X-Axis Position

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64985

SPN 2700 Joystick 2 Grip Y-Axis Position

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits
Resolution: 0.1 %/bit, 0 offset
Data Range: 0 to 102 % Operational Range: 0.0 to 100.0%
Type: Measured
Supporting information:
PGN reference: 64985

SPN 2701 Joystick 2 Theta-Axis Position

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits
Resolution: 0.1 %/bit, 0 offset
Data Range: 0 to 102 % Operational Range: 0.0 to 100.0%
Type: Measured
Supporting information:
PGN reference: 64985

SPN 2702 Joystick 2 X-Axis Lever Right Positive Position Status

Reports when the current joystick position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral
01 On positive side of Neutral
10 Error Indicator
11 Not Available

Supporting information:

PGN reference: 64984

SPN 2734 *Joystick 3 X-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64986

SPN 2735 *Joystick 3 Y-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64986

SPN 2736 *Joystick 3 Grip X-Axis Position*

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64987

SPN 2737 *Joystick 3 Grip Y-Axis Position*

The position of the joystick grip in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64987

SPN 2738 *Joystick 3 Theta-Axis Position*

The position of the joystick in the relative motion of travel from the neutral position. Position value of 0 is Neutral and position value 1000 (100%) is the end of linear zone. Value of 1022 indicates an error has occurred.

Data Length: 10 bits

Resolution: 0.1 %/bit, 0 offset

Data Range: 0 to 102 %

Operational Range: 0.0 to 100.0%

Type: Measured

Supporting information:

PGN reference: 64987

SPN 2739 *Joystick 3 X-Axis Lever Right Positive Position Status*

Reports when the current joystick position is on the positive travel side (forward, right, clockwise, up) relative to the neutral position for that axis of travel.

00 Not on Positive side of Neutral

01 On positive side of Neutral

Supporting information:

PGN reference: 64986

SPN 2789 Engine Turbocharger 1 Calculated Turbine Inlet Temperature

Calculated value of turbine inlet temperature based on engine operating conditions, such as intake manifold temperature, charge fuel ratio, injection timing, and engine speed. Use SPN 1180 for actual measured inlet temperature.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64981

SPN 2790 Engine Turbocharger 1 Calculated Turbine Outlet Temperature

Calculated value of turbocharger compressor outlet air temperature. Temperature of air exiting the turbocharger compressor and before entering charge air cooler. The estimate is based on turbo speed and measured turbocharger compressor inlet temperature. Use SPN 1184 for actual measured outlet temperature.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64981

SPN 2791 Engine Exhaust Gas Recirculation (EGR) Valve Control

Desired percentage of maximum Exhaust Gas Recirculation (EGR) valve opening. 0% means valve is closed. 100% means maximum valve opening (full gas flow).

Data Length: 2 bytes
Resolution: 0.0025 %/bit, 0 offset
Data Range: 0 to 160.6375 % Operational Range: 0 to 100%
Type: Status
Supporting information:
PGN reference: 64981

SPN 2792 Engine Variable Geometry Turbocharger (VGT) Air Control Shutoff Valve

Isolates vehicle brake air from the Variable Geometry Turbocharger (VGT) system when engine is not running. This valve prevents vehicle air from bleeding off through the VGT Control Valve when engine is not in use. Primary vehicle air system from air tanks feed the VGT Air Control Shutoff Valve, which in turn provides air to the VGT Control Valve when the key switch is 'ON'. The VGT Control Valve delivers air to the VGT actuator to adjust turbocharger geometry.

00 VGT Air Control Shutoff Valve is Off
01 VGT Air Control Shutoff Valve is On

Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64981

SPN 2793 *Laser Strike Data Latency*

Time from laser strike to CAN message transmission. This parameter will be reported by survey receiver type devices only. Byte 3 (SPN 2576) of PGN 65141 identifies the type of Laser Receiver.

Data Length: 2 bytes
Resolution: 51.2 us/bit, 0 offset
Data Range: 0 to 3.289856 s Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65141

SPN 2794 *Absolute Laser Strike Position*

Laser Strike location on the survey type laser receiver.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, 0 offset
Data Range: 0 to 6,425.5 mm (0 to 6.4255 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65141

SPN 2795 *Engine Variable Geometry Turbocharger (VGT) 1 Actuator Position*

Sensor that measures the position of the variable geometry turbocharger actuator. A position of 0% indicates the actuator is in the position creating the smallest geometry turbocharger. A position of 100% represents the largest geometry turbocharger.

Data Length: 1 byte
Resolution: 0.4 %/bit, 0 offset
Data Range: 0 to 100 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64981

SPN 2796 *Transfer Case Selector Switch*

Operator switch to select the condition of the transfer case. The possible states are 2 wheel drive, 4 wheel drive and neutral .

000 2 wheel
001 4 wheel
010 Neutral
011 - 101 Reserved for SAE assignment
110 Error indicator

Data Length: 3 bits
Resolution: 8 states/3 bit, 0 offset
Data Range: 0 to 7 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64980

SPN 2799 *Engine Turbocharger 2 Compressor Outlet Temperature*

Temperature of the air exiting the turbocharger 2 compressor outlet

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64979

SPN 2800 *Engine Turbocharger 3 Compressor Outlet Temperature*

Temperature of the air exiting the turbocharger 3 compressor outlet

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64979

SPN 2801 *Engine Turbocharger 4 Compressor Outlet Temperature*

Temperature of the air exiting the turbocharger 4 compressor outlet

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64979

SPN 2802 *Data Memory Usage*

The used storage capacity of the data buffer memory internal to an ECU, such as a data logger.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64978

SPN 2803 *Keep-Alive Battery Consumption*

The capacity consumed from the direct battery connection since the key was last turned off. This value is maintained and does not accumulate while the key switch is on. The value is reset to 0 when the key switch is turned to the off position.

Data Length: 2 bytes

Resolution: 1 mAhr/bit, 0 offset

Data Range: 0 to 64255mAhr (64.255Ahr) Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64978

SPN 2804 *FMS-standard Diagnostics Supported*

Status signal which indicates if the FMS Vehicle Interface (FMS Gateway) supports the handling of diagnostic messages from the vehicle network onto the FMS network.

The FMS gateway does NOT support the re-broadcast of diagnostics messages present on the vehicle network.

If this 'FMS-standard Diagnostics Supported' feature is supported by the FMS Gateway, the FMS Gateway will support the requests for diagnostics information (from the FMS device) onto the vehicle network and pass the responses onto the FMS network.

Note: This feature of the FMS Gateway is independent of the 'FMS-standard Requests Supported'. The FMS Gateway may support diagnostics without supporting the 'FMS-standard Requests Supported' function, or visa-versa.

00 Diagnostics Is Not Supported

01 Diagnostics Is Supported

PGN reference: 64977

SPN 2806 (R) *FMS-standard SW-version supported.*

Information that identifies which issue level of the FMS-standard document the software included in the FMS gateway supports. Four bytes, representing xx.yy type revision level identification.

Information to be ASCII equivalent of the numeric revision level of the FMS document, 00.01 to 99.99. The first released version will be 01.00.

Note:

Byte 2 and byte 3 represents the SW version supported for trucks. Version number in the format ab.cd where Byte 2 represents "a" ASCII and Byte 3 represents "b" ASCII.

Byte 4 and byte 5 represents the SW version supported for bus and coaches; version number in the format ab.cd where Byte 4 represents "c" ASCII and Byte 5 represents "d" ASCII.

Data Length: 4 bytes

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64977

SPN 2809 *Engine Air Filter 2 Differential Pressure*

Change in engine air system pressure, measured across the second air filter, due to the filter and any accumulation of solid foreign matter on or in the filter.

This is for monitoring the air filter on the inlet to the second turbocharger. Filter numbering follows the guidelines noted in section Naming Convention For Engine Parameters.

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64976

SPN 2810 *Engine Air Filter 3 Differential Pressure*

Change in engine air system pressure, measured across the third air filter, due to the filter and any accumulation of solid foreign matter on or in the filter.

This is for monitoring the air filter on the inlet to the third turbocharger. Filter numbering follows the guidelines noted in section Naming Convention For Engine Parameters.

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64976

SPN 2811 *Engine Air Filter 4 Differential Pressure*

Change in engine air system pressure, measured across the fourth air filter, due to the filter and any accumulation of solid foreign matter on or in the filter.

This is for monitoring the air filter on the inlet to the fourth turbocharger. Filter numbering follows the guidelines noted in section Naming Convention For Engine Parameters.

Data Length: 1 byte

Resolution: 0.05 kPa/bit, 0 offset

Data Range: 0 to 12.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64976

SPN 2812 *Engine Overspeed Test*

The engine overspeed test signal as measured by the reporting ECM. Engine Overspeed Test is a mechanism to simulate engine overspeed situations, while operating the engine within the engine's safe operating range.

State signal which indicates when the overspeed test input to the ECM is being driven.

00 Engine Overspeed Test Not Active
01 Engine Overspeed Test Active

PGN reference: 65252

SPN 2863 (R) *Front Operator Wiper Switch*

State of operation selected by operator switch for the Wiper in front of the operator position. This parameter, 'Front Operator Wiper Switch' should be used for the control information if either of the other wiper switch parameters is 'Not Available' and the associated wiper still needs to be controlled.

0000 Off
0001 Low
0010 Medium
0011 High
0100 Delayed 1 (used for the first delay choice when the wiper switch position controls the delay)
0101 Delayed 2 (used for the second delay choice when the wiper switch position controls the delay)
0110 Mist (position where external sensor controls wiper rate)
0111 - 1110 Reserved
1111 Not available (do not change)

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64973

SPN 2864 (R) Front Non-operator Wiper Switch

State of operation selected by operator switch for the front wiper not in front of the operator position. The parameter, 'Front Operator Washer Switch' should be used for the control information if this parameter is 'Not Available' and the associated washer still needs to be controlled.

0000 Off
0001 Low
0010 Medium
0011 High
0100 Delayed 1 (used for the first delay choice when the wiper switch position controls the delay)
0101 Delayed 2 (used for the second delay choice when the wiper switch position controls the delay)
0110 Mist (position where external sensor controls wiper rate)
0111 - 1110 Reserved
1111 Not available (do not change)

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64973

SPN 2865 (R) Rear Wiper Switch

State of operation selected by operator switch for the rear wiper. The parameter, 'Front Operator Washer Switch' should be used for the control information if this parameter is 'Not Available' and the associated washer still needs to be controlled.

0000 Off
0001 Low
0010 Medium
0011 High
0100 Delayed 1 (used for the first delay choice when the wiper switch position controls the delay)
0101 Delayed 2 (used for the second delay choice when the wiper switch position controls the delay)
0110 Mist (position where external sensor controls wiper rate)
0111 - 1110 Reserved
1111 Not available (do not change)

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64973

SPN 2866 (R) Front Operator Washer Switch

State of operation selected by operator switch for the washer in front of the operator position. This parameter, 'Front Operator Washer Switch' should be used for the control information if either of the other washer switch parameters is 'Not Available' and the associated washer still needs to be controlled.

000 Off

PGN reference: 64973

SPN 2869 *Front Operator Wiper Delay Control*

Time between cycles of the front operator side wiper (i.e. from end of cycle 'n' to start of cycle 'n+1') as selected by the operator control (switch, etc.) in percentage of position with maximum position corresponding to maximum delay selectable. This parameter, 'Front Operator Wiper Delay Control' should be used for the delay information if either of the other delay parameters is 'Not Available' and the function needs to be provided.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64973

SPN 2870 *Front Non-operator Wiper Delay Control*

Time between cycles of the front non-operator side wiper (i.e. from end of cycle 'n' to start of cycle 'n+1') as selected by the operator control (switch, etc.) in percentage of position with maximum position corresponding to maximum delay selectable. The parameter, 'Front Operator Wiper Delay Control' should be used for the delay information if this parameter is 'Not Available' and the function needs to be provided.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64973

SPN 2871 *Rear Wiper Delay Control*

Time between cycles of the rear wiper (i.e. from end of cycle 'n' to start of cycle 'n+1') as selected by the operator control (switch, etc.) in percentage of position with maximum position corresponding to maximum delay selectable. The parameter, 'Front Operator Wiper Delay Control' should be used for the delay information if this parameter is 'Not Available' and the function needs to be provided.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64973

SPN 2872 (R) Main Light Switch

A 4 bit parameter to indicate the selected position of the operator's main light switch.

0000 Off - The position by which the operator selects that none of the lamps are to be on.

0001 Park On - The position by which the operator selects that the park lamps are to be on.

0010 Headlight On - The position by which the operator selects that the headlamps are to be on.

0011 Headlight and Park On - The position by which the operator selects that Both the Headlamps and the Park lamps are to be on.

0100 - 0111 Reserved

1000 Delayed Off - The position by which the operator selects that a certain set of lamps are to come On and then are to be turned Off following a delay time (Operators Desired - Delayed Lamp Off Time).

1001 - 1101 Reserved

1110 Error

1111 Not available (do not change)

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2873 (R) Work Light Switch

A 4 bit parameter to indicate the selected position of the operator's work light switch. In Ag applications the work lights are often referred to as field lights. In on-highway applications the work lights are often referred to as clearance lights and may or may not be operated by a switch separate from the main light switch.

0000 Off - The position by which the operator selects that none of the work lamps are to be on.

0001 Work Light Combination #1 On - The position by which the operator selects that the lamps in the combination defined as Work Light Combination #1 are to be on.

0010 Work Light Combination #2 On - The position by which the operator selects that the lamps in the combination defined as Work Light Combination #2 are to be on.

0011 Work Light Combination #3 On - The position by which the operator selects that the lamps in the combination defined as Work Light Combination #3 are to be on.

0100 Work Light Combination #4 On - The position by which the operator selects that the lamps in the combination defined as Work Light Combination #4 are to be on.

0101-1101 Reserved

1110 Error

1111 Not available (do not change)

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2874 (R) High-Low Beam Switch

A 2 bit parameter to indicate the selected position of the operator's high/low beam select switch.

00 Low Beam Selected
01 High Beam Selected
10 Error
11 Not available (do not change)

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2875 (R) Hazard Light Switch

A 2 bit parameter to indicate the selected position of the operator's hazard light switch.

00 Hazard Lamps to be Off
01 Hazard Lamps to be Flashing
10 Error
11 Not available (do not change)

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2876 (R) Turn Signal Switch

A 4 bit parameter to indicate the selected position of the operator's turn signal switch.

0000 No Turn being signaled
0001 Left Turn to be Flashing
0010 Right turn to be Flashing
0011 - 1101 Reserved
1110 Error (to include both left and right selected simultaneously)
1111 Not available (do not change)

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2877 *Operators Desired - Delayed Lamp Off Time*

A 16 bit parameter to be associated with Delayed Off position (1000 binary) of the Main Light Switch. This parameter indicates the time the operator wishes to have elapse following the Main Light switch being placed in Delayed Off position before the defined lights turn back off. The Operator's definition as to which lamps are to turn On (and then Off of course) when the Main Light Switch is in the Delayed Off position. The specific lamps are not identified within this message, but are to be stored by whatever device (ecu) is planning to send the lamp command message for said lamps. Said device must also provide the means for the operator to enter and/or adjust said definition.

Data Length: 2 bytes

Resolution: 1 s/bit, 0 offset

Data Range: 0 to 64,255 s

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2878 *Operators Desired Back-light*

A 8 bit parameter to indicate the level of back lighting the operator has selected for displays. This is to be differentiated from the Illumination Brightness Percent (SPN:1487 PGN:53248 Cab Illumination Message) which is sent to the displays to tell them what level to be at. This is the operator desired level (as sensed by operator controls) for those system where the operator controls are monitored by an ecu separate from the ecu sending the command to the displays. Note each display (if appropriate) will need to have its own balance function to compensate its nominal brightness to the same level of that of all other displays. This is especially important for systems with back-lights which may change noticeable with aging. In other words it will be necessary within a vehicle to scale all of the displays down to the same level as the dimmest display (since, obviously you can not make the dimmest brighter).

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64972

SPN 2879 *Engine Alternate Droop Accelerator 2 Select*

Same description as Engine Alternate Droop Accelerator 1 Select (SPN 2881) except that the selections may apply to Accelerator 2.

0000 – Normal Droop Setting is selected

0001 thru 1101 – One of Alternate Droop Setting 1 through 13 (in sequential order) is selected

1110 – Error condition

1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64971

SPN 2880 *Engine Operator Primary Intermediate Speed Select*

Allows the operator to select one of 13 preprogrammed Intermediate Speed Control settings. If no speed setting is requested, the engine operates normally. The Intermediate Speed Control is widely used in the Industrial application to control the engine to an intermediate speed setting which can either replace the accelerator position control altogether, or limit the accelerator position control to a selectable speed point minimum or maximum.

0000 – indicates that the ISC functionality is not requested, engine operates normally
0001 thru 1101 – indicates that the ISC Setting 1 thru 13 (in sequential order) is selected
1110 – error condition
1111 – not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64970

SPN 2881 *Engine Alternate Droop Accelerator 1 Select*

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to Accelerator 1.

0000 – Normal Droop Setting is selected
0001 thru 1101 – One of Alternate Droop Setting 1 through 13 (in sequential order) is selected
1110 – Error condition
1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64971

SPN 2882 Engine Alternate Rating Select

In some off-highway applications it may be desirable to have multiple engine ratings available for selection by the operator. There is the default engine rating, which provides the maximum available power across the range of operation. There are additional engine ratings which the user can select that allow for alternate fueling across the operational range. Engine rating selection number 1 is the maximum rating. Selection number 2 is the next highest, selection 3 next highest, etc. The selection impacts the operating points in the Engine Configuration.

0 – indicates that Maximum Power Fueling is selected
1 – indicates that the Alternate Power Fueling 1 is selected
2 – indicates that the Alternate Power Fueling 2 is selected
3 – indicates that the Alternate Power Fueling 3 is selected
4 thru 253 - indicates that the Alternate Power Fueling 4 thru 253 (in sequential order) is selected.
254 – Error condition.
255 – Not available

Data Length: 1 byte
Resolution: 1 selection/bit, 0 offset
Data Range: 0 to 255 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64971

SPN 2883 Engine Alternate Low Idle Switch

Operator switch which selects between two low idle speeds, default and alternate.

The normal programmed low idle is the default low idle, and when the Alternate Low Idle switch is activated, a alternate preprogrammed low idle speed is selected. The accelerator position control operates as normal but is now bounded to a different low idle speed. This selection impacts Point 1 on the Engine Configuration.

00 Default low idle point is selected
01 Alternate low idle point is selected
10 Error
11 Not available or Unused

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64971

SPN 2884 Engine Auxiliary Governor Switch

This is the On/Off operation of the Auxiliary Governor feature switch. This feature is used to allow engine speed to be controlled by an auxiliary input such as pressure or tailshaft speed. This switch position indicates whether this feature is requested or not.

00 – Auxiliary Governor is disabled
01 – Auxiliary Governor is enabled
10 – Error condition

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64971

SPN 2885 *Engine Alternate Droop Auxiliary Input Select*

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to the Alternate Droop Auxiliary Input.

0000 – Normal Droop Setting is selected

0001 thru 1101 – One of Alternate Droop Setting 1 through 13 (in sequential order) is selected

1110 – Error condition

1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64971

SPN 2886 *Engine Alternate Droop Remote Accelerator Select*

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to the Remote Accelerator.

0000 – Normal Droop Setting is selected

0001 thru 1101 – One of Alternate Droop Setting 1 through 13 (in sequential order) is selected

1110 – Error condition

1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64971

SPN 2887 *Total Count of Configuration Changes Made*

Total number of times changes have been made to any of the configurable parameters.

Data Length: 2 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 64,255 counts

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64969

SPN 2888 *Engine Alternate Rating Select State*

In some off-highway applications it may be desirable to have multiple engine ratings available for selection by the operator. There is the default engine rating, which provides the maximum available power across the range of operation. There are additional engine ratings which the engine controller may use that allow for alternate fueling across the operational range. Engine rating number 1 is the maximum rating. Rating number 2 is the next highest, rating 3 next highest, etc.

00 – Control state is Maximum Power Fueling
01 – Control state is Alternate Power Fueling 1
02 – Control state is Alternate Power Fueling 2
03 – Control state is Alternate Power Fueling 3
04 thru 253 - Control state is Alternate Power Fueling 4 thru 253 (in sequential order)
254 – SAE reserved
255 – Not available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2889 *Engine Alternate Droop Accelerator 1 Select State*

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections may apply to Accelerator 1. This parameter indicates which state has been selected by the controlling ECM.

0000 – Control state is Normal Droop Setting
0001 thru 1101 – Control state is one of Alternate Droop Setting 1 through 13 (in sequential order)
1110 – SAE reserved
1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2890 *Engine Multi-Unit Sync State*

This feature is widely used in Industry to operate multiple engines from a single command source. A master engine will "synchronize" one or more slave engines to operate at the same speed. This feature is requested by an operator switch, this parameter indicates the state of the feature as determined by the controlling ECM.

00 Control State is Functionality disabled (off)
01 Control State is Functionality enabled (on)
10 SAE reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2891 *Engine Alternate Low Idle Select State*

In many applications, it is desirable that an alternate low idle speed setting be made available via switch input. The normal programmed low idle is the default low idle, and when the Alternate Low Idle feature is activated, an alternate preprogrammed low idle speed is selected. The accelerator position control operates as normal but is now bounded to a different low idle speed. This selection impacts Point 1 on the Engine Configuration.

00 – Normal idle state
01 – Alternate idle state
10 – SAE reserved
11 – not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2892 *Engine Operator Primary Intermediate Speed Select State*

13 preprogrammed intermediate speed control settings are available for the controlling ECM to select. If no speed setting is requested, the engine operates normally. The Intermediate Speed Control is widely used in the Industrial application to control the engine to an intermediate speed setting which can either replace the accelerator position control altogether, or limit the accelerator position control to a selectable speed point minimum or maximum. This parameter indicates which state has been selected by the controlling ECM.

0000 – Control state is ISC functionality is not requested, engine operates normally

0001 thru 1101 – Control state is ISC Setting 1 thru 13 (in sequential order)

1110 – SAE reserved

1111 – not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64968

SPN 2893 *Engine Alternate Droop Accelerator 2 Select State*

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to Accelerator 2.

0000 – Control's state is Normal Droop Setting

0001 thru 1101 – Control's state is One of Alternate Droop Setting 1 through 13 (in sequential order)

1110 – SAE reserved

1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2894 Engine Alternate Droop Remote Accelerator Select State

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to Remote Accelerator.

0000 – Control state is Normal Droop Setting

0001 thru 1101 – Control state is One of Alternate Droop Setting 1 through 13 (in sequential order)

1110 – SAE reserved

1111 – Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2895 Engine Alternate Droop Auxiliary Input Select State

In some off-highway applications it may be desirable to have multiple droop settings available across the range of engine operation. For example, in an agricultural tractor application, this functionality allows a higher engine speed during low load so as to maximize vehicle speed driven between fields on the road. Another use of the alternate droop settings would be to provide functionality for maintaining an engine speed independent of the applied load on demand. There is a normal droop setting, and up to 13 additional preprogrammed droop settings which are user selectable by switching. The selections apply to Auxiliary Input.

0000 – Control state is Normal Droop Setting

0001 thru 1101 – Control state is One of Alternate Droop Setting 1 through 13 (in sequential order)

1110 – SAE reserved

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2896 Engine Auxiliary Governor State

This is the Engine Auxiliary Governor feature. This feature is used to allow engine speed to be controlled by an auxiliary input such as pressure or tailshaft speed. This feature is requested by an operator switch, this parameter indicates the state of the feature as determined by the controlling ECM.

00 – Control State is Auxiliary Governor disabled

01 – Control State is Auxiliary Governor enabled

10 – SAE reserved

11 – Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64967

SPN 2897 *Operator PTO Memory Select Switch*

Measured state of the operator PTO memory select switch. This switch selects which of the two available memory locations is to be used to store the dynamically assigned value. This speed will be set using the PTO set switch and modified using the PTO accelerate and coast/decelerate switches.

00 PTO set speed memory 1 selected
01 PTO set speed memory 2 selected
10 error
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65264

SPN 2898 *Engine Start Enable Device 2 Configuration*

The start enable device installed for start enable device 2.

0000 - no start enable device 2 installed
0001 - glow plugs installed
0010 - fuelled start installed
0011 - ether injection installed
0100 - electric inlet air heater installed
0101 - 1110 - reserved
1111 - not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64966

SPN 2899 *Engine Start Enable Device 1 Configuration*

The start enable device installed for start enable device 1.

0000 - no start enable device 1 installed
0001 - glow plugs installed
0010 - fuelled start installed
0011 - ether injection installed
0100 - electric inlet air heater installed
0101 - 1110 - reserved
1111 - not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64966

SPN 2900 *Transmission Engine Crank Enable*

State signal from the transmission indicating if the transmission's status is such that engine cranking is allowed (i.e. at a minimum, transmission is in neutral and the driveline is disengaged). As sender of this information, the transmission is responsible for correct indication immediately upon first broadcast of this parameter.

As with hard-wired neutral start implementations, those utilizing this parameter should consider the impact of the transmission or other controllers 'resetting' due to voltage drops during the engine start sequence.

The vehicle system design should also consider the impact of timing latency in the engine starting sequence. For example, the turn of an ignition key from 'off' to 'start' may happen more quickly than the transmission controller can boot up, determine its' current state of being, and begin broadcasting information over the J1939 datalink.

00 - Cranking disabled; engine cranking is prohibited by the transmission

01 - Cranking enabled; engine cranking is allowed by the transmission

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65098

SPN 2901 *ECU Part Number*

The part number of the physical ECU.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64965

SPN 2902 *ECU Serial Number*

The serial number of the physical ECU.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64965

SPN 2903 ECU Location

The location of the ECU within a network.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64965

SPN 2904 ECU Type

The type of ECU. One example of a use of the ECU type could be for classifying ECU capabilities, such as I/O.

Data Length: Variable - up to 200 characters ("*" delimited)

Resolution: ASCII, 0 offset

Data Range: 0 to 255 per byte

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64965

SPN 2911 Halt brake switch

Switch signal which indicates the position of the halt brake switch.

00 Halt brake switch passive

01 Halt brake switch active

10 Error

11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61441

SPN 2912 Hill holder mode

Signal which indicates the current mode of the hill holder function.

000 Inactive

001 Active

010 Active, but will change to inactive in a short time. (This mode may be used to warn the driver)

011 - 101 Not defined

110 Reserved

111 Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64964

SPN 2913 *Halt brake mode*

Signal which indicates the current mode of the halt brake function.

000	Inactive
001	Active
010	Active, but not functioning properly. (This mode may be used to warn the driver)
011 - 101	Not defined
110	Reserved
111	Not available

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64964

SPN 2914 *XBR EBI Mode*

The XBR EBI (Endurance Brake Integration) Mode is used as an input for the brake system to prescribe the use of endurance brakes like retarders or engine brakes.

00 - No Endurance Brake Integration allowed

The demanded acceleration must be realized by the brake system by using only the foundation brakes. During an active XBR request, the brake system must not actively demand brake torque from other braking devices like retarders or engine brakes.

01 - Only Endurance Brakes allowed

The demanded acceleration must be realized by the brake system by demanding brake torque from other brake devices like retarders or engine brakes. The foundation brake itself must not be used (e.g. to reduce brake lining wear).

10 - Endurance Brake Integration allowed

The demanded acceleration may be realized by the brake system by using the foundation brakes and/or by demanding brake torque from other brake devices like retarders or engine brakes.

11 - Not defined

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 1024

SPN 2915 *XBR Priority*

The XBR Priority is used as an input to the brake system to manage the priority of overlapping external and internal requests.

00 - Highest priority – used for emergency situations, e.g. for future Collision Avoidance System. This mode overrides any brake protection measures of the brake system.

01 - High priority – not defined

10 - Medium priority – used for ACC-Systems. This mode does not override brake protection measures of the brake system.

11 - Low priority – used in "override disabled" XBR Control Mode

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 1024

SPN 2916 XBR Control Mode

The XBR Control Mode is used as an input to the brake system and defines how the external acceleration demand has to be realized.

00 - Override disabled – Disable any existing control commanded by the source of this command.

01 - Acceleration control with addition mode - Add the XBR acceleration demand to the driver's acceleration demand.

10 - Acceleration control with maximum mode - Execute the XBR acceleration demand if it is higher than the driver's acceleration demand.

11 - Not defined

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 1024

SPN 2917 XBR System State

This parameter indicates which external brake control is allowed.

00 - Any external brake demand will be accepted (brake system fully operational)

01 - Only external brake demand of highest XBR Priority (00) will be accepted (e.g. because the temperature limit of the brake system is exceeded)

10 - No external brake demand will be accepted (e.g. because of fault in brake system)

11 - not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64964

SPN 2918 XBR Active Control Mode

This parameter indicates which XBR Control Mode is executed by the brake system.

0000 No brake demand being executed (default mode)

0001 Driver's brake demand being executed, no external brake demand

0010 Addition mode of XBR acceleration control being executed

0011 Maximum mode of XBR acceleration control being executed

0100 - 1110 Reserved for SAE assignment

1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64964

SPN 2919 *Foundation Brake Use*

This parameter indicates if the brake system presently uses the foundation brakes.

00 Foundation brakes not in use
01 Foundation brakes in use
10 Reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64964

SPN 2920 *External Acceleration Demand*

Parameter provided to the brake system from external sources. This is the acceleration which the brake system is expected to realize. It is specified as an absolute acceleration in reference to the road. Positive values lead to increasing vehicle speed, negative values lead to decreasing vehicle speed. Note: Normally only the negative data range is used, but e.g. in case of downhill driving also positive values are possible.

Data Length: 2 bytes

Resolution: 1/2048 m/s² per bit, -15.687 m/s² offset

Data Range: -15.687 to +15.687 m/s²

Operational Range: -10.0 to +10.0 m/s²

Type: Status

Supporting information:

PGN reference: 1024

SPN 2921 *XBR Acceleration Limit*

The brake system may temporarily or generally limit the maximum brake performance available for external systems. A temporary limit may be necessary due to high brake temperature; a general limit may be defined by the vehicle manufacturer, e.g. a value of -2.5 m/s² due to liability reasons. The actual limit is communicated to the external systems that request braking. The limit is only effective in the XBR Priorities 01 to 11. It is specified as an absolute acceleration in reference to the road.

Data Length: 1 byte

Resolution: 0.1 m/s² per bit, -12.5 m/s² offset

Data Range: -12.5 to +12.5 m/s²

Operational Range: -10.0 to +10.0 m/s²

Type: Status

Supporting information:

PGN reference: 64964

SPN 2922 Steerable Lift Axle Lowering Inhibit

A signal which indicates if lowering of lifted axle is allowed or inhibited.

00 Lowering allowed
01 Lowering inhibited
10 Reserved
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61451

SPN 2923 Status of Steering Axle

A signal which indicates different states of the steering axle

0000 Axle steering not active (adhesion steering)
0001 Axle steering active
0010 Axle centered
0011 Axle centered, because of an error
0100 Axle not active because of an error (adhesion steering)
0101 Axle steering in special mode (diagnosis, calibration mode)
0110-1110 Reserved for SAE Assignment
1111 Not available

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61451

SPN 2924 Steering Type

Indicates the different types of steering systems (ref. ECE Regulation 79 paragraph 2.5)

0000 Main steering system
0001 Auxiliary steering equipment
0010-1110 Reserved for Assignment by SAE
1111 Not Available

0000 Main steering system - The steering equipment of a vehicle which is mainly responsible for determining the direction of travel.

0001 Auxiliary steering equipment - A system in which the wheels on axle(s) of vehicles of categories M and N are steered in addition to the wheels of the main steering equipment in the same or opposite direction to those of the main steering equipment and/or the steering angle of the front and/or the rear wheels may be adjusted relative to vehicle behaviour.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61451

SPN 2925 *Type of Steering Forces*

Type of Steering Forces (Ref. ECE Regulation 79 paragraph 2.5)

0000	Manual steering equipment
0001	Power assisted steering equipment
0010	Full power steering equipment
0011	Self tracking steering equipment
0100-1110	Reserved for SAE assignment
1111	Not Available

0000 Manual steering equipment - The steering forces result solely from the muscular effort of the driver.

0001 Power assisted steering equipment - The steering forces result from both the muscular effort of the driver and the energy supply or supplies.

0010 Full power steering equipment - The steering forces are provided solely by one or more energy supplies.

0011 Self tracking steering equipment - A system designed to create a change of steering angle on one or more wheels only when acted upon by forces and/or moments applied through the tire to road contact.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61451

SPN 2926 *Type of Steering Transmission*

Type of Steering Transmission (Ref. ECE Regulation 79 paragraph 2.6)

0000	Purely mechanical steering transmission
0001	Purely hydraulic steering transmission
0010	Purely electric steering transmission
0011	Hybrid steering transmission
0100-1110	Reserved for SAE assignment
1111	Not available

0000 Purely mechanical steering transmission - A steering transmission in which the steering forces are transmitted entirely by mechanical means.

0001 Purely hydraulic steering transmission - A steering transmission in which the steering forces, somewhere in the transmission, are transmitted only by hydraulic means.

0010 Purely electric steering transmission - A steering transmission in which the steering forces, somewhere in the transmission, are transmitted only through electric means.

0011 Hybrid steering transmission - A steering transmission in which part of the steering forces is transmitted through one and the other part through another of the above mentioned means. However, in the case where any mechanical part of the transmission is designed only to give position feedback and is too weak to transmit the total sum of the steering forces, this system shall be considered to be purely hydraulic or purely electric steering transmission.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61451

SPN 2927 *Actual Inner wheel steering angle*

Signal which indicates the actual inner wheel steering angle. See Figure SPN2927_A for explanation of positive and negative angles.

Data Length: 2 bytes

Resolution: 1/256 deg/bit, -125 deg offset

Data Range: -125 to 125 deg

Operational Range: same as data range

Type: Measured

Supporting information: See Appendix D - SPN 2927

PGN reference: 61451

SPN 2928 *Axle Location*

To identify to which of several similar devices (such as tires or fuel tanks) the information applies.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0016 would be left front tire.

Tire pressure for location 2316 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61451

SPN 2930 *Hydraulic Brake System Audible Warning Command*

Signal which commands an audible warning by the hydraulic braking system.

00 Audible warning off

01 Audible warning on

10 Reserved

11 Don't care

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64998

SPN 2931 Hydraulic Brake Fluid Level Switch

Signal which indicates whether the hydraulic fluid level in the reservoir(s) is sufficient.

- 00 Fluid level is not sufficient
- 01 Fluid level is sufficient
- 10 Error indicator
- 11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64998

SPN 2945 Active Shift Console Indicator

Signal from transmission control unit indicating which shift console (primary or secondary) it currently considers as the active shift selector input.

- 00 Primary shift console is active
- 01 Secondary shift console is active
- 10 Reserved
- 11 Not available

Note: In some applications such as refuse trucks, the transmission can be operated from two positions in the vehicle. The transmission control unit will accept changes in transmission requested gear (SPN 525) from the operator only from the active shift console. The transmission control unit determines which shift console is active based on a switch input controlled by the operator and transmission system state criteria.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65098

SPN 2948 Engine Intake Valve Actuation System Oil Pressure

The gage pressure of the oil in the hydraulic system that powers the engine intake valve actuation system

Data Length: 2 bytes

Resolution: 1/256 MPa/bit, 0 offset

Data Range: 0 to 251 Mpa

SPN 2978 Estimated Engine Parasitic Losses - Percent Torque

The calculated torque that indicates the estimated amount of torque loss due to engine parasitics, such as cooling fan, air compressor, air conditioning, etc. It is expressed as a percent of Engine Reference Torque.

When the data value of this parameter is equal to FB it means that all parasitic losses calculated by the engine are included in the Engine's Nominal Friction Percent Torque (SPN 514).

Data Length: 1 byte

Resolution: 1 %/bit, -125 % offset

Data Range: -125 to 125 %

Operational Range: 0 to 125%

Type: Status

Supporting information:

PGN reference: 65247

SPN 2979 Vehicle Acceleration Rate Limit Status

Status (active or not active) of the system used to limit maximum forward vehicle acceleration.

00 Limit not active
01 Limit active
10 Reserved
11 Not available

NOTE: The effects of emission control limits, such as engine exhaust smoke control, are specifically excluded; they are not considered to be part of a function to limit vehicle acceleration.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61443

SPN 2980 (R) Engine Fuel Valve 1 Outlet Absolute Pressure

Absolute Pressure of gas on outlet side of the first or only fuel system control valve. See SPN 3469 for the second fuel control valve.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

SPN 2985 *Transmission Shift Selector Display Mode Switch*

Status of the operator's switch used to 'toggle' through multiple display modes of a shift selector display.

When a shift selector display is capable of displaying more than just range information, this switch is toggled by the operator to move through the different display modes. If the selector has only two display modes, this switch may behave as a typical SPST switch. If the selector has more than two display modes, the switch may be momentary, where each activation indicates that the selector has scrolled through to the next subsequent display mode.

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65129

SPN 3026 *Transmission Oil Level Measurement Status*

Indicates if conditions are acceptable to obtain a valid transmission oil level measurement as conveyed in SPN 124 Transmission Oil Level or SPN 3027 Transmission Oil Level High / Low. If conditions are not acceptable, this parameter conveys to the operator what prevents conditions from being acceptable. Only one condition can be conveyed in this parameter at any given point in time. If multiple conditions exist, it is not important which condition is actually broadcast, as the driver must 'correct' each and every condition as it is presented before a valid oil level reading can be made. If multiple conditions exist that prevent a valid reading, the sender should broadcast one of those conditions until it is corrected; then the next condition can be conveyed to the operator, and so on.

0000 Conditions valid for transmission oil level measurement
0001 Conditions not valid – Settling timer still counting down
0010 Conditions not valid – Transmission in gear
0011 Conditions not valid – Transmission fluid temperature too low
0100 Conditions not valid – Transmission fluid temperature too high
0101 Conditions not valid – Vehicle moving; output shaft speed too high
0110 Conditions not valid – Vehicle not level
0111 Conditions not valid – Engine speed too low
1000 Conditions not valid – Engine speed too high

Type: Status

Supporting information:

PGN reference: 65272

SPN 3027 *Transmission Oil Level High / Low*

Amount of current volume of transmission sump oil compared to recommended volume. Positive values indicate overfill. Zero means the transmission fluid is filled to the recommended level.

Parameter Specific Indicator:

A value of FB hex indicates conditions are not acceptable for a valid fluid level measurement.

Data Length: 1 bytes

Resolution: 0.5 L/bit, -62.5 L offset

Data Range: -62.5 to 62.5 L

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65272

SPN 3028 *Transmission Oil Level Countdown Timer*

Once all vehicle conditions (such as vehicle stopped, etc) are met, some transmissions may require a 'settling time' to allow the fluid level to normalize. This parameter indicates how much of the required settling time remains. When time reaches 0, a valid oil level measurement value will be broadcast in SPN 3027 Transmission Oil Level High / Low.

SPN 3156 Blade Control Mode Switch

This parameter indicates the blade control mode switch state the user has set for the land leveling system. The switch value directly correlates to the current switch state, regardless of the switch being used. This parameter is intended for use in systems using only one parameter to control the blade movement (i.e. elevation). Systems using two independent parameters to control blade position, i.e. one blade edge maintains a constant elevation and the other blade edge maintains a constant blade angle, should use parameters specific to that usage. Only one of the following states will be active at a time. Below are the data values defined for each switch type that may be used in this application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. A toggle button with two states can be used, in which the button is either in the manual or the auto position at all times.

Toggle button usage is as follows:

Manual Position = 0010 Manual button pressed
Auto Position = 0011 Automatic button pressed

2. The momentary rocker switch may be used, where the default is the no button pressed position. The user can press the rocker into the manual position, and when pressure is released, it will return to the no button pressed position. The user may also press the rocker into the auto position, and when pressure is released, it will return to the no button pressed position.

Momentary rocker button usage is as follows:

No Button Pressed = 0000 No button pressed
Manual Button Pressed = 0010 Manual button pressed
Auto Button Pressed = 0011 Automatic button pressed

3. The momentary contact button pair may be used, where the default is no buttons being pressed. The user can press the manual button, and when pressure is released, it will return to the no button pressed position. The user may press the auto button, and when pressure is released, it will return to the no button pressed position. Momentary contact buttons (button pair) usage is as follows:

No Button Pressed = 0000 No button pressed
Manual Button Pressed = 0010 Manual button pressed
Auto Button Pressed = 0011 Automatic button pressed

4. The momentary contact single button may be used, where the default is no button being pressed. The user can press the button, which is the button pressed position, and when pressure is released, it will return to the no button pressed position. The controller receiving this command will keep track of what mode the blade is in, auto or manual. When the button is pressed, the "mode button pressed" state is reported and the receiving controller then changes the current mode to its opposite value (i.e. manual to automatic or vice-versa). Momentary contact button (single button) usage is as follows:

No Button Pressed = 0000 No button pressed
Button Pressed = 0001 Mode button pressed

Data Values and Descriptions:

0000 No button pressed
0001 Mode button pressed
0010 Manual button pressed
0011 Automatic button pressed
1110 Error Indicator
1111 Not Installed
All other values are reserved

Notes:

1. The switch state can be read in two ways. One method uses the direct analog switch input to determine the switch state, while the second method relies on a secondary control to read the analog input, then relay the information on the data link. The parameter is designed to provide the actual switch state to other controls that need the information.
2. Other systems with automated blade controls should be able to use this parameter, since it is a measured switch value.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61453

SPN 3157 *Desired Grade Offset Switch*

This parameter indicates the grade offset switch state the user has set for the land leveling system. The desired grade offset value is the vertical offset measured from a given elevation reference point to the bottom edge of the blade. This parameter is intended for use in systems using only elevation offset to control the blade movement (i.e. elevation). Systems using two independent parameters to control blade position, i.e. one edge maintains a constant elevation and the other blade edge maintains a constant angle, should use parameters specific to that usage. Only one of the following states will be active at a time. Below are the data values defined for each switch type that may be used in this application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. The momentary rocker switch may be used, where the default is the no button pressed position. The user can press the rocker into the increment button pressed position, and when pressure is released, it will return to the no button pressed position. The user may also press the rocker into the decrement button pressed position, and when pressure is released, it will return to the no button pressed position. Momentary rocker button usage is as follows:

No Button Pressed = 0000 No button pressed
Increment Button Pressed = 0001 Increment button pressed
Decrement Button Pressed = 0010 Decrement button pressed

2. The momentary contact button pair may be used, where the default is the no buttons pressed position. The user can press the increment button, and when pressure is released, it will return to the no buttons pressed position. The user may press the decrement button, and when pressure is released, it will return to the no buttons pressed position. Momentary contact button (button pair) usage is as follows:

No Button Pressed = 0000 No button pressed
Increment Button Pressed = 0001 Increment button pressed
Decrement Button Pressed = 0010 Decrement button pressed

Data Values and Descriptions:

0000 No button pressed
0001 Increment button pressed
0010 Decrement button pressed
1110 Error Indicator
1111 Not installed
All other values are reserved

SPN 3158 Blade Auto Mode Command

Allows other controllers to command to the primary control system what they think is the appropriate auto control mode to be engaged in, based on the information they have available to them. When in automatic mode, the blade automatically adjusts its position to the center of the blade to maintain a desired grade offset. Only one of the following states will be active at a time. Below is extended information describing each command. The purpose of this information is to define what command state should be reported based on what auto control mode command is deemed appropriate by the operational specifications of the system.

0000 Auto Allowed - Auto mode permitted as appropriate (auto button was pushed or directly returned from Suspend Auto condition)

0001 Activity Allows Auto - Auto mode permitted only if the primary control system detects operator activity. The control issuing this command does not have sufficient information/reason to absolutely allow Auto mode (state 0000) or not allow Auto mode (state 0100). The control issuing this command is permitting the primary control system to operate in auto mode only if the primary control system detects operator activity, such as direct input to the primary control system. If the primary control system does not detect operator activity, then the control issuing this command is not allowing auto mode. For example, the control issuing this command has detected no operator activity yet it acknowledges that there may be other sources of operator activity that might make auto mode permissible.

0010 Suspend Auto - Auto mode is temporarily not allowed and the control issuing this command wants the primary control system to automatically return to the previous state (Auto or Manual) when the suspend auto condition is removed.

0011 Service Mode - Auto mode is permitted only for special services such as calibrations.

0100 Auto Not Allowed - Auto mode is not allowed under any condition

Data Values and Descriptions:

0000 Auto Allowed

0001 Activity Allows Auto - must detect operator before auto allowed

0010 Suspend Auto - temporarily suspend auto mode

0011 Service Mode - auto allowed only during service modes

0100 Auto Not Allowed

1110 Error Indicator

1111 Not Supported

All other values are reserved

Note:

The control issuing this command is aware that it does not have access to all information that the primary controller of the Land Leveling System attachment has access to. Therefore, it commands the Land Leveling system to activate a auto blade mode based on the input it has access to. In some cases, like in the "Activity Allows Auto" situation, the control knows the Land Leveling system has access to an additional display (which has switches and several buttons) which may help determine if an operator is present. On the other hand, the control may also have information the primary controller of the Land Leveling System does not have access to, like the parking brake status.

Security code for the farebox, numerical only.

Note: 0 = Farebox is in reporting status
1 - 65535 = security code

Data Length: 2 bytes
Resolution: 1 count/bit, 0 offset
Data Range: 0 to 65,535 counts Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64956

SPN 3165 *Fare Validity*

Agency defined value indicating validity of this fare

Data Length: 4 bits
Resolution: 1 count/bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64955

SPN 3166 *Pass Category*

Agency defined value indicating the category of the passenger associated with this fare

Data Length: 4 bits
Resolution: 1 count/bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64955

SPN 3167 *Initial Fare Agency*

Identifies where the initial fare is paid

Note: The definition of the agency numbering plan shall be agreed by the operating agency and the farebox manufacturer. The value of 0 is reserved, the usable range is 1 to 31.

Data Length: 5 bits
Resolution: 1 count/bit, 0 offset
Data Range: 0 to 31 Operational Range: 1 to 31
Type: Measured
Supporting information:
PGN reference: 64955

SPN 3168 *Transfer Sold*

Indicates that a transfer was sold or issued on this transaction including its type and/or restrictions. The final definitions of the transfer issued information shall be agreed by the operating agency and the farebox manufacturer.

Note: A non-zero value indicates that a transfer was sold or issued. The value of zero is reserved to indicate that no transfer has been sold or issued.

Data Length: 1 byte

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3169 *Route Number*

The route number issuing the transfer.

Data Length: 12 bits

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 4095

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3170 *Transaction Type*

Enumerated value representing the type of transaction completed

0000 = Cash

0001 = Token

0010 = Ticket

0011 = Pass

0100 = Card

0101 = Permit

0110 = Transfer

0111 = Free

1000-1011 = Reserved for assignment

1100-1111 = Agency defined

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3171 *Passenger Type*

Enumerated value representing the type/class of passenger, as defined by the agency.

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3172 *Type of Service*

The type of service provided

000 = Local service

001 = Express service

010-111 = Agency defined

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3173 *Transfer Type*

The kind of transfer used

00000 = North

00001 = South

00010 = East

00011 = West

00100 = In

00101 = Out

00110-11111 = Agency defined

Data Length: 5 bits

Resolution: 32 states/5 bit, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3174 Trip Direction

The general direction of travel for this trip.

0000 = North
0001 = South
0010 = East
0011 = West
0100 = In
0101 = Out
0110-1111 = Agency defined

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64956

SPN 3175 Fare Presets

Fare Presets

00000000 to 00001111 = Agency defined
00010000 to 11111111 = Reserved for assignment

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64956

SPN 3176 Type of Fare

Type of Fare

0000 = Cash/No detail
0001 = Token A
0010 = Token B
0011 = Ticket A
0100 = Ticket B
0101 = Pass A
0110 = Pass B
0111-1010 = Reserved for assignment
1011-1111 = Agency defined

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3177 *Payment Details*

Payment details.

0000 = Not an upgrade
0001 = Cash
0010 = Token
0011 = Ticket
0100 = Pass
0101 = Card
0110-1010 = Reserved for assignment
1011-1111 = Agency defined

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64955

SPN 3178 *Farebox Service Status*

Indicates if the farebox is in or out of service.

00 = Farebox out of service
01 = Farebox in service
10 = Error Condition
11 = Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64956

SPN 3179 *Farebox Emergency Status*

Indicates if a farebox emergency condition exists.

00 = Non-emergency condition
01 = Emergency condition
10 = Error Condition
11 = Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64954

SPN 3180 Trip Status

Trip Status

000 = Undefined
001 = Trip start
010 = Trip end
011 = Undefined
100 = Undefined
101 = Layover start
110 = Layover end
111 = Undefined

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64956

SPN 3181 Farebox Alarm Identifier

Indicates the nature of the farebox alarm condition.

0000000 = Voltage dropout
0000001 = Voltage restored
0000010 = Probe started
0000011 = Probe completed
0000100 = Cashbox removed
0000101 = Cashbox restored
0000110 = Cashbox door timeout
0000111 = Cashbox opened in service, considered an alarm condition
0001000 = Insufficient fare accepted
0001001 = Coinbox 75% full
0001010 = Coinbox full
0001011 = Currency box 75% full
0001100 = Currency box less than 75% full
0001101 = Currency box full
0001110 = Card/pass box 75% full
0001111 = Card/pass box less than 75% full
0010000 = Card/pass box full
0010001 = Coin de-jam operated
0010010 = Farebox set in manual bypass
0010011 = Farebox reset to automatic mode
0010100 = Pass/transfer jam
0010101 = Pass/transfer jam cleared
0010110 = Paper currency jam
0010111 = Paper currency jam cleared
0011000 = Maintenance access in service, considered an alarm condition
0011001 = Maintenance access out of service
0011010-1100000 = Reserved - to be assigned
1100001-1111111 = Agency defined

Data Length: 7 bits

Resolution: 128 states/7 bit, 0 offset

Data Range: 0 to 127

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64954

SPN 3188 XBR Message Checksum

The XBR message checksum is used to verify the signal path from the demanding device to the brake controller on electronic brake systems. The support of this parameter is mandatory.

The 4 bit checksum is the sum of the high nibble and the low nibble of the sum of the identifier, the first 7 data bytes and the 4 bit message counter. It is calculated as follows:

Checksum = (Byte1 + Byte2 + Byte3 + Byte4 + Byte5 + Byte6 + Byte7 + message counter&0x0F + message ID low byte + message ID mid low byte + message ID mid high byte + message ID high byte)
Checksum = ((Checksum >> 4) + Checksum) & 0x0F

Note: A failure in the communication sets the XBR system state:

- to '01' for failed XBR 'priority 01, 10 or 11' messages
- to '10' for failed XBR 'priority 00' messages.

Data Length: 4 bits

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 1024

SPN 3189 XBR Message Counter

The XBR message counter is to verify the signal path from the demanding device to the brake controller on electronic brake systems.. The support of this parameter is mandatory.

Note: The initial value of the 4 bit message counter for the first message during a driving cycle is arbitrary. In every following message the counter is incremented by 1 (0 follows 15).

Data Length: 4 bits

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 1024

SPN 3190 *Tire Location*

Identifies which tire is associated with the parametric data in this PGN.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64953

SPN 3191 *Reference Tire Pressure*

Reference value of the tire pressure as basis for the tire pressure monitoring

Data Length: 1 byte

Resolution: 8 kPa/bit, 0 offset

Data Range: 0 to 2,000 kPa

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64953

SPN 3192 *Tire Location*

Identifies which tire is associated with the parametric data in this PGN.

The low order 4 bits represent a position number, counting left to right when facing in the direction of normal vehicle travel (forward).

The high order 4 bits represent a position number, counting front to back on the vehicle.

The value 0xFF indicates not available.

It is recommended that output devices add 1 to the position number (range 1 to 15, not 0 to 14) for use by drivers and service technicians.

Examples: Tire pressure for location 0x00 would be left front tire.

Tire pressure for location 0x23 would be right outside rear rear on a 3-axle tractor with dual axle per side (3rd axle, 4th tire).

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 44544

SPN 3193 *Reference Tire Pressure Setting*

Reference value of the tire pressure setting as basis for the tire pressure monitoring

Data Length: 1 byte

Resolution: 8 kPa/bit, 0 offset

Data Range: 0 to 2,000 kPa

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 44544

SPN 3215 (R) *Prohibit air suspension control*

This parameter is an external request to the air suspension control system to prohibit all air suspension control. If the request is accepted, response intended to be sent in ASC1 (additional status requested in ASC1), there will be no control either for height changes or axle load distribution changes, i.e. hold current pressures in all suspension devices.

00 No request

01 Request prohibit air suspension control

Type: Status

Supporting information:

PGN reference: 53760

SPN 3216 (R) Aftertreatment 1 Intake NOx

The amount of combined NO and NO₂ in the exhaust entering the aftertreatment system measured by a NO_x sensor at the aftertreatment intake, represented in NO_x molecule parts per million non-NO_x molecules in exhaust bank 1.

Data Length: 2 bytes

Resolution: 0.05 ppm/bit, -200 ppm offset

Data Range: -200 to 3012.75 ppm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61454

SPN 3217 (R) Aftertreatment 1 Intake %O₂

The actual oxidation factor (%O₂) of the gas within the exhaust stream. For positive values, the parameter represents the percent oxygen in excess of the amount required for stoichiometric combustion. For negative values, the parameter is proportional to the amount of oxygen being pumped by the sensor. This value is measured by a sensor at the aftertreatment intake in exhaust bank 1.

Data Length: 2 bytes

Resolution: 0.000514 %/bit, -12 % offset

Data Range: -12% to 21%

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61454

SPN 3218 (R) Aftertreatment 1 Intake Gas Sensor Power In Range

Indicates that the power supplied to the aftertreatment intake gas sensor, either NO_x or O₂, is within the manufacturer's specification in exhaust bank 1.

00 - Not in range

01 - In range

10 - Error

11 - Not available

Data Length: 2 bits

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61454

SPN 3219 (R) Aftertreatment 1 Intake Gas Sensor at Temperature

Indicates that the heater element of the aftertreatment intake gas sensor, either NO_x or O₂, is within the manufacturer's specified range for accurate measurements in exhaust bank 1.

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61454

SPN 3220 (R) Aftertreatment 1 Intake NOx Reading Stable

Indicates that the NOx reading of the aftertreatment intake NOx sensor is stable as determined by the manufacturer's control software in exhaust bank 1.

00 - Not stable
01 - Stable
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61454

SPN 3221 (R) Aftertreatment 1 Intake Wide-Range % O2 Reading Stable

Indicates that the %O2 reading of the aftertreatment intake gas sensor, either NOx or O2, is stable as determined by the manufacturer's control software in exhaust bank 1.

00 - Not stable
01 - Stable
10 - Error
11 - Not available

Data Length: 2 bits

PGN reference: 64948

SPN 3243 (R) Aftertreatment 1 Exhaust Gas Temperature 1 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 1 sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64948

SPN 3244 (R) Aftertreatment 1 Particulate Trap Intake Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap intake gas temperature sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64948

SPN 3245 (R) Aftertreatment 1 Exhaust Gas Temperature 3

The reading from the exhaust gas temperature sensor located farthest downstream in the aftertreatment system in exhaust bank 1.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64947

SPN 3246 (R) Aftertreatment 1 Particulate Trap Outlet Gas Temperature

Temperature of engine combustion byproducts leaving the particulate trap exhaust in exhaust bank 1.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64947

SPN 3247 (R) Aftertreatment 1 Exhaust Gas Temperature 3 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 3 sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64947

SPN 3248 (R) Aftertreatment 1 Particulate Trap Outlet Exhaust Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap outlet gas temperature sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64947

SPN 3249 (R) Aftertreatment 1 Exhaust Gas Temperature 2

The reading from the exhaust gas temperature sensor located midstream of the other two temperature sensors in the aftertreatment system in exhaust bank 1.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64946

SPN 3250 (R) Aftertreatment 1 Particulate Trap Intermediate Gas Temperature

Temperature of engine combustion byproducts at a mid-point in the particulate trap in exhaust bank 1.

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64946

SPN 3251 (R) Aftertreatment 1 Particulate Trap Differential Pressure

Exhaust differential pressure measured between the intake and exhaust of a particulate trap in exhaust bank 1.

Data Length: 2 bytes
Resolution: 0.1 kPa/bit, 0 offset
Data Range: 0 to 6,425.5 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64946

SPN 3252 (R) Aftertreatment 1 Exhaust Gas Temperature 2 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 2 sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64946

SPN 3253 (R) Aftertreatment 1 Particulate Trap Delta Pressure Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap differential pressure sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64946

SPN 3254 (R) Aftertreatment 1 Particulate Trap Intermediate Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap intermediate gas temperature sensor by the manufacturer's sensor control software in exhaust bank 1. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64946

SPN 3255 (R) Aftertreatment 2 Intake NOx

The amount of combined NO and NO₂ in the exhaust entering the aftertreatment system measured by a NO_x sensor at the aftertreatment intake, represented in NO_x molecule parts per million non-NO_x molecules in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes
Resolution: 0.05 ppm/bit, -200 ppm offset
Data Range: -200 to 3012.75 ppm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61456

SPN 3256 (R) Aftertreatment 2 Intake %O2

The actual oxidation factor (%O2) of the gas within the exhaust stream. For positive values, the parameter represents the percent oxygen in excess of the amount required for stoichiometric combustion. For negative values, the parameter is proportional to the amount of oxygen being pumped by the sensor. This value is measured by a sensor at the aftertreatment intake in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.000514 %/bit, -12 % offset

Data Range: -12% to 21%

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61456

SPN 3257 (R) Aftertreatment 2 Intake Gas Sensor Power In Range

Indicates that the power supplied to the aftertreatment intake gas sensor, either NOx or O2, is within the manufacturer's specification in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

00 - Not in range

01 - In range

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3258 (R) Aftertreatment 2 Intake Gas Sensor at Temperature

Indicates that the heater element of the aftertreatment intake gas sensor, either NOx or O2, is within the manufacturer's specified range for accurate measurements in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

00 - Not in range

01 - In range

10 - Error

11 - Not available

Data Length: 2 bits

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3259 (R) Aftertreatment 2 Intake NOx Reading Stable

Indicates that the NOx reading of the aftertreatment intake NOx sensor is stable as determined by the manufacturer's control software in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

00 - Not stable
01 - Stable
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3260 (R) Aftertreatment 2 Intake Wide-Range % O2 Reading Stable

Indicates that the %O2 reading of the aftertreatment intake gas sensor, either NOx or O2, is stable as determined by the manufacturer's control software in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

00 - Not stable
01 - Stable
10 - Error
11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3261 (R) Aftertreatment 2 Intake Gas Sensor Heater Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the heater of the intake exhaust gas sensor, either NOx or O2, by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3262 (R) Aftertreatment 2 Intake Gas Sensor Heater Control

Indicates the heater status in the warm-up process. Upon receiving a power-up command, the gas sensor ramps up according to a manufacturer defined profile. The Preheat 1, Preheat 2, and Automatic messages are regions within this profile in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

00 - Automatic
01 - Preheat 2
10 - Preheat 1
11 - Heater off

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3263 (R) Aftertreatment 2 Intake NOx Sensor Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the aftertreatment intake NOx sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3264 (R) Aftertreatment 2 Intake Oxygen Sensor Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the aftertreatment intake oxygen sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61456

SPN 3265 (R) Aftertreatment 2 Outlet NOx

The amount of combined NO and NO2 in the exhaust entering the aftertreatment system measured by a NOx sensor at the aftertreatment outlet, represented in NOx molecule parts per million non-NOx molecules in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.05 ppm/bit, -200 ppm offset

Data Range: -200 to 3012.75 ppm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61457

SPN 3266 (R) Aftertreatment 2 Outlet %O2

The actual oxidation factor (%O2) of the gas within the exhaust stream. For positive values, the parameter represents the percent oxygen in excess of the amount required for stoichiometric combustion. For negative values, the parameter is proportional to the amount of oxygen being pumped by the sensor. This value is measured by a sensor at the aftertreatment outlet in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.000514 %/bit, -12 % offset

Data Range: -12% to 21% Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61457

SPN 3267 (R) Aftertreatment 2 Outlet Gas Sensor Power In Range

Indicates that the power supplied to the aftertreatment outlet gas sensor, either NOx or O2, is within the manufacturer's specification in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

00 - Not in range

01 - In range

10 - Error

11 - Not available

Data Length: 2 bits

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61457

SPN 3271 (R) Aftertreatment 2 Outlet Gas Sensor Heater Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the heater of the outlet exhaust gas sensor, either NOx or O2, by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61457

SPN 3272 (R) Aftertreatment 2 Outlet Gas Sensor Heater Control

Indicates the heater status in the warm-up process. Upon receiving a power-up command, the gas sensor ramps up according to a manufacturer defined profile. The Preheat 1, Preheat 2, and Automatic messages are regions within this profile in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

00 - Automatic
01 - Preheat 2
10 - Preheat 1
11 - Heater off

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61457

SPN 3273 (R) Aftertreatment 2 Outlet NOx Sensor Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the aftertreatment outlet NOx sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61457

SPN 3274 (R) Aftertreatment 2 Outlet Oxygen Sensor Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the aftertreatment outlet oxygen sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61457

SPN 3275 (R) Aftertreatment 2 Exhaust Gas Temperature 1

The reading from the exhaust gas temperature sensor located farthest upstream in the aftertreatment system in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64945

SPN 3276 (R) Aftertreatment 2 Particulate Trap Intake Gas Temperature

Temperature of engine combustion byproducts entering the particulate trap in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64945

SPN 3277 (R) Aftertreatment 2 Exhaust Gas Temperature 1 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 1 sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64945

SPN 3278 (R) Aftertreatment 2 Particulate Trap Intake Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap intake gas temperature sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64945

SPN 3279 (R) Aftertreatment 2 Exhaust Gas Temperature 3

The reading from the exhaust gas temperature sensor located farthest downstream in the aftertreatment system in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64944

SPN 3280 (R) Aftertreatment 2 Particulate Trap Outlet Gas Temperature

Temperature of engine combustion byproducts leaving the particulate trap exhaust in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64944

SPN 3281 (R) Aftertreatment 2 Exhaust Gas Temperature 3 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 3 sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64944

SPN 3282 (R) Aftertreatment 2 Particulate Trap Exhaust Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap outlet gas temperature sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64944

SPN 3283 (R) Aftertreatment 2 Exhaust Gas Temperature 2

The reading from the exhaust gas temperature sensor located midstream of the other two temperature sensors in the aftertreatment system in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 2 bytes

Resolution: 0.03125 deg C/bit, -273 deg C offset

Data Range: -273 to 1735 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64943

SPN 3284 (R) Aftertreatment 2 Particulate Trap Intermediate Gas Temperature

Temperature of engine combustion byproducts at a mid-point in the particulate trap in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 2 bytes
Resolution: 0.03125 deg C/bit, -273 deg C offset
Data Range: -273 to 1735 deg C Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64943

SPN 3285 (R) Aftertreatment 2 Particulate Trap Differential Pressure

Exhaust differential pressure measured between the intake and exhaust of a particulate trap in exhaust bank 2. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 2 bytes
Resolution: 0.1 kPa/bit, 0 offset
Data Range: 0 to 6,425.5 kPa Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64943

SPN 3286 (R) Aftertreatment 2 Exhaust Gas Temperature 2 Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the exhaust gas temperature 2 sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64943

SPN 3287 (R) Aftertreatment 2 Particulate Trap Delta Pressure Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap differential pressure sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs AT11, ATO1, EEC3, AT12, ATO2 and ATM1.)

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64943

SPN 3288 (R) Aftertreatment 2 Particulate Trap Intermediate Gas Temperature Preliminary FMI

Used to identify the applicable J1939-73 FMI detected in the particulate trap intermediate gas temperature sensor by the manufacturer's sensor control software in exhaust bank 2. When there is no failure FMI 31 is sent. In the case of multiple failures the most severe is communicated. (For a single exhaust bank system, refer to parameters in PGNs ATI1, ATO1, EEC3, ATI2, ATO2 and ATM1.)

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64943

SPN 3289 Transmission Requested Gear Feedback

Feedback of the SPN 525 Transmission Requested Gear input as received from the shift selector, ABS or engine via PGN 256, Transmission Control #1 (TC1). Scaling, values and parameter specific indicators are identical to those listed for SPN 525 Transmission Requested Gear.

This feedback from the transmission allows shift selectors and other TC1 input devices to verify that their Transmission Requested Gear command has been properly received by the transmission. (This parameter is not intended for driver display purposes).

Data Length: 1 byte

Resolution: 1 gear value/bit, -125 offset

Data Range: -125 to 125

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65098

SPN 3307 (R) Fifth Wheel Error Status

Fifth wheel error state which conveys information when coupling status is incomplete or bad.

0000	0 - Improper Couple
0001	1 - Locks Closed / No Kingpin at Startup
0010	2 - Kingpin / Locks Open at Startup
0011	3 - Not Used
0100	4 - Not Used
0101	5 - Coupling Sequence Error
0110	6 - Coupling Sequence Error / Kingpin
0111	7 - Coupling Timing Error
1000	8 - Kingpin Missing More Than 5 Seconds
1001	9 - Kingpin / Lock Open (Handle Pulled)
1010	10 - Not Used
1011	11 - Not Used
1100	12 - Not Used

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64942

SPN 3308 (R) Fifth Wheel Vertical Force

The amount of load being applied to the fifth wheel by the trailer. Zero load is indicated without a trailer.

Data Length: 2 bytes

Resolution: 5 N/bit, 0 offset

Data Range: 0 to 321,275 N

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61458

SPN 3309 (R) Fifth Wheel Drawbar Force

Fifth wheel drawbar force, with the trailer held stationary a positive force is generated by the vehicle pulling forward.

Data Length: 2 bytes

Resolution: 10 N/bit, -320,000 N offset

Data Range: -320,000 to 322,550 N

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61458

SPN 3310 (R) Fifth Wheel Roll Moment

Fifth wheel roll moment force - if the moment is positive, the trailer is rolling clockwise relative to the normal vehicle forward motion.

Data Length: 2 bytes

Resolution: 10 N/bit, -320,000 N offset

Data Range: -320,000 to 322,550 N

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61458

SPN 3311 (R) Fifth Wheel Slider Position

Slider position measurement. Zero equals fully back position, that is, the farthest to the rear of the vehicle.

Data Length: 1 byte

Resolution: 10 mm/bit, 0 offset

Data Range: 0 to 2500 mm (0 to 2.500 m)

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64942

SPN 3312 (R) Fifth Wheel Lock Ready to Couple Indicator

Indicates to the vehicle operator that the fifth wheel lock is open and ready to couple.

- 00 Lock not open, not ready to couple
- 01 Lock open, ready to couple
- 10 Error
- 11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64942

SPN 3313 (R) Fifth Wheel Lock Couple Status Indicator

Indicates results of coupling operation to the vehicle operator. For incomplete couples further information can be obtained from the fifth wheel error status SPN.

- 00 Incomplete or bad couple, truck should not be moved
- 01 Successful couple detected
- 10 Error
- 11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64942

SPN 3314 (R) Fifth Wheel Release Control

Operator input used to release the fifth wheel. Fifth Wheel Release Control Security Lockout and other conditions must be properly enabled before this will function.

- 00 Coupler Locked
- 01 Coupler Unlocked, trailer can be unhitched or hitched
- 10 Error
- 11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64980

SPN 3315 (R) Fifth Wheel Release Control Security Lockout

Operator's fifth wheel release control interlock. This operator input must be enabled prior to activating the fifth wheel release control (SPN 3314).

00 Fifth wheel release Disabled
01 Fifth wheel release Enabled
10 Error
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64980

SPN 3316 (R) Fifth Wheel Slider Lock Indicator

Indicates to vehicle operator that the fifth wheel slider is in position and locked.

00 Not Locked
01 Locked
10 Error
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64942

SPN 3317 (R) Fifth Wheel Roll Warning Indicator

Indicates to the vehicle operator that the roll moment has exceeded a preset limit.

00 Limit not exceeded
01 Limit exceeded
10 error
11 Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61458

SPN 3318 (R) Pitch Angle

The angle between the vehicle x-axis and the ground plane.

Data Length: 2 bytes

Resolution: 0.002 deg/bit, -64 offset

Data Range: -64 to 64.51 deg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61459

SPN 3319 (R) Roll Angle

The angle between the vehicle y-axis and the ground plane.

Data Length: 2 bytes

Resolution: 0.002 deg/bit, -64 offset

Data Range: -64 to 64.51 deg Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61459

SPN 3322 (R) Pitch Rate

Pitch rate is the rate-of-change of the pitch angle over time, where the pitch angle vector is in the direction of travel of the vehicle.

Data Length: 2 bytes

Resolution: 0.002 deg/sec per bit, -64 deg/sec offset

Data Range: -64 to 64.51 deg/sec Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61459

SPN 3323 (R) Pitch Angle Figure of Merit

Figure of merit for pitch angle measurement.

Bit 2 Bit 1

0 0 Pitch angle fully functional. Data is within sensor specification.

0 1 Pitch angle degraded. Data is suspect due to environmental conditions.

1 0 Error

1 1 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61459

SPN 3324 (R) Roll Angle Figure of Merit

Figure of merit for roll angle measurement.

Bit 4 Bit 3

0	0	Roll angle fully functional. Data is within sensor specification.
0	1	Roll angle degraded. Data is suspect due to environmental conditions.
1	0	Error
1	1	Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61459

SPN 3325 (R) Pitch Rate Figure of Merit

Figure of merit for the pitch rate measurement.

Bit 6 Bit 5

0	0	Pitch rate fully functional. Data is within sensor specification.
0	1	Pitch rate degraded. Data is suspect due to environmental conditions.
1	0	Error
1	1	Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61459

SPN 3326 (R) Pitch and Roll Compensated

Compensated mode for the pitch and roll measurements. Compensation is the use of multiple sensors together to enhance the output of pitch and roll measurements.

Bit 8 Bit 7

0	0	Compensation Off
0	1	Compensation On
1	0	Error
1	1	Not Available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61459

SPN 3327 (R) Roll and Pitch Measurement Latency

The estimated measurement latency of the measurement. NOTE: This is only the sensor latency and does not include any additional latencies that might exist because of the CAN Bus or overall system implementation. Latency is the time from sensor readings to the queuing of the message data for CAN transmission.

Data Length: 1 byte
Resolution: 0.5 ms/bit, 0 offset
Data Range: 0 to 125 ms Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61459

SPN 3331 (R) Blade Rotation Angle

The blade rotation angle measurement around the yaw (z-axis).

Data Length: 2 bytes
Resolution: 1/128 deg/bit, -200 deg offset
Data Range: -200 to 301.99 deg Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 61460

SPN 3332 (R) Blade Rotation Angle Figure of Merit

Figure of merit for blade rotation measurement.

Bits

00 Blade Rotation Angle fully functional. Data is within sensor specification.

01 Blade Rotation Angle degraded. Data is suspect due to environmental conditions.

10 Blade Rotation Angle failed. Roll sensor failed to operate correctly.

11 Blade Rotation Angle not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 61460

SPN 3334 (R) Left Blade Control Mode Operator Control

This parameter indicates the left blade control mode operator control state the user has set for the land leveling system. The operator control value directly relates to the current operator control state correlating to the left edge of the blade. The purpose of this parameter is to set the control mode (auto/manual) for the left side of the blade. For this system, the left and right side of the blade can be adjusted independently of each other to either change the elevation from a given reference point or the blade angle (also known as blade tilt)/cross slope depending on the function requested by the operator.

This parameter is intended for use in systems using two parameters (right/left) to control the blade as described above. Systems using only one parameter to control blade position, i.e. elevation, should use the Blade Control Mode Switch parameter. Only one of the following states will be active at a time. In the example below, data values are defined for each switch type that may be used in an application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. A toggle button with two states can be used, in which the button is either in the manual or the auto position at all times.

Toggle button usage is as follows:

Manual Button Pressed = 0010 Manual Operator Control Request
Automatic Button Pressed = 0011 Automatic Operator Control Request
Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

2. The momentary rocker switch may be used, where the default is the no button pressed position. The user can press the rocker into the manual position, and when pressure is released, it will return to the no button pressed position. The user may also press the rocker into the auto position, and when pressure is released, it will return to the no button pressed position.

Momentary rocker button usage is as follows:

No button pressed = 0000 No change
Manual Button Pressed = 0010 Manual Operator Control Request
Automatic Button Pressed = 0011 Automatic Operator Control Request
Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

3. The momentary contact button pair may be used, where the default is no buttons being pressed. The user can press the manual button, and when pressure is released, it will return to the no button pressed position. The user may press the auto button, and when pressure is released, it will return to the no button pressed position.

Momentary contact buttons (button pair) usage is as follows:

No button pressed = 0000 No change
Manual Button Pressed = 0010 Manual Operator Control Request
Automatic Button Pressed = 0011 Automatic Operator Control Request
Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

4. The momentary contact single button may be used, where the default is no button being pressed. The user can press the button, which is the button pressed position, and when pressure is released, it will return to the no button pressed position. The controller receiving this command will keep track of what mode the blade is in, auto or manual. If the blade is in manual mode to begin with, one press of the button will change to mode to auto. If the button is pressed again, the blade will be put into manual mode.

Momentary contact button (single button) usage is as follows:

No button pressed = 0000 No change
Mode Button Pressed = 0001 Momentary Operator Control Request

Data Values and Descriptions:

0000 No Change
0001 Momentary Operator Control Request
0010 Manual Operator Control Request
0011 Automatic Operator Control Request
1100 - 1101 Reserved
1110 Error Indicator
1111 Not Installed

Notes:

1. The operator control state can be read in two ways. One method uses the direct operator control input to determine the operator control state, while the second method relies on a secondary control to read the operator control input, then relay the information on the data link. The parameter is designed to provide the actual operator control state to other controls that need the information.
2. Other systems with automated blade controls should be able to use this parameter, since it is an actual operator control value

Data Length: 4 bits

Resolution: 16 states/4 bit, 0 offset

Data Range: 0 to 15

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61453

SPN 3335 (R) Right Blade Control Mode Operator Control

This parameter indicates the right blade control mode operator control state the user has set for the land leveling system. The operator control value directly relates to the current operator control state correlating to the left edge of the blade. The purpose of this parameter is to set the control mode (auto/manual) for the left side of the blade. For this system, the left and right side of the blade can be adjusted independently of each other to either change the elevation from a given reference point or the blade angle (also known as blade tilt)/cross slope depending on the function requested by the operator.

This parameter is intended for use in systems using two parameters(right/left) to control the blade as described above. Systems using only one parameter to control blade position, i.e. elevation, should use the Blade Control Mode Switch parameter. Only one of the following states will be active at a time. In the example below, data values are defined for each switch type that may be used in an application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. A toggle button with two states can be used, in which the button is either in the manual or the auto position at all times.

Toggle button usage is as follows:

Manual Button Pressed = 0010 Manual Operator Control Request

Automatic Button Pressed = 0011 Automatic Operator Control Request

Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

2. The momentary rocker switch may be used, where the default is the no button pressed position. The user can press the rocker into the manual position, and when pressure is released, it will return to the no button pressed position. The user may also press the rocker into the auto position, and when pressure is released, it will return to the no button pressed position.

Momentary rocker button usage is as follows:

No button pressed = 0000 No change

Manual Button Pressed = 0010 Manual Operator Control Request

Automatic Button Pressed = 0011 Automatic Operator Control Request

Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

3. The momentary contact button pair may be used, where the default is no buttons being pressed. The user can press the manual button, and when pressure is released, it will return to the no button pressed position. The user may press the auto button, and when pressure is released, it will return to the no button pressed position.

Momentary contact buttons (button pair) usage is as follows:

No button pressed = 0000 No change

Manual Button Pressed = 0010 Manual Operator Control Request

Automatic Button Pressed = 0011 Automatic Operator Control Request

Invalid Switch Input(ex. auto and manual read/pressed simultaneously) = 1110 Error Indicator

4. The momentary contact single button may be used, where the default is no button being pressed. The user can press the button, which is the button pressed position, and when pressure is released, it will return to the no button pressed position. The controller receiving this command will keep track of what mode the blade is in, auto or manual. If the blade is in manual mode to begin with, one press of the button will change to mode to auto. If the button is pressed again, the blade will be put into manual mode.

Momentary contact button (single button) usage is as follows:

No button pressed	= 0000	No change
Mode Button Pressed	= 0001	Momentary Operator Control Request

Data Values and Descriptions:

0000	No Change
0001	Momentary Operator Control Request
0010	Manual Operator Control Request
0011	Automatic Operator Control Request
1110	Error Indicator
1111	Not Installed

SPN 3336 (R) Left Desired Blade Offset Operator Control

This parameter indicates the left blade offset operator control state the user has set for the land leveling system. The left desired blade offset value is the offset measured from a given reference point to the bottom left edge of the blade. This parameter will only be used when the control mode for land leveling system has been set to auto. The purpose of this parameter is to adjust the elevation from a given reference point or the blade angle(also known as blade tilt)/cross slope depending on the function being requested by the operator for the left side of the blade.

This parameter is intended for use in systems using two parameters(left/right) to control the blade as described above. Systems using only one parameter to control blade position, i.e. elevation, should use the Desired Blade Offset Switch parameter. Only one of the following states will be active at a time.

In the example below, data values are defined for each switch type that may be used in an application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. The momentary rocker switch may be used, where the default is the neutral position with no buttons pressed. The user can press the rocker into the increment button pressed position, and when pressure is released, it will return to the neutral position. The user may also press the rocker into the decrement button pressed position, and when pressure is released, it will return to the neutral position. Momentary rocker button usage is as follows:

Neutral position = 0000 No Operator Control Request
Increment Button Pressed = 0001 Increment Operator Control Request
Decrement Button Pressed = 0010 Decrement Operator Control Request
Invalid Switch Input(ex. inc./dec. values read simultaneously) = 1110 Error Indicator

2. The momentary contact button pair may be used, where the default is the neutral position with no buttons pressed. The user can press the increment button, and when pressure is released, it will return to the neutral position. The user may press the decrement button, and when pressure is released, it will return to the neutral position. Momentary contact button (button pair) usage is as follows:

No Button Pressed = 0000 No Operator Control Request
Increment Button Pressed = 0001 Increment Operator Control Request
Decrement Button Pressed = 0010 Decrement Operator Control Request
Invalid Switch Input(ex. inc./dec. values read simultaneously) = 1110 Error Indicator

Data Values and Descriptions:

0000 No Operator Control Request
0001 Increment Operator Control Request
0010 Decrement Operator Control Request
0011 - 1101 Reserved
1110 Error Indicator
1111 Not installed

Notes:

1. The operator control state can be read in two ways. One method uses the direct operator control input to determine the operator control state, while the second method relies on a secondary control to read the operator control input, then relay the information on the data link. The parameter is designed to provide the actual operator control state to other controls that need the information.
2. Other systems with automated blade controls should be able to use this parameter, since it is an actual operator control value.

Supporting information:

PGN reference: 61453

SPN 3337 (R) Right Desired Blade Offset Operator Control

This parameter indicates the right blade offset operator control state the user has set for the land leveling system. The right desired blade offset value is the offset measured from a given reference point to the bottom right edge of the blade. This parameter will only be used when the control mode for land leveling system has been set to auto. The purpose of this parameter is to adjust the elevation from a given reference point or the blade angle(also known as blade tilt)/cross slope depending on the function being requested by the operator for the left side of the blade.

This parameter is intended for use in systems using two parameters(left/right) to control the blade as described above. Systems using only one parameter to control blade position, i.e. elevation, should use the Desired Blade Offset Switch parameter. Only one of the following states will be active at a time.

In the example below, data values are defined for each switch type that may be used in an application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. The momentary rocker switch may be used, where the default is the neutral position with no buttons pressed. The user can press the rocker into the increment button pressed position, and when pressure is released, it will return to the neutral position. The user may also press the rocker into the decrement button pressed position, and when pressure is released, it will return to the neutral position. Momentary rocker button usage is as follows:

Neutral position = 0000 No Operator Control Request
Increment Button Pressed = 0001 Increment Operator Control Request
Decrement Button Pressed = 0010 Decrement Operator Control Request
Invalid Switch Input(ex. inc./dec. values read simultaneously) = 1110 Error Indicator

2. The momentary contact button pair may be used, where the default is the neutral position with no buttons pressed. The user can press the increment button, and when pressure is released, it will return to the neutral position. The user may press the decrement button, and when pressure is released, it will return to the neutral position. Momentary contact button (button pair) usage is as follows:

No Button Pressed = 0000 No Operator Control Request
Increment Button Pressed = 0001 Increment Operator Control Request
Decrement Button Pressed = 0010 Decrement Operator Control Request
Invalid Switch Input(ex. inc./dec. values read simultaneously) = 1110 Error Indicator

SPN 3338 (R) Side-shift Blade Control Mode Operator Control

This parameter indicates the side-shift offset operator control state the user has set for the land leveling system. When an implement moves in a side-shift direction, it moves from side to side, usually along its longitudinal axis. The desired side-shift offset value is the offset measured from a given vertical reference point to the center of the blade.

Only one of the following states will be active at a time. In the example below, the data values are defined for each switch type that may be used in an application. The purpose of the following switch information is to define what data should be reported based on what type of switch is used.

1. The momentary rocker switch may be used, where the default is the neutral position with no buttons pressed. The user can press the rocker into the increment button pressed position, and when pressure is released, it will return to the neutral position. The user may also press the rocker into the decrement button pressed position, and when pressure is released, it will return to the neutral position. Momentary rocker button usage is as follows:

- Neutral position = 0000 No Operator Control Request
- Increment Button Pressed = 0001 Increment Operator Control Request
- Decrement Button Pressed = 0010 Decrement Operator Control Request

2. The momentary contact button pair may be used, where the default is the neutral position with no buttons pressed. The user can press the increment button, and when pressure is released, it will return to the neutral position. The user may press the decrement button, and when pressure is released, it will return to the neutral position. Momentary contact button (button pair) usage is as follows:

- No Button Pressed = 0000 No Operator Control Request
- Increment Button Pressed = 0001 Increment Operator Control Request
- Decrement Button Pressed = 0010 Decrement Operator Control Request

Type: Measured

Supporting information:

PGN reference: 64938

SPN 3343 (R) Engine Centrifugal Oil Filter speed

The speed of a rotating (centrifugal) engine oil filter.

Data Length: 2 bytes

Resolution: 4 rpm/bit, 0 offset

Data Range: 0 to 257,020 rpm

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64938

SPN 3344 (R) Support Variable Rate TSC1 Message

This parameter indicates which TSC1 transmission rates are supported by the engine ECU in addition to the required 10ms transmission rate for temporary powertrain control purposes.

Bit Position	Transmission Rate
1	1000 ms transmission rate
2	750 ms transmission rate
3	500 ms transmission rate
4	250 ms transmission rate
5	100 ms transmission rate
6	50 ms transmission rate
7	20 ms transmission rate
8	Reserved for SAE assignment (set to one)

Where 0 = Transmission Rate Supported by Engine and 1 = Transmission Rate Not supported by Engine

Note: FF for this byte implies that the engine only supports standard temporary power train control (e.g. 10 ms)

Data Length: 8 bits
 Resolution: 256 states/8 bit, 0 offset
 Data Range: 0 to 255 Operational Range: same as data range
 Type: Status
 Supporting information:
 PGN reference: 65251

SPN 3345 (R) Support TSC1 Control Purpose Group 1

This parameter indicates which TSC1 control purposes are supported in group 1 of 4. One bit is used to convey the support of each Control Purpose. A value of 0 equals supported and a value of 1 equals not supported. This bit logic is used to allow the default to FF to be backward compatible.

This group of 4 parameters (SPNs 3345, 3346, 3347, and 3348) indicates which TSC1 Control Purposes are supported by the engine ECU in addition to the Temporary Powertrain Control Purpose (which is denoted as control purpose P32). All ones in the Group 1 through 4 parameters indicates the engine only supports Temporary Powertrain Control.

Group 1 of 4

Bit Position	Control Purpose Value	Control Purpose Description
1	P1	Accelerator Pedal/Operator Selection
2	P2	Cruise Control
3	P3	PTO Governor
4	P4	Road Speed Governor
5	P5	Reserved for assignment by SAE
6	P6	Reserved for assignment by SAE
7	P7	Reserved for assignment by SAE
8	P8	Reserved for assignment by SAE

Where 0 = Control Purpose is supported and 1 = Control Purpose is not supported

Data Length: 8 bits
 Resolution: 256 states/8 bit, 0 offset
 Data Range: 0 to 255 Operational Range: same as data range
 Type: Status
 Supporting information:
 PGN reference: 65251

SPN 3346 (R) Support TSC1 Control Purpose Group 2

This parameter indicates which TSC1 control purposes are supported in group 2 of 4. One bit is used to convey the support of each Control Purpose. A value of 0 equals supported and a value of 1 equals not supported. This bit logic is used to allow the default to FF to be backward compatible.

This group of 4 parameters (SPNs 3345, 3346, 3347, and 3348) indicates which TSC1 Control Purposes are supported by the engine ECU in addition to the Temporary Powertrain Control Purpose (which is denoted as control purpose P32). All ones in the Group 1 through 4 parameters indicates the engine only supports Temporary Powertrain Control.

Group 2 of 4

Bit Position	Control Purpose Value	Control Purpose Description
1	P9	Reserved for assignment by SAE
2	P10	Reserved for assignment by SAE
3	P11	Reserved for assignment by SAE
4	P12	Reserved for assignment by SAE
5	P13	Reserved for assignment by SAE
6	P14	Reserved for assignment by SAE
7	P15	Reserved for assignment by SAE
8	P16	Reserved for assignment by SAE

Where 0 = Control Purpose is supported and 1 = Control Purpose is not supported

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65251

SPN 3347 (R) Support TSC1 Control Purpose Group 3

This parameter indicates which TSC1 control purposes are supported in group 3 of 4. One bit is used to convey the support of each Control Purpose. A value of 0 equals supported and a value of 1 equals not supported. This bit logic is used to allow the default to FF to be backward compatible.

This group of 4 parameters (SPNs 3345, 3346, 3347, and 3348) indicates which TSC1 Control Purposes are supported by the engine ECU in addition to the Temporary Powertrain Control Purpose (which is denoted as control purpose P32). All ones in the Group 1 through 4 parameters indicates the engine only supports Temporary Powertrain Control.

Group 3 of 4

Bit Position	Control Purpose Value	Control Purpose Description
1	P17	Reserved for assignment by SAE
2	P18	Reserved for assignment by SAE
3	P19	Reserved for assignment by SAE
4	P20	Reserved for assignment by SAE
5	P21	Reserved for assignment by SAE
6	P22	Reserved for assignment by SAE
7	P23	Reserved for assignment by SAE
8	P24	Reserved for assignment by SAE

Where 0 = Control Purpose is supported and 1 = Control Purpose is not supported

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65251

SPN 3348 (R) Support TSC1 Control Purpose Group 4

This parameter indicates which TSC1 control purposes are supported in group 4 of 4. One bit is used to convey the support of each Control Purpose. A value of 0 equals supported and a value of 1 equals not supported. This bit logic is used to allow the default to FF to be backward compatible.

This group of 4 parameters (SPNs 3345, 3346, 3347, and 3348) indicates which TSC1 Control Purposes are supported by the engine ECU in addition to the Temporary Powertrain Control Purpose (which is denoted as control purpose P32). All ones in the Group 1 through 4 parameters indicates the engine only supports Temporary Powertrain Control.

Group 4 of 4

Bit Position	Control Purpose Value	Control Purpose Description
1	P25	Reserved for assignment by SAE
2	P26	Reserved for assignment by SAE
3	P27	Reserved for assignment by SAE
4	P28	Reserved for assignment by SAE
5	P29	Reserved for assignment by SAE
6	P30	Reserved for assignment by SAE
7	P31	Reserved for assignment by SAE
8	See Note	Not assignable, must always be set to 1.

Where 0 = Control Purpose is supported and 1 = Control Purpose is not supported

NOTE: P32 is always supported and is Temporary Power Train Control (the original use of the TSC1 Command). The engine configuration will not indicate separate support of Temporary Power Train Control mode.

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65251

SPN 3349 (R) TSC1 Transmission Rate

This parameter indicates the transmission rate at which the sending device will transmit the TSC1 message. The engine shall adjust its timeout for TSC1 messages accordingly. Variable TSC1 transmission rates shall only apply to messages sent to the engine.

A value of all ones is to be used in TSC1 messages directed to retarders because the TSC1 Transmission Rate parameter is not applicable for retarders. All TSC1 messages sent to the retarder shall use the standard 50 ms rate.

Devices sending TSC1 messages to the engine should only invoke alternative transmission rates which the engine has indicated it supports in SPN 3344 – Support Variable Rate TSC1 Message.

000 = 1000 ms transmission rate

001 = 750 ms transmission rate

010 = 500 ms transmission rate

011 = 250 ms transmission rate

100 = 100 ms transmission rate

101 = 50 ms transmission rate

110 = 20 ms transmission rate

111 = Use standard TSC1 transmission rates of 10 ms to engine

Note: Sending devices shall not send variable rate TSC1 messages to the engine for unsupported control purposes.

Data Length: 3 bits

Resolution: 8 states/3 bit, 0 offset

Data Range: 0 to 7

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 0

SPN 3350 (R) TSC1 Control Purpose

State signal which indicates which control mode the sending device is using to generate the TSC1 command. Note that the modes are not in prioritized order. Not all modes may be relevant for a given device. Some devices may not implement all functions. For typical priorities refer to Figures SPN512_A, SPN512_B for engine control and Figure SPN695_A. The TSC1 control purpose shall only apply to messages sent to the engine.

A value of all ones is to be used in TSC1 messages directed to retarders because the TSC1 Control Purpose parameter is not applicable for retarders.

00000 = P1 = Accelerator Pedal/Operator Selection
00001 = P2 = Cruise Control
00010 = P3 = PTO Governor
00011 = P4 = Road Speed Governor
00100 = P5 = Engine Protection
00101 - 11110 = P6-P31 = Reserved for SAE Assignment
11111 = P32 = Temporary Power Train Control (Original use of TSC1 Command)

Note: Sending devices shall not send variable rate TSC1 messages to the engine for unsupported control purposes.

Data Length: 5 bits
Resolution: 32 states/5 bit, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 0

SPN 3353 (R) Alternator 1 Status

Alternator 1 operating status.

00 Alternator 1 not charging
01 Alternator 1 charging
10 error
11 not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65237

SPN 3354 (R) Alternator 2 Status

Alternator 2 operating status.

00 Alternator 2 not charging
01 Alternator 2 charging
10 error
11 not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65237

SPN 3355 (R) Alternator 3 Status

Alternator 3 operating status.

00 Alternator 3 not charging
01 Alternator 3 charging
10 error
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65237

SPN 3356 (R) Alternator 4 Status

Alternator 4 operating status.

00 Alternator 4 not charging
01 Alternator 4 charging
10 error
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 65237

SPN 3357 (R) Actual Maximum Available Engine - Percent Torque

This is the maximum amount of torque that the engine can immediately deliver as a percentage of the reference engine torque (SPN 544). The Actual Maximum Available Engine - Percent Torque shall take into consideration all engine torque derates (e.g. air fuel ratio control (AFC), noise control, etc.) that could potentially be active in the system. This parameter differentiates itself from the engine percent torque points 1 through 5 of the engine configuration map because it takes into account all dynamic internal inputs such as AFC and that it is updated on a 50ms basis.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61443

SPN 3358 (R) Engine Exhaust Gas Recirculation Inlet Pressure

EGR inlet gage pressure is measured after the EGR cooler and before the EGR valve.

Data Length: 1 byte

Resolution: 2 kPa/bit, 0 offset

Data Range: 0 to 500 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64961

SPN 3359 (R) Transmission Oil Filter Restriction Switch

This switch indicates whether the transmission oil filter is clogged.

00 - No restriction

01 - Restriction exists on oil filter

10 - Error

11 - Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference:

SPN 3365 (R) Relative Blade Height

The measured vertical distance from a fixed location on the machine blade to a ground-based reference (i.e. relative height). Examples of a ground based reference include a curb, a stringline or the ground itself. The measurement may be positive or negative based on the initial reference used.

Data Length: 2 bytes

Resolution: 0.1 mm/bit, -3,200 mm offset

Data Range: -3,200 to 3,225.5 mm Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61460

SPN 3366 (R) Relative Blade Height and Blade Rotation Angle Measurement Latency

The estimated measurement latency of the measurement.

NOTE: This is only the sensor latency and does not include any additional latencies that might exist because of the CAN Bus or overall system implementation.

For example, if the technique used is a sonic pulse/echo system, the round trip time divided by two will be a reasonably accurate estimate of the measurement latency if the processing time is small with respect to the propagation time.

Data Length: 1 byte

Resolution: 0.5 ms/bit, 0 offset

Data Range: 0 to 125 ms Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 61460

SPN 3367 (R) Relative Blade Height Figure of Merit

Figure of merit for blade height measurement.

Bits

00 Relative Blade Height fully functional. Data is within sensor specification.

01 Relative Blade Height degraded. Data is suspect due to environmental conditions.

10 Relative Blade Height failed.

11 Relative Blade Height not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 61460

SPN 3368 (R) Network Transceiver Status 1

Indicates the status of the transceiver for the wireless communications network type

0 = Off

1 = On

2 = Not Authorized to Operate on Network

3-250 = Reserved for Future Assignment

251-253 = Reserved

254 = Error

255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64937

SPN 3369 (R) Network Service Status 1

Indicates the status of the Service for the wireless communications network type

0 = Local Service

1 = Roaming Service

2 = Service not available

3 = Not Authorized to Operate on Service

4-250 = Reserved for Future Assignment

251-253 = Reserved

254 = Error

255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64937

SPN 3370 (R) Network Antenna Status 1

Indicates the status of the antenna for the wireless communications network type

0 = Off

1 = On

2-250 = Reserved for Future Assignment

251-253 = Reserved

254 = Error

255 = Not Available

Data Length: 8 bits

Data Range: 0 to 3

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64933

SPN 3442 (R) Network Transceiver Status 2

Indicates the status of the transceiver for the wireless communications network type

0 = Off
1 = On
2 = Not Authorized to Operate on Network
3-250 = Reserved for Future Assignment
251-253 = Reserved
254 = Error
255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64936

SPN 3443 (R) Network Service Status 2

Indicates the status of the Service for the wireless communications network type

0 = Local Service
1 = Roaming Service
2 = Service not available
3 = Not Authorized to Operate on Service
4-250 = Reserved for Future Assignment
251-253 = Reserved
254 = Error
255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64936

SPN 3444 (R) Network Antenna Status 2

Indicates the status of the antenna for the wireless communications network type

0 = Off

1 = On

2-250 = Reserved for Future Assignment

251-253 = Reserved

254 = Error

255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64936

SPN 3445 (R) Network Signal Strength 2

Indicates the signal strength for the wireless communications network type.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64936

SPN 3446 (R) Wireless Communication Network Type 2

Type of Wireless Communication Network

0 = Cellular network #1

1 = Cellular network #2

2 = Wireless LAN #1

3 = Wireless LAN #2

4 = Satellite network

5-250 = Reserved for Future Assignment

251-253 = Reserved

254 = Error

255 = Not Available

Data Length: 8 bits

Resolution: 256 states/8 bit, 0 offset

Data Range: 0 to 255

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64936

SPN 3447 (R) Remote PTO preprogrammed speed control switch #2

Switch signal which indicates that the remote PTO toggle switch #2 is in the enabled (ON) position. If the toggle switch is enabled and other conditions are satisfied then the remote PTO control feature is activated and the PTO will control at the preprogrammed set speed #2.

00 - Off
01 - On
10 - Error
11 - Not Available

Note: This switch is different than the 1-8 Preprogrammed Set Speeds because this is a physical switch input, not a user programmable set speed (although the associated PTO set speed for this toggle switch is user defined).

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65264

SPN 3448 (R) Auxiliary Input Ignore Switch

Switch signal which overrides other switch input's ability to disable an engine's operating condition.

00 - Off
01 - On
10 - Error
11 - Not Available

This switch input can be used to prevent the PTO from disengaging if another switch input's state changes. For example, if the PTO is normally disengaged when the clutch is depressed, then this switch would allow the user to use PTO while depressing the clutch.

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65264

SPN 3452 (R) Enable Switch – Transmission input shaft PTO 1

Status of the operator's switch or other input which indicates the desire for engaging the first PTO drive mounted on the transmission case. There may be more than one PTO drive mounted on the transmission case.

00 Enable switch off – PTO operation not desired
01 Enable switch on – PTO operation desired
10 Error
11 Not available

Data Length: 2 bits
Resolution: 4 states/2 bit, 0 offset
Data Range: 0 to 3 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64932

SPN 3453 (R) Enable Switch – Transmission input shaft PTO 2

Status of the operator's switch or other input which indicates the desire for engaging the second PTO drive mounted on the transmission case. If there is only one PTO drive on the transmission case, use SPN 3452 Enable Switch – Transmission input shaft PTO 1.

00 Enable switch off – PTO operation not desired
01 Enable switch off – PTO operation desired
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3454 (R) Enable Switch – Transmission output shaft PTO

Status of the operator's switch or other input which indicates the desire for engaging the PTO drive mounted on the transmission output shaft.

00 Enable switch off – PTO operation not desired
01 Enable switch off – PTO operation desired
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3455 (R) Enable Switch – Transfer case output shaft PTO

Status of the operator's switch or other input which indicates the desire for engaging the PTO drive mounted on the output shaft of the transfer case.

00 Enable switch off – PTO operation not desired
01 Enable switch off – PTO operation desired
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3456 (R) Engagement Consent – Transmission input shaft PTO 1

Status of the transmission controller's consent to engage the first or sole PTO drive mounted on the transmission case. The controller in charge of the PTO drive should monitor this parameter and only engage the drive when consent is given. If consent is removed, while the PTO drive is engaged, the drive controller should disengage the drive as soon as possible. Engaging the drive or continuing drive engagement when consent is removed may result in damage to the transmission and / or the PTO drive mechanism.

- 00 Consent not given – PTO drive should not be engaged
- 01 Consent given – PTO drive may be engaged
- 10 Error
- 11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3457 (R) Engagement Consent – Transmission input shaft PTO 2

Status of the transmission controller's consent to engage the second PTO drive mounted on the transmission case. The controller in charge of the PTO drive should monitor this parameter and only engage the drive when consent is given. If consent is removed while the PTO drive is engaged, the drive controller should disengage the drive as soon as possible. Engaging the drive or continuing drive engagement when consent is removed may result in damage to the transmission and / or the PTO drive mechanism. If there is only one PTO drive on the transmission case, use SPN 3456 Engagement Consent – Transmission input shaft PTO 1.

- 00 Consent not given – PTO drive should not be engaged
- 01 Consent given – PTO drive may be engaged
- 10 Error
- 11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3458 (R) Engagement Consent – Transmission output shaft PTO

Status of the transmission controller's consent to engage the PTO drive connected to the transmission output shaft. The controller in charge of the PTO drive should monitor this parameter and only engage the drive when consent is given. If consent is removed, while the PTO drive is engaged, the drive controller should disengage the drive as soon as possible. Engaging the drive or continuing drive engagement when consent is removed may result in damage to the transmission and / or the PTO drive mechanism.

- 00 Consent not given – PTO drive should not be engaged
- 01 Consent given – PTO drive may be engaged
- 10 Error
- 11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3459 (R) Engagement Consent – Transfer case output shaft PTO

Status of the transmission controller's consent to engage the PTO drive connected to the transfer case output shaft. The controller in charge of the PTO drive should monitor this parameter and only engage the drive when consent is given. If consent is removed, while the PTO drive is engaged, the drive controller should disengage the drive as soon as possible. Engaging the drive or continuing drive engagement when consent is removed may result in damage to the transmission and / or the PTO drive mechanism.

00 Consent not given – PTO drive should not be engaged
01 Consent given – PTO drive may be engaged
10 Error
11 Not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64932

SPN 3460 (R) Engagement Status – Transmission input shaft PTO 1

Reports if this specific PTO drive is engaged. This parameter should be broadcast only by the controller(s) receiving feedback about the specific drive.

For example, a pressure switch may be used to determine if a PTO-driven pump has been engaged. If the Body Controller (SA33) were monitoring this feedback signal, it should be the node broadcasting this parameter.

00 Drive not engaged
01 Drive is engaged

PGN reference: 64932

SPN 3464 (R) Engine Throttle Actuator 1 Control Command

The control command to throttle actuator 1, normalized to percent, where 0% represents fully closed and 100% represents fully open. Typically, this throttle actuator is used to regulate air or air / fuel mix to the engine. Using the standard convention for determining the position. Left/front is #1 and right/rear is #2 (SPN 3465).

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: 0 to 100%

Type: Status

Supporting information:

PGN reference: 61466

SPN 3465 (R) Engine Throttle Actuator 2 Control Command

The control command to throttle actuator 2, normalized to percent, where 0% represents fully closed and 100% represents fully open. Typically, this throttle actuator is used to regulate air or air / fuel mix to the engine. Using the standard convention for determining the position. Left/front is #1 (SPN 3464) and right/rear is #2.

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: 0 to 100%

Type: Status

Supporting information:

PGN reference: 61466

SPN 3466 (R) Engine Fuel Valve 2 Inlet Absolute Pressure

Absolute pressure of gas on inlet side of the second fuel system control valve, using standard convention for determining position. Left/front is #1 (SPN 1390) and right/rear is #2.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64930

SPN 3467 (R) Engine Gas 2 Mass Flow Rate

Gas mass flow rate delivered to an engine through its second fuel control system, using standard convention for determining position. Left/front is #1 (SPN 1241) and right/rear is #2.

Data Length: 2 bytes

Resolution: 0.05 kg/h per bit, 0 offset

Data Range: 0 to 3212.75 kg/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64930

SPN 3468 (R) Engine Fuel Temperature 2

Temperature 2 of fuel (or gas). See SPN 174 for fuel temperature 1.

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64930

SPN 3469 (R) Engine Fuel Valve 2 Outlet Absolute Pressure

Absolute pressure of gas on outlet side of the second fuel system control valve. See SPN 2980 for the first or only fuel system control valve.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64930

SPN 3470 (R) Engine Turbocharger Compressor Control

The control command to a compressor bypass actuator, normalized to percent, where 0% nominally represents fully closed and 100% represents fully open. Typically, the turbocharger compressor bypass actuator is used to keep the engine out of surge by metering compressed air (charge).

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: 0 to 100%

Type: Status

Supporting information:

PGN reference: 64931

SPN 3479 (R) Aftertreatment 1 Fuel Pressure Control

Position that the controller is commanding the aftertreatment 1 fuel pressure control to maintain. 0% = fully closed, 100% = fully open.

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 %

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64929

SPN 3480 (R) Aftertreatment 1 Fuel Pressure

Pressure of the fuel for aftertreatment 1.

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64929

SPN 3481 (R) Aftertreatment 1 Fuel Rate

Rate of fuel being delivered to aftertreatment 1 for regeneration

Data Length: 2 bytes

Resolution: 0.05 L/h per bit, 0 offset

Data Range: 0 to 3,212.75 L/h

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64929

SPN 3482 (R) Aftertreatment 1 Fuel Enable Actuator

Indicates whether aftertreatment 1 fuel enable actuator is on or off

00 not active
01 active
10 reserved for SAE assignment
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64929

SPN 3483 (R) Aftertreatment 1 Regeneration Status

Indicates whether regeneration is active or inactive in aftertreatment 1

00 not active
01 active
10 reserved for SAE assignment
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64929

SPN 3484 (R) Aftertreatment 1 Ignition

Indicates whether aftertreatment 1 ignition circuit is energized by the ECM.

00 not active
01 active
10 reserved for SAE assignment
11 not available

Data Length: 2 bits

Resolution: 4 states/2 bit, 0 offset

Data Range: 0 to 3

Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64929

SPN 3485 (R) Aftertreatment 1 Supply Air Pressure

Pressure of the supply air for aftertreatment 1

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64927

SPN 3486 (R) Aftertreatment 1 Purge Air Pressure

Pressure of the purge air supply for aftertreatment 1

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64927

SPN 3487 (R) Aftertreatment 1 Air Pressure Control

Position that the controller is commanding the aftertreatment 1 air pressure control to maintain. 0% = fully closed, 100% = fully open

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64927

SPN 3488 (R) Aftertreatment 1 Air Pressure Actuator Position

Position of the aftertreatment 1 air pressure actuator as measured by a position feedback sensor.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64927

SPN 3489 (R) Aftertreatment 1 Air Enable Actuator

Indicates whether aftertreatment 1 air enable actuator is on or off

00 not active

PGN reference: 64928

SPN 3499 (R) Aftertreatment 2 Supply Air Pressure

Pressure of the supply air for aftertreatment 2

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64926

SPN 3500 (R) Aftertreatment 2 Purge Air Pressure

Pressure of the purge air supply for aftertreatment 2

Data Length: 2 bytes

Resolution: 0.1 kPa/bit, 0 offset

Data Range: 0 to 6,425.5 kPa Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64926

SPN 3501 (R) Aftertreatment 2 Air Pressure Control

Position that the controller is commanding the aftertreatment 2 air pressure control to maintain. 0% = fully closed, 100% = fully open

Data Length: 2 bytes

Resolution: 0.0025 %/bit, 0 offset

Data Range: 0 to 160.6375 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64926

SPN 3502 (R) Aftertreatment 2 Air Pressure Actuator Position

Position of the aftertreatment 2 air pressure actuator as measured by a position feedback sensor.

Data Length: 1 byte

Resolution: 0.4 %/bit, 0 offset

Data Range: 0 to 100 % Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64926

SPN 3503 (R) Aftertreatment 2 Air Enable Actuator

Type: Status

Supporting information:

PGN reference: 64926

SPN 3509 (R) Sensor supply voltage 1

Sensor ECU supply voltage 1

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64925

SPN 3510 (R) Sensor supply voltage 2

Sensor ECU supply voltage 2

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64925

SPN 3511 (R) Sensor supply voltage 3

Sensor ECU supply voltage 3

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64925

SPN 3512 (R) Sensor supply voltage 4

Sensor ECU supply voltage 4

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64925

SPN 3513 (R) Sensor supply voltage 5

Sensor ECU supply voltage 5

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64924

SPN 3514 (R) Sensor supply voltage 6

Sensor ECU supply voltage 6

Data Length: 2 bytes

Resolution: 0.05 V/bit, 0 offset

Data Range: 0 to 3212.75 V

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64924

SPN 3515 (R) Catalyst Reagent Temperature 2

Temperature of the catalyst reagent at the device measuring reagent quality

Data Length: 1 byte

Resolution: 1 deg C/bit, -40 deg C offset

Data Range: -40 to 210 deg C

Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64923

SPN 3516 (R) Catalyst Reagent Concentration

A measure of the concentration of urea in water. Zero percent means that the tank contains no urea. A 32.5% value indicates that the reagent is of the proper concentration. The 32.5% value indicates that the concentration is highest quality.

Data Length: 1 byte
Resolution: 0.25 %/bit, 0 offset
Data Range: 0 to 62.5 % Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64923

SPN 3517 (R) Catalyst Tank Level 2

The measure of the reagent level in the catalyst tank.

Data Length: 2 bytes
Resolution: 0.1 mm/bit, 0 offset
Data Range: 0 to 6,425.5 mm (0 to 6.4255 Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 65110

SPN 3518 (R) Catalyst Reagent Conductivity

A measure of the conductivity of the reagent or fluid at the sensor. The conductivity is an indication of the reagent's chemical make up.

Data Length: 1 byte
Resolution: 5 microSiemens/mm, 0 offset
Data Range: 0 to 1250 microSiemens/mm Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64923

SPN 3519 (R) Catalyst Reagent Temperature 2 Preliminary FMI

Used to identify the applicable J1939-73 FMI that applies to the most significant failure of the catalyst temperature sensor.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64923

SPN 3520 (R) Catalyst Reagent Properties Preliminary FMI

Used to identify the applicable J1939-73 FMI that applies to the most significant failure of the catalyst reagent properties sensor. This may be used for indicating failures of the catalyst reagent concentration, catalyst reagent conductivity or catalyst reagent type.

Data Length: 5 bits
Resolution: Binary, 0 offset
Data Range: 0 to 31 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64923

SPN 3521 (R) Catalyst Reagent Type

This parameter indicates what reagent is in the tank.

0000 - Catalyst reagent is urea
0001 - Catalyst reagent is water
0010 - Catalyst reagent is diesel
0011 - Catalyst reagent is proper
0100 to 1100 - Reserved for SAE assignment
1101 - Not able to determine catalyst reagent type (type unknown)
1110 - Error detected with urea reagent type detection
1111 - Not available

Data Length: 4 bits
Resolution: 16 states/4 bit, 0 offset
Data Range: 0 to 15 Operational Range: same as data range
Type: Status
Supporting information:
PGN reference: 64923

SPN 3522 (R) Aftertreatment 1 Total Fuel Used

Total amount of fuel used by aftertreatment device 1 over the lifetime of the device.

Data Length: 4 bytes
Resolution: 0.5 L/bit, 0 offset
Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64920

SPN 3523 (R) Aftertreatment 1 Total Regeneration Time

Total amount of time that aftertreatment device 1 has been regenerating over the lifetime of the device.

Data Length: 4 bytes
Resolution: 1 s/bit, 0 offset
Data Range: 0 to 4,211,081,215 s Operational Range: same as data range
Type: Measured
Supporting information:
PGN reference: 64920

SPN 3524 (R) Aftertreatment 1 Total Disabled Time

Total amount of time that aftertreatment 1 regeneration has been manually disabled.

Data Length: 4 bytes

Resolution: 1 s/bit, 0 offset

Data Range: 0 to 4,211,081,215 s Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64920

SPN 3525 (R) Aftertreatment 1 Total Number of Active Regenerations

Total number of active regenerations by aftertreatment device 1 over the lifetime of the device.

Data Length: 4 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 4,294,967,295 counts Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64920

SPN 3526 (R) Aftertreatment 2 Total Fuel Used

Total amount of fuel used by aftertreatment device 2 over the lifetime of the device.

Data Length: 4 bytes

Resolution: 0.5 L/bit, 0 offset

Data Range: 0 to 2,105,540,607.5 L Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64921

SPN 3527 (R) Aftertreatment 2 Total Regeneration Time

Total amount of time that aftertreatment device 2 has been regenerating over the lifetime of the device.

Data Length: 4 bytes

Resolution: 1 s/bit, 0 offset

Data Range: 0 to 4,211,081,215 s Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64921

SPN 3528 (R) Aftertreatment 2 Total Disabled Time

Total amount of time that aftertreatment 2 regeneration has been manually disabled.

Data Length: 4 bytes

Resolution: 1 s/bit, 0 offset

Data Range: 0 to 4,211,081,215 s Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 64921

SPN 3529 (R) Aftertreatment 2 Total Number of Active Regenerations

Total number of active regenerations by aftertreatment device 2 over the lifetime of the device.

Data Length: 4 bytes

Resolution: 1 count/bit, 0 offset

Data Range: 0 to 4,294,967,295 counts Operational Range: same as data range

Type: Measured

Supporting information:

PGN reference: 64921

SPN 3532 (R) Catalyst Tank Level Preliminary FMI

Used to identify the applicable J1939-73 FMI that applies to the most significant failure of the catalyst tank level sensor. This FMI is applicable to either the catalyst tank level 1 or catalyst tank level 2 parameters.

Data Length: 5 bits

Resolution: Binary, 0 offset

Data Range: 0 to 31 Operational Range: same as data range

Type: Status

Supporting information:

PGN reference: 65110

APPENDIX C

PGNs

PGN 0 (R) Torque/Speed Control 1 - TSC1

NOTE - Retarder may be disabled by commanding a torque limit of 0%. Use of the limit mode allows the use of the retarder only up to the limit specified in the request. This can be used to permit retarding of up to 50%, for example, if that limit is required by some device such as an EBS, or it can disable the use of the retarder by others, as when an ABS controller detects wheel slip.

Transmission Repetition Rate: to engine: Control Purpose dependent or 10 ms
to retarder: 50 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 0

PDU Specific: DA PGN Supporting Information:

Default Priority: 3

Parameter Group Number: 0 (0x0)

Start Position	Length	Parameter Name	SPN

8	1 byte	Adjust local hour offset	1610

PGN 56320**Anti-theft Status****- ATS**

NOTE—See Figures PGN56320_A to PGN56320_F for examples of Anti-theft message transfers. Bit 1 is the right most bit in each byte.

Transmission Repetition Rate: This message is transmitted in response to an Anti-Theft Request message. This message is also sent when the component has an abnormal power interruption. In this situation the Anti-Theft Status Report is sent without the Anti-Theft Request.

Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 220
 PDU Specific: DA PGN Supporting Information: See Appendix D - PGN 56320
 Default Priority: 7
 Parameter Group Number: 56320 (0xDC00)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Anti-theft Encryption Seed Present Indicator	1194
1.3	2 bits	Anti-theft Password Valid Indicator	1195
1.5	2 bits	Anti-theft Component Status States	1196
1.7	2 bits	Anti-theft Modify Password States	1197
2-8	7 bytes	Anti-theft Random Number	1198

PGN 56576**Anti-theft Request****- ATR**

NOTE—See Figures PGN56320_A thru PGN56320_F for examples of Anti-theft message transfers. Bit 1 is the right most bit in each byte.

Transmission Repetition Rate: Transmission of this message is interrupt driven. This message is also transmitted upon power-up of the interfacing device sending this message.

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 221

PDU Specific: DA PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 56576 (0xDD00)

7.7	2 bits	Request Cab Zone Heating	1686
8	1 byte	Selected Maximum Vehicle Speed Limit	2596

PGN 61440**Electronic Retarder Controller 1****- ERC1**

NOTE- This message will be transmitted by several types of retarding devices such as engine compression release brakes, exhaust system restriction brakes, and driveline retarders using hydraulic, electric, or mechanical friction to slow the vehicle. The source address of the message will indicate which one, and the type and location of the retarder are available in the Retarder Configuration Message (see PGN 65249) if that detail is important to the receiver.

Users should also be aware that the Shift Assist and Brake Assist switch status in the first byte of this message are to be used by other ECUs that might request retarding force from the retarder to know when such assistance is available. The state of the "switches" will NOT prevent the retarder from activating if requested, but should be honored by the requester (by not sending a request when the appropriate "switch" is not enabled) to prevent unwarranted noise.

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Transmission Torque Converter Ratio	3030

PGN 61453**(R)****Land Leveling System Operational Information****- LOI**

Group of operational parameters associated with the Land Leveling System, such as switch states. This is provided to the device controlling the blade, and is usually directed at the primary land leveling controller.

Notes:

1. The parameter group is filled with SPNs sent to the Land Leveling System controller. Similar PGNs exist, 65138 for example, but PGN 65138 is sent out by the Land Leveling System primary controller to reflect the mode the land leveling system has been put into (auto, manual). This logical decision to put the system into auto/manual mode is based in part on the input from this PGN, along with other various inputs. It makes more sense to create this PGN filled with parameters sourced from the non-primary controller, rather than use the PGN sourced by the primary controller itself. In the future, other SPNs coming from the non-primary controller can be added to the PGN. There are plans to add more switch values in the future.

2. Other systems with automated blade controls should be able to use this parameter group, since it contains measured switch values.

PGN 61458 (R) Fifth Wheel Smart Systems 1**- FWSS1**

Fifth wheel smart system information. Parameters used to determine the status of the tractor to trailer coupling system integrity.

Transmission Repetition Rate: 50 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 240
 PDU Specific: 18 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 61458 (0xF012)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Fifth Wheel Vertical Force	3308
3	2 bytes	Fifth Wheel Drawbar Force	3309
5	2 bytes	Fifth Wheel Roll Moment	3310
7.1	2 bits	Fifth Wheel Roll Warning Indicator	3317

PGN 61459 (R) Slope Sensor Information**- SSI**

The Slope Sensor Information message shall provide a measurement of the vehicles pitch angle, a measurement of the vehicles roll angle, and a measurement of the vehicles pitch rate around the y-axis.

Vehicle axis system defined in SAE J670e, Vehicle Dynamics Terminology.

8.4.7 Vehicle Roll Angle – The angle between the vehicle y-axis and the ground plane.

8.4.9 Vehicle Pitch Angle – The angle between the vehicle x-axis and the ground plane.

Note 6

"Angular rotations are positive clockwise when looking in the positive direction of the axis about which rotation occurs."

The data within the message shall contain the measured pitch, roll, and pitch rate, figure of merits for the three measurements, a compensated measurement indicator, and measurement latency for the sensor measurements.

Note 1) When this PGN is used to transmit information from a device not attached to the vehicle, the components local frame of reference shall be used.

Note 2) The NAME of the source of the PGN shall be used to associate to the frame of reference. (e.g, Machine control will report vehicle pitch and roll, blade control will report blade pitch and roll).

Transmission Repetition Rate: 10 ms

Data Length: 8

7.7	2 bits	Pitch and Roll Compensated	3326
8	1 byte	Roll and Pitch Measurement Latency	3327

PGN 61460 (R) Blade Information**- BI**

A measurement of the machine's relative blade height and a rotational angle measurement of the machine blade yaw angle around the machine z-axis as defined in SAE J670e, Vehicle Dynamics Terminology.

The Relative Blade Height is defined to be the relative vertical distance from a fixed location on the machine blade to a reference. The reference might be, for example, the ground or a stringline.

The data in the message is intended to be accurate enough for real-time control.

SAE J670e, Note 6

"Angular rotations are positive clockwise when looking in the positive direction of the axis about which rotation occurs."

The Blade Rotation Angle is defined to be the angle from the null position on the machine. The null position is orthogonal from the z-axis along the x-axis.

The data within the message shall contain the measured Relative Blade Height, the measured Blade Rotation Angle, a figure of merit for the Relative Blade Height, a figure of merit for the Blade Rotation Angle, and an estimated measurement latency.

Transmission Repetition Rate: 50 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 240

PDU Specific: 20 PGN Supporting Information:

Default Priority: 3

Parameter Group Number: 61460 (0xF014)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Relative Blade Height	3365
3-4	2 bytes	Blade Rotation Angle	3331
5	1 byte	Relative Blade Height and Blade Rotation Angle Measurement Latency	3366
6.1	2 bits	Relative Blade Height Figure of Merit	3367
6.3	2 bits	Blade Rotation Angle Figure of Merit	3332

PGN 61462 (R) Cylinder Combustion Status**- CCS**

Used to send the SPNs containing information relating to the state of combustion for 24 cylinders. When there is no combustion detected on any one cylinder, this PGN needs to be sent every crank revolution (engine speed dependant). If combustion is good on all cylinders, 5 seconds would be satisfactory for a transmission rate. This will allow communication between a separate module monitoring combustion inside the engine cylinders and the control module that needs this information to make engine related decisions.

Transmission Repetition Rate: Engine speed dependent when there is no combustion, once every 5 seconds otherwise

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 240

PDU Specific: 22 PGN Supporting Information:

Default Priority: 3

Parameter Group Number: 61462 (0xF016)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Engine Cylinder 1 Combustion Status	3387
1.3	2 bits	Engine Cylinder 2 Combustion Status	3388
1.5	2 bits	Engine Cylinder 3 Combustion Status	3389
1.7	2 bits	Engine Cylinder 4 Combustion Status	3390

6.3	2 bits	Engine Cylinder 22 Combustion Status	3408
6.5	2 bits	Engine Cylinder 23 Combustion Status	3409
6.7	2 bits	Engine Cylinder 24 Combustion Status	3410

PGN 61463 (R) Engine Knock Level #1**- KL1**

Used to send the SPNs containing information relating to the level of knock for 8 cylinders. When knock is detected on any one cylinder, this PGN needs to be sent every crank revolution (engine speed dependant). If there is no knock detected on any cylinder, 5 seconds would be satisfactory for a transmission rate. This will allow communication between a separate module monitoring combustion inside the engine cylinders and the control module that needs this information to make engine related decisions.

Transmission Repetition Rate: Engine speed dependent when knock present, once every 5 seconds otherwise
Data Length: 8

PGN 61466 (R) Engine Throttle / Fuel Actuator Control Command - TFAC

Used to control networked electronic throttle control actuator and/or fuel control actuator valves. Otherwise, this PGN can be used to monitor commanded % positioning to electronic throttle control actuator and/or fuel control actuator valves.

Transmission Repetition Rate: 50 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 240
 PDU Specific: 26 PGN Supporting Information: See Appendix D - PGN 61466
 Default Priority: 4
 Parameter Group Number: 61466 (0xF01A)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Throttle Actuator 1 Control Command	3464
3-4	2 bytes	Engine Throttle Actuator 2 Control Command	3465
5-6	2 bytes	Engine Fuel Actuator 1 Control Command	633
7-8	2 bytes	Engine Fuel Actuator 2 Control Command	1244

PGN 64920 (R) Aftertreatment 1 Historical Information - AH11

Contains information about the history of the aftertreatment 1 system

Transmission Repetition Rate: On request
 Data Length: 16
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 152 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64920 (0xFD98)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Aftertreatment 1 Total Fuel Used	3522
05-08	4 bytes	Aftertreatment 1 Total Regeneration Time	3523
09-12	4 bytes	Aftertreatment 1 Total Disabled Time	3524
13-16	4 bytes	Aftertreatment 1 Total Number of Active Regenerations	3525

PGN 64921 (R) Aftertreatment 2 Historical Information**- AH12**

Contains information about the history of the aftertreatment 2 system

Transmission Repetition Rate: On request

Data Length: 16

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 153 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64921 (0xFD99)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Aftertreatment 2 Total Fuel Used	3526
05-08	4 bytes	Aftertreatment 2 Total Regeneration Time	3527
09-12	4 bytes	Aftertreatment 2 Total Disabled Time	3528
13-16	4 bytes	Aftertreatment 2 Total Number of Active Regenerations	3529

PGN 64923 (R) Catalyst Reagent Information**- CRI1**

Sensor Information which measures temperature, concentration, and conductivity of the catalyst reagent

Transmission Repetition Rate: 1 sec

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 155 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64923 (0xFD9B)

Start Position	Length	Parameter Name	SPN
1	1 byte	Catalyst Reagent Temperature 2	3515
2	1 byte	Catalyst Reagent Concentration	3516
3	1 byte	Catalyst Reagent Conductivity	3518
4.1	5 bits	Catalyst Reagent Temperature 2 Preliminary FMI	3519
5.1	5 bits	Catalyst Reagent Properties Preliminary FMI	3520
6.1	4 bits	Catalyst Reagent Type	3521

PGN 64924 (R) Sensor Electrical Power #2**- SEP2**

Voltage supplies for sensors #2

Transmission Repetition Rate: 1 sec

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 156 PGN Supporting Information: See Appendix D - PGN 65104

Default Priority: 6

Parameter Group Number: 64924 (0xFD9C)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Sensor supply voltage 5	3513
3-4	2 bytes	Sensor supply voltage 6	3514

PGN 64925 (R) Sensor Electrical Power #1**- SEP1**

Voltage supplies for sensors #1

Transmission Repetition Rate: 1 sec

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 157 PGN Supporting Information: See Appendix D - PGN 65104

Default Priority: 6

Parameter Group Number: 64925 (0xFD9D)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Sensor supply voltage 1	3509
3-4	2 bytes	Sensor supply voltage 2	3510
5-6	2 bytes	Sensor supply voltage 3	3511
7-8	2 bytes	Sensor supply voltage 4	3512

PGN 64926 (R) Aftertreatment 2 Air Control**- AAC2**

Contains information about the aftertreatment 2 air system

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 158 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64926 (0xFD9E)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Aftertreatment 2 Supply Air Pressure	3499
3-4	2 bytes	Aftertreatment 2 Purge Air Pressure	3500
5-6	2 bytes	Aftertreatment 2 Air Pressure Control	3501
7.1	1 byte	Aftertreatment 2 Air Pressure Actuator Position	3502
8.1	2 bits	Aftertreatment 2 Air System Relay	3506
8.3	2 bits	Aftertreatment 2 Atomization Air Actuator	3505
8.5	2 bits	Aftertreatment 2 Purge Air Actuator	3504
8.7	2 bits	Aftertreatment 2 Air Enable Actuator	3503

PGN 64927 (R) Aftertreatment 1 Air Control**- AAC1**

Contains information about the aftertreatment 1 air system

Transmission Repetition Rate: 500 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 159 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64927 (0xFD9F)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Aftertreatment 1 Supply Air Pressure	3485
3-4	2 bytes	Aftertreatment 1 Purge Air Pressure	3486
5-6	2 bytes	Aftertreatment 1 Air Pressure Control	3487
7.1	1 byte	Aftertreatment 1 Air Pressure Actuator Position	3488
8.1	2 bits	Aftertreatment 1 Air System Relay	3492
8.3	2 bits	Aftertreatment 1 Atomization Air Actuator	3491
8.5	2 bits	Aftertreatment 1 Purge Air Actuator	3490
8.7	2 bits	Aftertreatment 1 Air Enable Actuator	3489

PGN 64928 (R) Aftertreatment 2 Fuel Control**- AFC2**

Contains information about the aftertreatment 2 fuel system

Transmission Repetition Rate: 500 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 160 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64928 (0xFDA0)

5.5	2 bits	Lock Status of Door 7	3430
5.7	2 bits	Open Status of Door 7	3431
6.1	2 bits	Enable Status of Door 7	3432
6.3	2 bits	Lock Status of Door 8	3433
6.5	2 bits	Open Status of Door 8	3434
6.7	2 bits	Enable Status of Door 8	3435
7.1	2 bits	Lock Status of Door 9	3436
7.3	2 bits	Open Status of Door 9	3437
7.5	2 bits	Enable Status of Door 9	3438
7.7	2 bits	Lock Status of Door 10	3439
8.1	2 bits	Open Status of Door 10	3440
8.3	2 bits	Enable Status of Door 10	3441

PGN 64936 (R) Wireless Communications Message 2**- WCM2**

Message for reporting status information regarding the second instance of a wireless communications network on a device or system.

See PGN 64937 for the first wireless network.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 168 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64936 (0xFDA8)

Start Position	Length	Parameter Name	SPN
1	8 bits	Network Transceiver Status 2	3442
2	8 bits	Network Service Status 2	3443
3	8 bits	Network Antenna Status 2	3444
4	1 byte	Network Signal Strength 2	3445
5	8 bits	Wireless Communication Network Type 2	3446

PGN 64937 (R) Wireless Communications Message 1**- WCM1**

Message for reporting status information regarding the first instance of a wireless communications network on a device or system.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 169 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64937 (0xFDA9)

Start Position	Length	Parameter Name	SPN
1	8 bits	Network Transceiver Status 1	3368
2	8 bits	Network Service Status 1	3369
3	8 bits	Network Antenna Status 1	3370
4	1 byte	Network Signal Strength 1	3371
5	8 bits	Wireless Communication Network Type 1	3372

PGN 64938 (R) Engine Fluid Level/Pressure 4**- EFL/P4**

4th PGN which identifies parameters that are either measuring various pressures within the engine or identifying engine fluid levels

Transmission Repetition Rate: 500 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 170 PGN Supporting Information: See Appendix D - PGN 64938
 Default Priority: 6
 Parameter Group Number: 64938 (0xFDAA)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Charge Air Cooler 1 Inlet Pressure	3340
2	1 byte	Engine Charge Air Cooler 2 Inlet Pressure	3341
3	1 byte	Engine Coolant Pump Differential Pressure	3342
4-5	2 bytes	Engine Centrifugal Oil Filter speed	3343

PGN 64942 (R) Fifth Wheel Smart Systems 2**- FWSS2**

Fifth wheel smart system information #2. Message to convey operator parameters associated with the tractor to trailer coupling control and error state.

Transmission Repetition Rate: On Request
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 174 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64942 (0xFDAE)

Start Position	Length	Parameter Name	SPN
1.1	4 bits	Fifth Wheel Error Status	3307
1.5	2 bits	Fifth Wheel Lock Ready to Couple Indicator	3312
1.7	2 bits	Fifth Wheel Lock Couple Status Indicator	3313
2	1 byte	Fifth Wheel Slider Position	3311
3.1	2 bits	Fifth Wheel Slider Lock Indicator	3316

PGN 64943 (R) Aftertreatment 2 Intermediate Gas**- ATM2**

The purpose of this PGN is to group the aftertreatment intermediate gas temperature and pressure messages for bank 2.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 175 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64943 (0xFDAF)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 2 Exhaust Gas Temperature 2	3283
3	2 bytes	Aftertreatment 2 Particulate Trap Intermediate Gas Temperature	3284
5	2 bytes	Aftertreatment 2 Particulate Trap Differential Pressure	3285
7.1	5 bits	Aftertreatment 2 Exhaust Gas Temperature 2 Preliminary FMI	3286
7.6	5 bits	Aftertreatment 2 Particulate Trap Delta Pressure Preliminary FMI	3287
8.3	5 bits	Aftertreatment 2 Particulate Trap Intermediate Gas Temperature Preliminary FMI	3288

PGN 64944 (R) Aftertreatment 2 Outlet Gas 2**- AT202**

The purpose of this PGN is to group the aftertreatment outlet gas temperature messages for bank 2.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 176 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64944 (0xFDB0)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 2 Exhaust Gas Temperature 3	3279
3	2 bytes	Aftertreatment 2 Particulate Trap Outlet Gas Temperature	3280
5.1	5 bits	Aftertreatment 2 Exhaust Gas Temperature 3 Preliminary FMI	3281
6.1	5 bits	Aftertreatment 2 Particulate Trap Exhaust Gas Temperature Preliminary FMI	3282

PGN 64945 (R) Aftertreatment 2 Intake Gas 2 - AT2I2

The purpose of this PGN is to group the aftertreatment intake gas temperature messages for bank 2.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 177 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64945 (0xFDB1)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 2 Exhaust Gas Temperature 1	3275
3	2 bytes	Aftertreatment 2 Particulate Trap Intake Gas Temperature	3276
5.1	5 bits	Aftertreatment 2 Exhaust Gas Temperature 1 Preliminary FMI	3277
6.1	5 bits	Aftertreatment 2 Particulate Trap Intake Gas Temperature Preliminary FMI	3278

PGN 64946 (R) Aftertreatment 1 Intermediate Gas - ATM1

The purpose of this PGN is to group the aftertreatment intermediate gas temperature and pressure messages.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 178 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64946 (0xFDB2)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 1 Exhaust Gas Temperature 2	3249
3	2 bytes	Aftertreatment 1 Particulate Trap Intermediate Gas Temperature	3250

PGN 64947 (R) Aftertreatment 1 Outlet Gas 2**- AT102**

The purpose of this PGN is to group the aftertreatment outlet gas temperature messages.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 179 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64947 (0xFDB3)

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 1 Exhaust Gas Temperature 3	3245
3	2 bytes	Aftertreatment 1 Particulate Trap Outlet Gas Temperature	3246
5.1	5 bits	Aftertreatment 1 Exhaust Gas Temperature 3 Preliminary FMI	3247
6.1	5 bits	Aftertreatment 1 Particulate Trap Outlet Exhaust Gas Temperature Preliminary FMI	3248

PGN 64948 (R) Aftertreatment 1 Intake Gas 2**- AT112**

The purpose of this PGN is to group the aftertreatment intake gas temperature messages for bank 1.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 180 PGN Supporting Information:

Default Priority: 6

Start Position	Length	Parameter Name	SPN
1	2 bytes	Aftertreatment 1 Exhaust Gas Temperature 1	3241
3	2 bytes	Aftertreatment 1 Particulate Trap Intake Gas Temperature	3242
5.1	5 bits	Aftertreatment 1 Exhaust Gas Temperature 1 Preliminary FMI	3243
6.1	5 bits	Aftertreatment 1 Particulate Trap Intake Gas Temperature Preliminary FMI	3244

PGN 64953**Tire Pressure Reference Information****- TPRI**

Information on actual tire pressure reference value for monitoring.

NOTE—Message has to be repeated as necessary to transmit all available information. This method of location identification requires individual SPNs to be assigned to report failures specific to each individual component (i.e. each tire, each axle, etc.).

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 185 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64953 (0xFDB9)

Start Position	Length	Parameter Name	SPN
1	8 bits	Tire Location	3190
2	1 byte	Reference Tire Pressure	3191

PGN 64954**Farebox Status****- TR6**

Used to report alarms of the fare collection unit.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 186 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64954 (0xFDBA)

1.1	2 bits	Farebox Emergency Status	3179
2.1	7 bits	Farebox Alarm Identifier	3181

PGN 64955***Farebox Point of Sale*****- TR5**

Used to report stop level point of sale detail.

Transmission Repetition Rate: On request
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 187 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64955 (0xFDBB)

Start Position	Length	Parameter Name	SPN
1.1	4 bits	Transaction Type	3170
1.5	4 bits	Passenger Type	3171
2.1	4 bits	Type of Fare	3176
2.5	4 bits	Payment Details	3177
3.1	4 bits	Fare Validity	3165
3.5	4 bits	Pass Category	3166
4.1	5 bits	Initial Fare Agency	3167
5.1	3 bits	Type of Service	3172
5.4	5 bits	Transfer Type	3173
6, 7.1	12 bits	Route Number	3169
8	1 byte	Transfer Sold	3168

PGN 64956***Farebox Service Detail*****- TR4**

Used to identify service, assignments, and fare preset detail of the fare collection unit.

Transmission Repetition Rate: On request
 Data Length: 15
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 188 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64956 (0xFDBC)

Start Position	Length	Parameter Name	SPN
01.1	2 bits	Farebox Service Status	3178
01.3	3 bits	Trip Status	3180
02.1	4 bits	Trip Direction	3174
03	8 bits	Fare Presets	3175
04-05	2 bytes	Trip Number	3159
06-07	2 bytes	Pattern Number	3161
08-09	2 bytes	Assigned Route	3160
10-11	2 bytes	Assigned Run	3162
12-13	2 bytes	Assigned Block	3163
14-15	2 bytes	Driver's farebox security code	3164

PGN 64957**Signal Preemption****- TR3**

Status and configuration of the device used for intersection preemption.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 189 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64957 (0xFDBD)

Start Position	Length	Parameter Name	SPN
1.3	2 bits	Range Code Enable	3081
1.5	2 bits	Transit Route ID Usage	3080
1.7	2 bits	Intersection Preemption Request/Response	3079
2.1	4 bits	Priority of Response Sent by Emitter	3084
2.5	2 bits	Transit Door Enable	3083
2.7	2 bits	Strobe Activation Control Status	3082
3,4	2 bytes	Vehicle ID	3085

PGN 64958**Transit Route****- TR1**

The current route assigned to this transit vehicle. The transit route information may be entered into different devices by different authorities (fare collection, radio log, unit control panel, etc.).

Transmission Repetition Rate: On request

Data Length: variable

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 190 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64958 (0xFDBE)

Start Position	Length	Parameter Name	SPN
1	1 byte	Agency	3078
2	1 byte	Number of bytes in the Transit Assigned Route Identity	3071
3	1 byte	Number of bytes in the Transit Assigned Run Identity	3072
4	1 byte	Number of bytes in the Transit Assigned Block Identity	3073
5 to A	Variable - up to 100 characters	Transit Assigned Route Identity	3074
A+1 to B	Variable - up to 100 characters	Transit Assigned Run Identity	3075
B+1 to C	Variable - up to 100 characters	Transit Assigned Block Identity	3076

PGN 64959**Transit Milepost****- TR2**

Identification of a transit route milepost

Transmission Repetition Rate: On request

Data Length: variable

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 191 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64959 (0xFDBF)

Start Position	Length	Parameter Name	SPN
1	1 byte	Number of bytes in the Milepost Identification	3070
2 to n	Variable - up to 100 characters	Milepost Identification	509

PGN 64960**Passenger Counter****- TR7**

Used to notify the transit link devices of real-time boarding and exiting passengers or to indicate the total number of passengers on vehicle referenced to the last transit stop.

Also transmits information on the use status of the vehicle.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 192 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64960 (0xFDC0)

Start Position	Length	Parameter Name	SPN
1	8 bits	Type of Passenger Count	3043
2	1 byte	Patron Count	3047
3.1	2 bits	Silent Alarm Status	3044
3.3	2 bits	Vehicle Use Status	3045
3.5	2 bits	Transit Run Status	3046

PGN 64961 (R) Engine Fluid Level/Pressure 3**- EFL/P3**

3rd PGN which identifies parameters that are either measuring various pressures within the engine or identifying engine fluid levels

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 193 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64961 (0xFDC1)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Intake Valve Actuation System Oil Pressure	2948
3	1 byte	Engine Exhaust Gas Recirculation Inlet Pressure	3358

PGN 64964 Electronic Brake Controller 5**- EBC5**

Used for information on brake control.

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 196 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64964 (0xFDC4)

Start Position	Length	Parameter Name	SPN
1.3	3 bits	Halt brake mode	2913
1.6	3 bits	Hill holder mode	2912
2.1	2 bits	Foundation Brake Use	2919
2.3	2 bits	XBR System State	2917
2.5	4 bits	XBR Active Control Mode	2918
3	1 byte	XBR Acceleration Limit	2921

PGN 64965**ECU Identification Information****- ECUID**

Message for reporting identification and information about the physical ECU and its hardware, such as the ECU's part number, serial number, build date, etc. Information about the software within the ECU should be reported using the Software Identification PGN 65242 and/or DM19.

NOTE - The fields in this message are optional and separated by an ASCII "**". It is not necessary to include parametric data for all fields; however, the delimiter ("**") is always required. An ASCII "**" is required at the end of the last included field, even if there is only one ECU identification designator. Any additional ECU identification fields defined in the future will be appended at the end, each separated by an ASCII "**" as a delimiter.

Transmission Repetition Rate: On request

Data Length: Variable

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 197 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64965 (0xFDC5)

Start Position	Length	Parameter Name	SPN
a	Variable - up to 200 characters ("**" delimited)	ECU Part Number	2901
b	Variable - up to 200 characters ("**" delimited)	ECU Serial Number	2902
c	Variable - up to 200 characters ("**" delimited)	ECU Location	2903
d	Variable - up to 200 characters ("**" delimited)	ECU Type	2904

PGN 64966**Cold Start Aids**

-

Cold start aid information and settings.

Transmission Repetition Rate: As required
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 198 PGN Supporting Information:

1.1	2 bits	Engine Start Enable Device 1	626
1.3	2 bits	Engine Start Enable Device 2	1804
2.1	4 bits	Engine Start Enable Device 1 Configuration	2899
2.5	4 bits	Engine Start Enable Device 2 Configuration	2898

PGN 64967**Off-Highway Engine Control Selection States**

- OHCSS

Reports the states of off-highway engine control modes, as they apply to different modes of engine operation which may be used to aid particular working environments. These states provide the controls feedback for PGN 64971 which provides the operator inputs to the controller.

Transmission Repetition Rate: 0.5 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 253
 PDU Specific: 199 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 64967 (0xFDC7)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Engine Auxiliary Governor State	2896
1.3	2 bits	Engine Multi-Unit Sync State	2890
1.5	2 bits	Engine Alternate Low Idle Select State	2891
2	8 bits	Engine Alternate Rating Select State	2888
3.1	4 bits	Engine Alternate Droop Accelerator 1 Select State	2889
3.5	4 bits	Engine Alternate Droop Accelerator 2 Select State	2893
4.1	4 bits	Engine Alternate Droop Remote Accelerator Select State	2894
4.5	4 bits	Engine Alternate Droop Auxiliary Input Select State	2895

PGN 64968**Operator Primary Intermediate Speed Control state****- ISCS**

The Operator Primary Intermediate Speed Control State is used to provide the controller feedback to indicate the controls state achieved.

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 200 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64968 (0xFDC8)

Start Position	Length	Parameter Name	SPN
1.1	4 bits	Engine Operator Primary Intermediate Speed Select State	2892

PGN 64969**Electronic Control Module Information****- CMI**

Information relating to electronic control modules

Transmission Repetition Rate: As required

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 201 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 64969 (0xFDC9)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Total Count of Configuration Changes Made	2887

PGN 64970**Intermediate Speed Control****- ISC**

The Intermediate Speed Control is widely used in the Industrial application to control the engine to an intermediate speed setting which can bypass the accelerator position control. An example of this operation would be in an agricultural application where an external device is connected to an output shaft from the engine which must then be controlled to a constant speed. This is accomplished by activating a switch setting, thus eliminating the need for the operator to attempt to control this speed with the accelerator position.

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 202 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 64970 (0xFDCA)

Start Position	Length	Parameter Name	SPN
1.1	4 bits	Engine Operator Primary Intermediate Speed Select	2880

PGN 64971**Off-Highway Engine Control Selection****- OHECS**

Allows for the selection of off-highway engine control modes, as they apply to different modes of engine operation which may be used to aid particular working environments. By offering characteristics suitable for the work in hand, the operator may select the desired mode (e.g. economy fuel ratings, droop settings, alternate idle points, multiple engine synchronization, etc.) to maximize performance under given conditions. The operator selects these inputs via hardware switch operation, whereby an overall system control communicates the information to the engine controller.

Transmission Repetition Rate: 500 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

5-6	2 bytes	Engine Exhaust Gas Recirculation (EGR) Valve Control	2791
7.1	2 bits	Engine Variable Geometry Turbocharger (VGT) Air Control Shutoff Valve	2792
8	1 byte	Engine Variable Geometry Turbocharger (VGT) 1 Actuator Position	2795

PGN 64982**Basic Joystick Message 1****- BJM1**

Used to transfer information about the measured status of the 1st 2 axes and up to 12 buttons of a joystick. Additional handle information is available in the Expanded Joystick Message.

10-bit position parameters are broadcast over 2 bytes. The eight most significant bits are transmitted in the second byte, with the most significant bit at bit 8. The two least significant bits are transmitted in the first byte in bit positions 7 and 8, with the most significant of the two bits at bit 8.

10-bit position SPN	Location in PGN	
Bit 10	Byte n	Bit 8
Bit 9		Bit 7
Bit 8		Bit 6
Bit 7		Bit 5
Bit 6		Bit 4
Bit 5		Bit 3
Bit 4		Bit 2
Bit 3		Bit 1
Bit 2	Byte (n-1)	Bit 8
Bit 1		Bit 7

Transmission Repetition Rate: 100 ms or on change, not to exceed 20 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 253

PDU Specific: 214 PGN Supporting Information:

Default Priority: 3

Parameter Group Number: 64982 (0xFDD6)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Joystick 1 X-Axis Neutral Position Status	2675
1.3	2 bits	Joystick 1 X-Axis Lever Left Negative Position Status	2670
1.5	2 bits	Joystick 1 X-Axis Lever Right Positive Position Status	2665
1.7-2	10 bits	Joystick 1 X-Axis Position	2660
3.1	2 bits	Joystick 1 Y-Axis Neutral Position Status	2676
3.3	2 bits	Joystick 1 Y-Axis Lever Back Negative Position Status	2671
3.5	2 bits	Joystick 1 Y-Axis Lever Forward Positive Position Status	2666
3.7-4	10 bits	Joystick 1 Y-Axis Position	2661
5.5	2 bits	Joystick 1 Y-Axis Detent Position Status	2681
5.7	2 bits	Joystick 1 X-Axis Detent Position Status	2680
6.1	2 bits	Joystick 1 Button 4 Pressed Status	2688
6.3	2 bits	Joystick 1 Button 3 Pressed Status	2687
6.5	2 bits	Joystick 1 Button 2 Pressed Status	2686
6.7	2 bits	Joystick 1 Button 1 Pressed Status	2685
7.1	2 bits	Joystick 1 Button 8 Pressed Status	2692
7.3	2 bits	Joystick 1 Button 7 Pressed Status	2691
7.5	2 bits	Joystick 1 Button 6 Pressed Status	2690
7.7	2 bits	Joystick 1 Button 5 Pressed Status	2689
8.1	2 bits	Joystick 1 Button 12 Pressed Status	2696
8.3	2 bits	Joystick 1 Button 11 Pressed Status	2695
8.5	2 bits	Joystick 1 Button 10 Pressed Status	2694
8.7	2 bits	Joystick 1 Button 9 Pressed Status	2693

PGN 64983**Extended Joystick Message 1****- EJM1**

Used to transfer information about the measured status of three additional axes of a joystick and switches of the joystick grip or handle. The joystick axial motion information is available in the Basic Joystick Message.

10-bit position parameters are broadcast over 2 bytes. The eight most significant bits are transmitted in the second byte, with the most significant bit at bit 8. The two least significant bits are transmitted in the first byte in bit positions 7 and 8, with the most significant of the two bits at bit 8.

10-bit position SPN	Location in PGN
Bit 10	Byte n Bit 8
Bit 9	Bit 7
Bit 8	Bit 6
Bit 7	Bit 5
Bit 6	Bit 4
Bit 5	Bit 3
Bit 4	Bit 2
Bit 3	Bit 1
Bit 2	Byte (n-1) Bit 8
Bit 1	Bit 7

Note: The term Grip used here simply refers to another set of axes separate from the previously mentioned X and Y Axis. This additional set of axes could in some cases be grip mounted sensors as opposed to the sensors mounted at the base of the handle.

PGN 65088**Lighting Data****- LD**

This lighting message is a response to the request for lighting data in the lighting command message. Each lighting controller on the tractor and attached implements must transmit this message to the Tractor ECU when requested. The tractor will use this information to determine which lighting systems are functioning. Lighting controllers that have lamp sensing capability will also report failed light bulbs. This is a legal requirement in many areas.

See PGN 65089 for the lighting command message.

Transmission Repetition Rate: As requested.

PGN 65089**Lighting Command****- LC**

The lighting command message has been defined as a global message from the tractor to all lighting controllers on the tractor and attached implements. Separate messages are provided for tractor and implement work and driving lights. Additional commands have been provided for 3 optional lights on implements to meet the needs of specialty equipment. Common marking and signaling messages are provided.

This message is used to control the state of all lighting functions. The lighting command message shall be sent on each change of state of a lamp. The state values indicate the lights is to be turned ON or OFF. Flashing is accomplished by sending the lighting message with the state alternately ON or OFF. A lighting command message must be sent at least once per second. It is the responsibility of the tractor designer to provide the correct combination of lamp commands to meet local legislative directives.

See PGN 65088 for the message to provide feedback for this command message.

Transmission Repetition Rate: On change of lamp on/ off state. Maximum period of 1 second between messages. No greater than 10 messages per second for all lights.

1.5	2 bits	Convoy Lamp Select	1838
1.7	2 bits	Convoy Driving Lamp Select	1837
3.7	2 bits	Black Out Brake/Stop Lamp Select	1841
4.1	2 bits	Night Vision Illuminator Select	1843
4.7	2 bits	Black Out Work Lamp Select	1842
8	1 byte	Operators Black Out Intensity Selection	1844

PGN 65101**Total Averaged Information****- TAVG**

Averages of information accumulated over the life of the engine

Transmission Repetition Rate: On request
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 77 PGN Supporting Information:
 Default Priority: 7
 Parameter Group Number: 65101 (0xFE4D)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Total Average Fuel Rate	1834
3-4	2 bytes	Engine Total Average Fuel Economy	1835

PGN 65102**(R)****Door Control 1****- DC1**

Used for door information.

Transmission Repetition Rate: 100 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 78 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65102 (0xFE4E)

Start Position	Length	Parameter Name	SPN
1.1	4 bits	Position of doors	1821
1.5	2 bits	Ramp / Wheel Chair Lift Position	1820
1.7	2 bits	Status 2 of doors	3411

PGN 65103**Vehicle Dynamic Stability Control 1****- VDC1**

Contains information which relates to the VDC system status.

Transmission Repetition Rate: 100ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 79 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65103 (0xFE4F)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	VDC Information Signal	1813
1.3	2 bits	VDC Fully Operational	1814
1.5	2 bits	VDC brake light request	1815
2.1	2 bits	ROP Engine Control active	1816
2.3	2 bits	ROP Brake Control active	1818
2.5	2 bits	YC Engine Control active	1817
2.7	2 bits	YC Brake Control active	1819

PGN 65104**Battery Temperature****- BT1**

Contains battery temperature information.

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 80 PGN Supporting Information: See Appendix D - PGN 65104

Default Priority: 6

Parameter Group Number: 65104 (0xFE50)

Start Position	Length	Parameter Name	SPN
1	1 byte	Battery 1 Temperature	1800
2	1 byte	Battery 2 Temperature	1801

PGN 65105**Adaptive Cruise Control, Operator Input****- ACC2**

The operator requested characteristics for the ACC systems operation.

Transmission Repetition Rate: 250 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 81 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65105 (0xFE51)

Start Position	Length	Parameter Name	SPN
1.6	3 bits	Requested ACC Distance Mode	1799

PGN 65106**Vehicle Electrical Power #3****- VEP3**

This contains high resolution/range parameters reported from the alternator or power generation components.

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 82 PGN Supporting Information: See Appendix D - PGN 65104

Default Priority: 6

Parameter Group Number: 65106 (0xFE52)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Alternator Current (High Range/Resolution)	1795
3-4	2 bytes	Net Battery Current (High Range/Resolution)	2579

PGN 65107**Retarder Continuous Torque & Speed Limit****- RTC1**

Transmission Repetition Rate: 5 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 83 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65107 (0xFE53)

Start Position	Length	Parameter Name	SPN
1	1 byte	Low Limit Threshold for Maximum RPM from Retarder	1776
2	1 byte	High Limit Threshold for Minimum Continuous RPM from Retarder	1777
3	1 byte	Low Limit Threshold for Maximum Torque from Retarder	1778
4	1 byte	High Limit Threshold for Minimum Continuous Torque from Retarder	1779
5	1 byte	Maximum Continuous Retarder Speed	1780
6	1 byte	Minimum Continuous Retarder Speed	1781
7	1 byte	Maximum Continuous Retarder Torque	1782
8	1 byte	Minimum Continuous Retarder Torque	1783

PGN 65108**Engine Continuous Torque & Speed Limit****- ECT1**

Transmission Repetition Rate: 5 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 84 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65108 (0xFE54)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Low Limit Threshold for Maximum RPM from Engine	1768
2	1 byte	Engine High Limit Threshold for Minimum Continuous Engine RPM	1769
3	1 byte	Engine Low Limit Threshold for Maximum Torque from Engine	1770
4	1 byte	Engine High Limit Threshold for Minimum Continuous Torque from Engine	1771
5	1 byte	Engine Maximum Continuous RPM	1772
6	1 byte	Engine Minimum Continuous RPM	1773
7	1 byte	Engine Maximum Continuous Torque	1774
8	1 byte	Engine Minimum Continuous Torque	1775

PGN 65109***Gaseous Fuel Properties*****- GFD**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 85 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65109 (0xFE55)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Specific Heat Ratio	1767

PGN 65110 (R) Tank Information 1**- T11**

Contains information on various tank levels

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 86 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65110 (0xFE56)

Start Position	Length	Parameter Name	SPN
1	1 byte	Catalyst Tank Level	1761
2	1 byte	Catalyst Tank Temperature	3031
3-4	2 bytes	Catalyst Tank Level 2	3517
5.1	5 bits	Catalyst Tank Level Preliminary FMI	3532

PGN 65111 Air Suspension Control 5**- ASC5**

Used for damper stiffness information

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 87 PGN Supporting Information:

Default Priority: 3

Parameter Group Number: 65111 (0xFE57)

Start Position	Length	Parameter Name	SPN
1	1 byte	Damper Stiffness Front Axle	1729
2	1 byte	Damper Stiffness Rear Axle	1730
3	1 byte	Damper Stiffness Lift / Tag Axle	1731
4.1	2 bits	Electronic Shock Absorber Control Mode - Front Axle	1833
4.3	2 bits	Electronic Shock Absorber Control Mode - Rear Axle	1832
4.5	2 bits	Electronic Shock Absorber Control Mode - Lift/Tag Axle	1831

PGN 65112***Air Suspension Control 4*****- ASC4**

Used for bellow pressure information

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 88 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65112 (0xFE58)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Bellow Pressure Front Axle Left	1725
3-4	2 bytes	Bellow Pressure Front Axle Right	1726
5-6	2 bytes	Bellow Pressure Rear Axle Left	1727
7-8	2 bytes	Bellow Pressure Rear Axle Right	1728

PGN 65113***Air Suspension Control 3*****- ASC3**

Used for height information

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 89 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65113 (0xFE59)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Relative Level Front Axle Left	1721
3-4	2 bytes	Relative Level Front Axle Right	1722
5-6	2 bytes	Relative Level Rear Axle Left	1724
7-8	2 bytes	Relative Level Rear Axle Right	1723

PGN 65114**Air Suspension Control 1****- ASC1**

Used for suspension control information

Transmission Repetition Rate: 100 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 90 PGN Supporting Information:
 Default Priority: 3
 Parameter Group Number: 65114 (0xFE5A)

Default Priority: 6

Parameter Group Number: 65127 (0xFE67)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Auxiliary Heater Maximum Output Power	1690

PGN 65128**Vehicle Fluids****- VF**

Transmission Repetition Rate: 1 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 104 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65128 (0xFE68)

Start Position	Length	Parameter Name	SPN
1	1 byte	Hydraulic Temperature	1638
2.1	2 bits	Hydraulic Oil Filter Restriction Switch	1713
2.3	2 bits	Winch Oil Pressure Switch	1857
3	1 byte	Hydraulic Oil Level	2602

PGN 65129 (R) Engine Temperature 3**- ET3**

This parameter group is used to transit high resolution engine temperatures for control purposes.

Transmission Repetition Rate: 1 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 105 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65129 (0xFE69)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Intake Manifold 1 Air Temperature (High Resolution)	1636
3-4	2 bytes	Engine Coolant Temperature (High Resolution)	1637
5-6	2 bytes	Engine Intake Valve Actuation System Oil Temperature	2986
7-8	2 bytes	Engine Charge Air Cooler Outlet Temperature	2630

PGN 65130 (R) Engine Fuel/lube systems**- EFS**

Transmission Repetition Rate: 0.5 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 106 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65130 (0xFE6A)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Oil Level Remote Reservoir	1380
2	1 byte	Engine Fuel Supply Pump Inlet Pressure	1381
3	1 byte	Engine Fuel Filter (suction side) Differential Pressure	1382

PGN 65131 Driver's Identification**- DI**

Field:

a Driver 1 Identification

Delimiter (ASCII "**")

b Driver 2 Identification

Delimiter (ASCII "**")

NOTE - If only driver card 1 is present, only the parameter driver 1 identification and two delimiters shall be transmitted. If only driver card 2 is present, a delimiter followed by parameter driver 2 identification and the second delimiter shall be transmitted. If no driver cards are present, only the two delimiters shall be sent.

Transmission Repetition Rate: On request

Data Length: Variable

Extended Data Page: 0

Data Page: 0

Default Priority: 6

Parameter Group Number: 65131 (0xFE6B)

Start Position	Length	Parameter Name	SPN
1-2	Variable ("**" delimited)	Driver 1 identification	1625
3-4	Variable ("**" delimited)	Driver 2 identification	1626

PGN 65132***Tachograph*****- TCO1**

Transmission Repetition Rate: 50 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 108 PGN Supporting Information:
 Default Priority: 3
 Parameter Group Number: 65132 (0xFE6C)

Start Position	Length	Parameter Name	SPN
1.1	3 bits	Driver 1 working state	1612
1.4	3 bits	Driver 2 working state	1613
1.7	2 bits	Vehicle motion	1611
2.1	4 bits	Driver 1 Time Related States	1617
2.5	2 bits	Driver card, driver 1	1615
2.7	2 bits	Vehicle Overspeed	1614
3.1	4 bits	Driver 2 Time Related States	1618
3.5	2 bits	Driver card, driver 2	1616
4.1	2 bits	System event	1622
4.3	2 bits	Handling information	1621
4.5	2 bits	Tachograph performance	1620
4.7	2 bits	Direction indicator	1619
5-6	2 bytes	Tachograph output shaft speed	1623
7-8	2 bytes	Tachograph vehicle speed	1624

PGN 65133***Heater Information*****- HTR**

Transmission Repetition Rate: 1 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 109 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65133 (0xFE6D)

Start Position	Length	Parameter Name	SPN
1	1 byte	Auxiliary Heater Output Coolant Temperature	1687
2	1 byte	Auxiliary Heater Input Air Temperature	1688
3	1 byte	Auxiliary Heater Output Power Percent	1689
4.1	4 bits	Auxiliary Heater Mode	1677
5.1	2 bits	Auxiliary Heater Water Pump Status	1676
5.3	2 bits	Cab Ventilation	1678
5.5	2 bits	Engine Heating Zone	1679
5.7	2 bits	Cab Heating Zone	1680

PGN 65134**High Resolution Wheel Speed****- HRW**

Transmission Repetition Rate: 20 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 110 PGN Supporting Information:

Default Priority: 2

Parameter Group Number: 65134 (0xFE6E)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Front Axle, Left Wheel Speed	1592
3-4	2 bytes	Front axle, right wheel speed	1593
5-6	2 bytes	Rear axle, left wheel speed	1594
7-8	2 bytes	Rear axle, right wheel speed	1595

PGN 65135**Adaptive Cruise Control****- ACC1**

NOTE—The ACC1 message is required whenever the engine is running and ACC is powered on and not faulted. The timeout for ACC1 message will be between 2.5 times to 5 times the update rate.

The ACC1 message is intended primarily for engines and driver display units. The receiving device should identify the ACC device based on ACC function value of 32 (headway controller) or source address of 42 (headway controller).

In the event that the engine is running, the ACC is installed and the ACC1 message is not present, the engine will disable cruise control and return to non-cruise mode; also, the driver display unit will notify the driver that ACC operation is no longer available. In addition to the ACC1 timeout, engine cruise control will also be disabled if parameter "Adaptive Cruise Control State" in ACC1 is 110b (ACC disabled or in error). In some cases, it may be possible for the driver to restart cruise control (without ACC capability) during ACC/J1939 fault by performing a reset function. See Figure PGN65135_A.

It is possible that engines and driver display units may require calibration settings in order to know if the present vehicle configuration includes an ACC system or not. A calibration setting may also be needed for defining the driver reset function.

Transmission Repetition Rate:	100 ms

PDU Format: 254

PDU Specific: 123 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65147 (0xFE7B)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #1 Combustion Time	1444
3-4	2 bytes	Engine Cylinder #2 Combustion Time	1445
5-6	2 bytes	Engine Cylinder #3 Combustion Time	1446
7-8	2 bytes	Engine Cylinder #4 Combustion Time	1447

PGN 65148**Combustion Time 2****- CT2**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 124 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65148 (0xFE7C)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #5 Combustion Time	1448
3-4	2 bytes	Engine Cylinder #6 Combustion Time	1449
5-6	2 bytes	Engine Cylinder #7 Combustion Time	1450
7-8	2 bytes	Engine Cylinder #8 Combustion Time	1451

PGN 65149**Combustion Time 3****- CT3**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 125 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65149 (0xFE7D)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #9 Combustion Time	1452
3-4	2 bytes	Engine Cylinder #10 Combustion Time	1453
5-6	2 bytes	Engine Cylinder #11 Combustion Time	1454
7-8	2 bytes	Engine Cylinder #12 Combustion Time	1455

PGN 65150**Combustion Time 4****- CT4**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 126 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65150 (0xFE7E)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #13 Combustion Time	1456
3-4	2 bytes	Engine Cylinder #14 Combustion Time	1457
5-6	2 bytes	Engine Cylinder #15 Combustion Time	1458
7-8	2 bytes	Engine Cylinder #16 Combustion Time	1459

PGN 65151**Combustion Time 5****- CT5**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 127 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65151 (0xFE7F)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #17 Combustion Time	1460
3-4	2 bytes	Engine Cylinder #18 Combustion Time	1461
5-6	2 bytes	Engine Cylinder #19 Combustion Time	1462
7-8	2 bytes	Engine Cylinder #20 Combustion Time	1463

PGN 65152**Combustion Time 6****- CT6**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 128 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65152 (0xFE80)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Desired Combustion Time	1464
3-4	2 bytes	Engine Average Combustion Time	1465

PGN 65153**Fuel Information 2 (Gaseous)****- GF12**

Gaseous fuel information 2

Transmission Repetition Rate: On request
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 129 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65153 (0xFE81)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Fuel Flow Rate 1	1440
3-4	2 bytes	Engine Fuel Flow Rate 2	1441
5	1 byte	Engine Fuel Valve 1 Position	1442
6	1 byte	Engine Fuel Valve 2 Position	1443
7	1 byte	Engine Requested Fuel Valve 1 Position	1765
8	1 byte	Engine Requested Fuel Valve 2 Position	1766

PGN 65154**Ignition Timing 1****- IT1**

Transmission Repetition Rate: On request
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 130 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65154 (0xFE82)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #1 Ignition Timing	1413
3-4	2 bytes	Engine Cylinder #2 Ignition Timing	1414
5-6	2 bytes	Engine Cylinder #3 Ignition Timing	1415
7-8	2 bytes	Engine Cylinder #4 Ignition Timing	1416

PGN 65155**Ignition Timing 2****- IT2**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 131 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65155 (0xFE83)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #5 Ignition Timing	1417
3-4	2 bytes	Engine Cylinder #6 Ignition Timing	1418
5-6	2 bytes	Engine Cylinder #7 Ignition Timing	1419
7-8	2 bytes	Engine Cylinder #8 Ignition Timing	1420

PGN 65156**Ignition Timing 3****- IT3**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 132 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65156 (0xFE84)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #9 Ignition Timing	1421
3-4	2 bytes	Engine Cylinder #10 Ignition Timing	1422
5-6	2 bytes	Engine Cylinder #11 Ignition Timing	1423
7-8	2 bytes	Engine Cylinder #12 Ignition Timing	1424

PGN 65157**Ignition Timing 4****- IT4**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 133 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65157 (0xFE85)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #13 Ignition Timing	1425
3-4	2 bytes	Engine Cylinder #14 Ignition Timing	1426
5-6	2 bytes	Engine Cylinder #15 Ignition Timing	1427
7-8	2 bytes	Engine Cylinder #16 Ignition Timing	1428

PGN 65158**Ignition Timing 5****- IT5**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 134 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65158 (0xFE86)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Cylinder #17 Ignition Timing	1429
3-4	2 bytes	Engine Cylinder #18 Ignition Timing	1430
5-6	2 bytes	Engine Cylinder #19 Ignition Timing	1431
7-8	2 bytes	Engine Cylinder #20 Ignition Timing	1432

PGN 65159**Ignition Timing 6****- IT6**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 135 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65159 (0xFE87)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Desired Ignition Timing #1	1433
3-4	2 bytes	Engine Desired Ignition Timing #2	1434
5-6	2 bytes	Engine Desired Ignition Timing #3	1435
7-8	2 bytes	Engine Actual Ignition Timing	1436

PGN 65160**Ignition Transformer Secondary Output 1****- ISO1**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 136 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65160 (0xFE88)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Cylinder #1 Ignition Transformer Secondary Output	1393
2	1 byte	Engine Cylinder #2 Ignition Transformer Secondary Output	1394
3	1 byte	Engine Cylinder #3 Ignition Transformer Secondary Output	1395
4	1 byte	Engine Cylinder #4 Ignition Transformer Secondary Output	1396
5	1 byte	Engine Cylinder #5 Ignition Transformer Secondary Output	1397
6	1 byte	Engine Cylinder #6 Ignition Transformer Secondary Output	1398
7	1 byte	Engine Cylinder #7 Ignition Transformer Secondary Output	1399
8	1 byte	Engine Cylinder #8 Ignition Transformer Secondary Output	1400

PGN 65161**Ignition Transformer Secondary Output 2****- ISO2**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 137 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65161 (0xFE89)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Cylinder #9 Ignition Transformer Secondary Output	1401
2	1 byte	Engine Cylinder #10 Ignition Transformer Secondary Output	1402
3	1 byte	Engine Cylinder #11 Ignition Transformer Secondary Output	1403
4	1 byte	Engine Cylinder #12 Ignition Transformer Secondary Output	1404
5	1 byte	Engine Cylinder #13 Ignition Transformer Secondary Output	1405
6	1 byte	Engine Cylinder #14 Ignition Transformer Secondary Output	1406
7	1 byte	Engine Cylinder #15 Ignition Transformer Secondary Output	1407
8	1 byte	Engine Cylinder #16 Ignition Transformer Secondary Output	1408

PGN 65162**Ignition Transformer Secondary Output 3****- ISO3**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 138 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65162 (0xFE8A)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Cylinder #17 Ignition Transformer Secondary Output	1409
2	1 byte	Engine Cylinder #18 Ignition Transformer Secondary Output	1410
3	1 byte	Engine Cylinder #19 Ignition Transformer Secondary Output	1411
4	1 byte	Engine Cylinder #20 Ignition Transformer Secondary Output	1412

PGN 65163 (R) Gaseous Fuel Pressure - GFP

Transmission Repetition Rate: On request
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 139 PGN Supporting Information: See Appendix D - PGN 65163
 Default Priority: 7
 Parameter Group Number: 65163 (0xFE8B)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Fuel Valve 1 Inlet Absolute Pressure	1390
3-4	2 bytes	Engine Fuel Valve Differential Pressure	1391
5-6	2 bytes	Engine Air to Fuel Differential Pressure	1392
7-8	2 bytes	Engine Fuel Valve 1 Outlet Absolute Pressure	2980

PGN 65164 Auxiliary Analog Information - AAI**Auxiliary Analog Information**

Transmission Repetition Rate: On request
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 140 PGN Supporting Information:
 Default Priority: 7
 Parameter Group Number: 65164 (0xFE8C)

Start Position	Length	Parameter Name	SPN
1	1 byte	Auxiliary Temperature 1	441
2	1 byte	Auxiliary Temperature 2	442
3	1 byte	Auxiliary Pressure #1	1387
4	1 byte	Auxiliary Pressure #2	1388
5-6	2 bytes	Auxiliary Level	3087

PGN 65165**Vehicle Electrical Power #2****- VEP2**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 141 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65165 (0xFE8D)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Battery 2 Potential (Voltage)	444

PGN 65166**Service 2****- S2**

NOTE - There are two acceptable formats for the Service PGN. Format 1 has only 8 bytes of data and reports the component most in need of service for each of the three categories. Format 2, however, uses the transport layer as necessary in order to repeat these 8 bytes of service component information until all supported service components in each category have been transmitted.

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 142 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65166 (0xFE8E)

Start Position	Length	Parameter Name	SPN
1	1 byte	Service Component Identification	1379
2-3	2 bytes	Time Since Last Service	1350

PGN 65167**Supply Pressure 2****- SP2**

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 143 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65167 (0xFE8F)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine External Shutdown Air Supply Pressure	1320

PGN 65168**Engine Torque History****- ETH**

NOTE - The torque history PGN is variable in length and may contain up to 125 torque history records. Each torque history record MUST BE 38 bytes in length. Any unused bytes must be 0xFF.

The last six bytes of each record are not currently defined and shall be transmitted as "not available" (0xff). In the first record, these are byte positions 34-39.

Transmission Repetition Rate: On request

Data Length: Variable

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 144 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65168 (0xFE90)

Start Position	Length	Parameter Name	SPN
01	1 byte	Number of Engine Torque History Records	1246
02-03	2 bytes	Engine Power	1247
04-05	2 bytes	Engine Peak Torque 1	1248
06-07	2 bytes	Engine Peak Torque 2	1249
08	1 byte	Calibration Record Start Month	1250
09	1 byte	Calibration Record Start Day	1251
10	1 byte	Calibration Record Start Year	1252
11-14	4 bytes	Calibration Record Duration Time	1253
15.1	2 bits	Torque Limiting Feature Status	1254
15.3	3 bits	Engine Torque Limit Feature	1632
16-17	2 bytes	Transmission Gear Ratio 1	1255
18-19	2 bytes	Engine Torque Limit 1, Transmission	1256
20-21	2 bytes	Transmission Gear Ratio 2	1257
22-23	2 bytes	Engine Torque Limit 2, Transmission	1258
24-25	2 bytes	Transmission Gear Ratio 3	1259
26-27	2 bytes	Engine Torque Limit 3, Transmission	1260
28-29	2 bytes	Engine Torque Limit 4, Transmission	1261
30-31	2 bytes	Engine Torque Limit 5, Switch	1262
32-33	2 bytes	Engine Torque Limit 6, Axle Input	1263

PGN 65169**Fuel Leakage****- FL**

Transmission Repetition Rate: 1 s
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 145 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65169 (0xFE91)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Engine Fuel Leakage 1	1239
1.3	2 bits	Engine Fuel Leakage 2	1240

PGN 65170**Engine Information****- EI**

Transmission Repetition Rate: 100 ms
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 146 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65170 (0xFE92)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Pre-filter Oil Pressure	1208
2-3	2 bytes	Engine Exhaust Gas Pressure	1209
4	1 byte	Engine Fuel Rack Position	1210
5-6	2 bytes	Engine Gas Mass Flow Rate 1	1241
7-8	2 bytes	Instantaneous Estimated Brake Power	1242

PGN 65171**Engine Electrical System/Module Information****- EES**

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 147 PGN Supporting Information: See Appendix D - PGN 65104

Default Priority: 7

Parameter Group Number: 65171 (0xFE93)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Electrical Load	1204
3.1	2 bits	Safety Wire Status	1205

PGN 65172**Engine Auxiliary Coolant****- EAC**

Transmission Repetition Rate: 0.5 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 148 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65172 (0xFE94)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Auxiliary Coolant Pressure	1203
2	1 byte	Engine Auxiliary Coolant Temperature	1212
3	1 byte	Sea Water Pump Outlet Pressure	2435

PGN 65173**Rebuild Information****- RBI**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 149 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65173 (0xFE95)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Engine Operation Time Since Rebuild	1193

PGN 65174**Turbocharger Wastegate****- TCW**

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 150 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65174 (0xFE96)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Turbocharger 1 Wastegate Drive	1188
2	1 byte	Engine Turbocharger 2 Wastegate Drive	1189
3	1 byte	Engine Turbocharger 3 Wastegate Drive	1190
4	1 byte	Engine Turbocharger 4 Wastegate Drive	1191
5	1 byte	Engine Turbocharger Wastegate Actuator Control Air Pressure	1192

PGN 65175***Turbocharger Information 5*****- TCI5**

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 151 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65175 (0xFE97)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Turbocharger 1 Turbine Outlet Temperature	1184
3-4	2 bytes	Engine Turbocharger 2 Turbine Outlet Temperature	1185
5-6	2 bytes	Engine Turbocharger 3 Turbine Outlet Temperature	1186
7-8	2 bytes	Engine Turbocharger 4 Turbine Outlet Temperature	1187

PGN 65176***Turbocharger Information 4*****- TCI4**

Parameter Group Number: 65186 (0xFE A2)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Exhaust Gas Port 5 Temperature	1141
3-4	2 bytes	Engine Exhaust Gas Port 6 Temperature	1142
5-6	2 bytes	Engine Exhaust Gas Port 7 Temperature	1143
7-8	2 bytes	Engine Exhaust Gas Port 8 Temperature	1144

PGN 65187**Exhaust Port Temperature 1****- EPT1**

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 163 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65187 (0xFE A3)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Exhaust Gas Port 1 Temperature	1137
3-4	2 bytes	Engine Exhaust Gas Port 2 Temperature	1138
5-6	2 bytes	Engine Exhaust Gas Port 3 Temperature	1139
7-8	2 bytes	Engine Exhaust Gas Port 4 Temperature	1140

PGN 65188**Engine Temperature 2****- ET2**

Transmission Repetition Rate: 1s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 164 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65188 (0xFE A4)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Oil Temperature 2	1135
3-4	2 bytes	Engine ECU Temperature	1136
5-6	2 bytes	Engine Exhaust Gas Recirculation Differential Pressure	411
7-8	2 bytes	Engine Exhaust Gas Recirculation Temperature	412

PGN 65189**Intake Manifold Information 2****- IMT2**

Transmission Repetition Rate: 1 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 165 PGN Supporting Information:
 Default Priority: 7
 Parameter Group Number: 65189 (0xFE5)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Intake Manifold 2 Temperature	1131
2	1 byte	Engine Intake Manifold 3 Temperature	1132
3	1 byte	Engine Intake Manifold 4 Temperature	1133
4	1 byte	Engine Intake Manifold 5 Temperature	1802
5	1 byte	Engine Intake Manifold 6 Temperature	1803

PGN 65190**Intake Manifold Information 1****- IMT1**

Transmission Repetition Rate: 0.5 s
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 166 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65190 (0xFE6)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Turbocharger 1 Boost Pressure	1127
3-4	2 bytes	Engine Turbocharger 2 Boost Pressure	1128
5-6	2 bytes	Engine Turbocharger 3 Boost Pressure	1129
7-8	2 bytes	Engine Turbocharger 4 Boost Pressure	1130

PGN 65191**Alternator Temperature****- AT**

Transmission Repetition Rate: 1 s
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 167 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65191 (0xFE7)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Alternator Bearing 1 Temperature	1122
2	1 byte	Engine Alternator Bearing 2 Temperature	1123
3	1 byte	Engine Alternator Winding 1 Temperature	1124
4	1 byte	Engine Alternator Winding 2 Temperature	1125
5	1 byte	Engine Alternator Winding 3 Temperature	1126

PGN 65192**Articulation Control****- AC**

Transmission Repetition Rate: On request
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 168 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65192 (0xFE8)

Start Position	Length	Parameter Name	SPN
1	1 byte	Articulation Angle	1120

PGN 65193**Exhaust Oxygen 1****- E01**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 169 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65193 (0xFEAA9)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Desired Rated Exhaust Oxygen	1117
3-4	2 bytes	Engine Desired Exhaust Oxygen	1118
5-6	2 bytes	Engine Actual Exhaust Oxygen	1119
7	1 byte	Engine Exhaust Gas Oxygen Sensor Fueling Correction	1695
8.7	2 bits	Engine Exhaust Gas Oxygen Sensor Closed Loop Operation	1696

PGN 65194**Alternate Fuel 2****- AF2**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 170 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65194 (0xFEAA)

Start Position	Length	Parameter Name	SPN
1	1 byte	Engine Gaseous Fuel Correction Factor	1116
2-3	2 bytes	Engine Desired Absolute Intake Manifold Pressure (Turbo Boost Limit)	1692
4	1 byte	Engine Turbocharger Wastegate Valve Position	1693
5	1 byte	Engine Gas Mass Flow Sensor Fueling Correction	1694

PGN 65195**Electronic Transmission Controller 6****- ETC6**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 171 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65195 (0xFEAB)

Start Position	Length	Parameter Name	SPN
1	1 byte	Recommended Gear	1113
2	1 byte	Highest Possible Gear	1115
3	1 byte	Lowest Possible Gear	1114
4	1 byte	Clutch Life Remaining	2983

PGN 65196**Wheel Brake Lining Remaining Information****- EBC4**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 172 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65196 (0xFEAC)

Start Position	Length	Parameter Name	SPN
1	1 byte	Brake Lining Remaining, Front Axle, Left Wheel	1099
2	1 byte	Brake Lining Remaining, Front Axle, Right Wheel	1100
3	1 byte	Brake Lining Remaining, Rear Axle #1, Left Wheel	1101
4	1 byte	Brake Lining Remaining, Rear Axle #1, Right Wheel	1102
5	1 byte	Brake Lining Remaining, Rear Axle #2, Left Wheel	1103
6	1 byte	Brake Lining Remaining, Rear Axle #2, Right Wheel	1104
7	1 byte	Brake Lining Remaining, Rear Axle #3, Left Wheel	1105
8	1 byte	Brake Lining Remaining, Rear Axle #3, Right Wheel	1106

PGN 65197**Wheel Application Pressure High Range Information****- EBC3**

Transmission Repetition Rate: 100 ms
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 173 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65197 (0xFEAD)

Start Position	Length	Parameter Name	SPN
1	1 byte	Brake Application Pressure High Range, Front Axle, Left Wheel	1091
2	1 byte	Brake Application Pressure High Range, Front Axle, Right Wheel	1092
3	1 byte	Brake Application Pressure High Range, Rear Axle #1, Left Wheel	1093
4	1 byte	Brake Application Pressure High Range, Rear Axle #1, Right Wheel	1094
5	1 byte	Brake Application Pressure High Range, Rear Axle #2, Left Wheel	1095
6	1 byte	Brake Application Pressure High Range, Rear Axle #2, Right Wheel	1096
7	1 byte	Brake Application Pressure High Range, Rear Axle #3, Left Wheel	1097
8	1 byte	Brake Application Pressure High Range, Rear Axle #3, Right Wheel	1098

PGN 65198 (R) Air Supply Pressure**- AIR1**

Air Supply Pressure

Transmission Repetition Rate: 1 sec
 Data Length: 8
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 174 PGN Supporting Information:
 Default Priority: 6
 Parameter Group Number: 65198 (0xFEAE)

Start Position	Length	Parameter Name	SPN
1	1 byte	Pneumatic Supply Pressure	46
2	1 byte	Parking and/or Trailer Air Pressure	1086
3	1 byte	Service Brake Air Pressure Circuit #1	1087
4	1 byte	Service Brake Air Pressure Circuit #2	1088
5	1 byte	Auxiliary Equipment Supply Pressure	1089
6	1 byte	Air Suspension Supply Pressure	1090
7.1	2 bits	Air Compressor Status	1351

PGN 65199**Fuel Consumption (Gaseous)****- GFC**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 175 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65199 (0xFEAF)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Trip Fuel (Gaseous)	1039
5-8	4 bytes	Total Fuel Used (Gaseous)	1040

PGN 65200**Trip Time Information 2****- TT12**

Transmission Repetition Rate: On request

Data Length: 20

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 176 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65200 (0xFEB0)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Trip Cruise Time	1034
05-08	4 bytes	Trip PTO Time	1035
09-12	4 bytes	Trip Engine Running Time	1036
13-16	4 bytes	Trip Idle Time	1037
17-20	4 bytes	Trip Air Compressor On Time	1038

PGN 65201**ECU History****- EH**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 177 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65201 (0xFEB1)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Total ECU Distance	1032
5-8	4 bytes	Total ECU Run Time	1033

PGN 65202**Fuel Information 1 (Gaseous)****- GF11**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 178 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65202 (0xFEB2)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Total Engine PTO Fuel Used (Gaseous)	1030
5-6	2 bytes	Trip Average Fuel Rate (Gaseous)	1031
7-8	2 bytes	Engine Fuel Specific Gravity	1389

PGN 65203**Fuel Information (Liquid)****- LFI**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 179 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65203 (0xFEB3)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Total Engine PTO Fuel Used	1028
5-6	2 bytes	Trip Average Fuel Rate	1029

PGN 65204**Trip Time Information 1****- TT11**

Transmission Repetition Rate: On request

Data Length: 16

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 180 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65204 (0xFEB4)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Trip Time in VSL	1024
05-08	4 bytes	Trip Time in Top Gear	1025
09-12	4 bytes	Trip Time in Gear Down	1026
13-16	4 bytes	Trip Time in Derate by Engine	1027

PGN 65205***Trip Shutdown Information*****- TSI**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 181 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65205 (0xFEB5)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Trip Number of Hot Shutdowns	1020
3-4	2 bytes	Trip Number of Idle Shutdowns	1021
5-6	2 bytes	Trip Number of Idle Shutdown Overrides	1022
7-8	2 bytes	Trip Sudden Decelerations	1023

PGN 65206***Trip Vehicle Speed/Cruise Distance Information*****- TVI**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 182 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65206 (0xFEB6)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Trip Maximum Vehicle Speed	1018
3-6	4 bytes	Trip Cruise Distance	1019

PGN 65207**Engine Speed/Load Factor Information****- LF**

Transmission Repetition Rate: On request

Data Length: 10

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 183 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65207 (0xFEB7)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Trip Maximum Engine Speed	1013
3-4	2 bytes	Trip Average Engine Speed	1014
5	1 byte	Trip Drive Average Load Factor	1015
6	1 byte	Total Drive Average Load Factor	1016
7-10	4 bytes	Total Engine Cruise Time	1017

PGN 65208**Trip Fuel Information (Gaseous)****- GTFI**

Transmission Repetition Rate: On request

Data Length: 22

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 184 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65208 (0xFEB8)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Trip Drive Fuel Used (Gaseous)	1007
05-08	4 bytes	Trip PTO Moving Fuel Used (Gaseous)	1008
09-12	4 bytes	Trip PTO Non-moving Fuel Used (Gaseous)	1009
13-16	4 bytes	Trip Vehicle Idle Fuel Used (Gaseous)	1010
17-20	4 bytes	Trip Cruise Fuel Used (Gaseous)	1011
21-22	2 bytes	Trip Drive Fuel Economy (Gaseous)	1012

PGN 65209***Trip Fuel Information (Liquid)*****- LTFI**

Transmission Repetition Rate: On request
 Data Length: 22
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 185 PGN Supporting Information:
 Default Priority: 7
 Parameter Group Number: 65209 (0xFEB9)

01-04	4 bytes	Trip Drive Fuel Used	1001
05-08	4 bytes	Trip PTO Moving Fuel Used	1002
09-12	4 bytes	Trip PTO Non-moving Fuel Used	1003
13-16	4 bytes	Trip Vehicle Idle Fuel Used	1004
17-20	4 bytes	Trip Cruise Fuel Used	1005
21-22	2 bytes	Trip Drive Fuel Economy	1006

PGN 65210***Trip Distance Information*****- TDI**

Transmission Repetition Rate: On request
 Data Length: 12
 Extended Data Page: 0
 Data Page: 0
 PDU Format: 254
 PDU Specific: 186 PGN Supporting Information:
 Default Priority: 7
 Parameter Group Number: 65210 (0xFEBA)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	Trip Distance on VSL	998
5-8	4 bytes	Trip Gear Down Distance	999
9-12	4 bytes	Trip Distance in Top Gear	1000

PGN 65211***Trip Fan Information*****- TFI**

Transmission Repetition Rate: On request

Data Length: 16

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 187 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65211 (0xFEBC)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Trip Fan On Time	994
05-08	4 bytes	Trip Fan On Time Due to the Engine System	995
09-12	4 bytes	Trip Fan On Time Due to a Manual Switch	996
13-16	4 bytes	Trip Fan On Time Due to the A/C System	997

PGN 65212***Compression/Service Brake Information*****- CBI**

Transmission Repetition Rate: On request

Data Length: 16

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 188 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65212 (0xFEBC)

Start Position	Length	Parameter Name	SPN
01-04	4 bytes	Total Compression Brake Distance	990
05-08	4 bytes	Trip Compression Brake Distance	991
09-12	4 bytes	Trip Service Brake Distance	992
13-16	4 bytes	Trip Service Brake Applications	993

PGN 65213**Fan Drive****- FD**

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 189 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65213 (0xFEED)

Start Position	Length	Parameter Name	SPN
1	1 byte	Estimated Percent Fan Speed	975
2.1	4 bits	Fan Drive State	977
3-4	2 bytes	Fan Speed	1639

PGN 65214**Electronic Engine Controller 4****- EEC4**

Transmission Repetition Rate: On request

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 190 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65214 (0xFEEB)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Engine Rated Power	166
3-4	2 bytes	Engine Rated Speed	189

PGN 65215**Wheel Speed Information****- EBC2**

Transmission Repetition Rate: 100 ms

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 191 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65215 (0xFEBF)

Start Position	Length	Parameter Name	SPN
1-2	2 bytes	Front Axle Speed	904
3	1 byte	Relative Speed; Front Axle, Left Wheel	905
4	1 byte	Relative Speed; Front Axle, Right Wheel	906
5	1 byte	Relative Speed; Rear Axle #1, Left Wheel	907
6	1 byte	Relative Speed; Rear Axle #1, Right Wheel	908
7	1 byte	Relative Speed; Rear Axle #2, Left Wheel	909
8	1 byte	Relative Speed; Rear Axle #2, Right Wheel	910

PGN 65216**Service Information****- SERV**

Transmitted with the service component identification that has the shortest distance or nearest time until the next service inspection.

NOTE - There are two acceptable formats for the Service PGN. Format 1 has only 8 bytes of data and reports the component most in need of service for each of the three categories. Format 2, however, uses the transport layer as necessary in order to repeat these 8 bytes of service component information until all supported service components in each category have been transmitted.

Transmission Repetition Rate: On request

Data Length: 8 bytes or variable

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 192 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65216 (0xFEC0)

Start Position	Length	Parameter Name	SPN
1	1 byte	Service Component Identification	911
2-3	2 bytes	Service Distance	914
4	1 byte	Service Component Identification	912
5	1 byte	Service Delay/Calendar Time Based	915
6	1 byte	Service Component Identification	913
7-8	2 bytes	Service Delay/Operational Time Based	916

PGN 65217**High Resolution Vehicle Distance****- VDHR**

Transmission Repetition Rate: 1 s

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 193 PGN Supporting Information:

Default Priority: 6

Parameter Group Number: 65217 (0xFEC1)

Start Position	Length	Parameter Name	SPN
1-4	4 bytes	High Resolution Total Vehicle Distance	917
5-8	4 bytes	High Resolution Trip Distance	918

PGN 65218**Electronic Retarder Controller 2****- ERC2**

Transmission Repetition Rate: 1 s when active; or on change of state

Data Length: 8

Extended Data Page: 0

Data Page: 0

PDU Format: 254

PDU Specific: 194 PGN Supporting Information:

Default Priority: 7

Parameter Group Number: 65218 (0xFEC2)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Transmission Output Retarder	748

PGN 65219**Electronic Transmission Controller 5****- ETC5**

Transmission Repetition Rate: On request
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 195 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65219 (0xFEC3)

Start Position	Length	Parameter Name	SPN
1.1	2 bits	Transmission High Range Sense Switch	778
1.3	2 bits	Transmission Low Range Sense Switch	779
2.1	2 bits	Transmission Reverse Direction Switch	767
2.3	2 bits	Transmission Neutral Switch	604
2.5	2 bits	Transmission Forward Direction Switch	903

PGN 65221**Electronic Transmission Controller 4****- ETC4**

Transmission Repetition Rate: On request
Data Length: 8
Extended Data Page: 0
Data Page: 0
PDU Format: 254
PDU Specific: 197 PGN Supporting Information:
Default Priority: 7
Parameter Group Number: 65221 (0xFEC5)

4.5	2 bits	Auxiliary I/O #14	714
4.7	2 bits	Auxiliary I/O #13	713
5-6	2 bytes	Auxiliary I/O Channel #1	1083
7-8	2 bytes	Auxiliary I/O Channel #2	1084

PGN 65242**Software Identification****- SOFT**

Byte: 1 Number of software identification fields

2-n Software identification(s)

Delimiter (ASCII "**")

NOTE- The software identification field is variable in length and may contain up to 125 software identification designators. An ASCII "**" is used as a delimiter to separate multiple software identifications. Additional software identification fields may be added at the end, each separated by an ASCII "**" as a delimiter. An ASCII "**" is required at the end of the last software identification field, even if there is only one software identification designator.

15-16	2 bytes	Retarder Speed At Peak Torque, Point 5 (Retarder Configuration)	547
17-18	2 bytes	Reference Retarder Torque (Retarder Configuration)	556
19	1 byte	Percent Torque At Peak Torque, Point 5 (Retarder Configuration)	555

PGN 65250**Transmission Configuration****- TCFG**

Total message length depends on total number of forward and reverse gear ratios.

NOTE: The first gear ratio transmitted in bytes 3,4 will be the highest reverse gear ratio. Additional 2-byte gear ratios will follow:

3,4 Highest reverse gear ratio

.

a,b Lowest reverse gear ratio

c,d Lowest forward gear ratio

.

e,f Highest forward gear ratio

Transmission Repetition Rate: On request

Default Priority: 6

Parameter Group Number: 65250 (0xFEE2)

Start Position	Length	Parameter Name	SPN
1	1 byte	Number of Reverse Gear Ratios	958
2	1 byte	Number of Forward Gear Ratios	957
3-4	2 bytes	Transmission Gear Ratio	581

PGN 65251 (R) Engine Configuration 1**- EC1**

This map describes the stationary behavior of the engine and the speed dependent available indicated torque. This map should reflect the effect of changes due to barometric pressure, engine temperature, and any other stationary changes (sensor failures, etc.) which influence the engine torque curve more than 10%. This map is only valid for maximum boost pressure. At low boost pressures the torque limit may be much lower.

The engine configuration message must be sent at any time that the engine configuration map has changed by more than 10% of speed or torque (due to events other than boost pressure) since that last time the message was transmitted. As an alternative, it may be sent periodically, once every 5 s. It shall also be sent on response to a configuration request message.

The engine characteristic can be described in one of three modes. Mode 1 provides a complete curve of speed and torque points (see PGN65251_A). Modes 2 and 3 provide a partial curve of speed and torque points and a separate endspeed governor characteristic. In modes 2 and 3, the receiver of the engine configuration message has to calculate the minimum of the engine torque curve and the endspeed governor characteristic to get the final available engine torque.

Mode 2 provides a high idle point where torque equals zero (point 6) and the endspeed governor gain Kp (see Figure PGN65251_B). Mode 3 provides the kick-in point of the endspeed governor (point 2) and the governor gain Kp (see Figure PGN65251_C).

The selection of the three modes can be done by setting the parameters as shown in 'Table PGN65251_A.

Transmission Repetition Rate:	On change of torque/speed points of more than 10% since last transmission. Alternative: Every 5 s.

APPENDIX D
SUPPORTING INFORMATION

SPN 16 – Fuel Filter (Suction Side) Differential Pressure

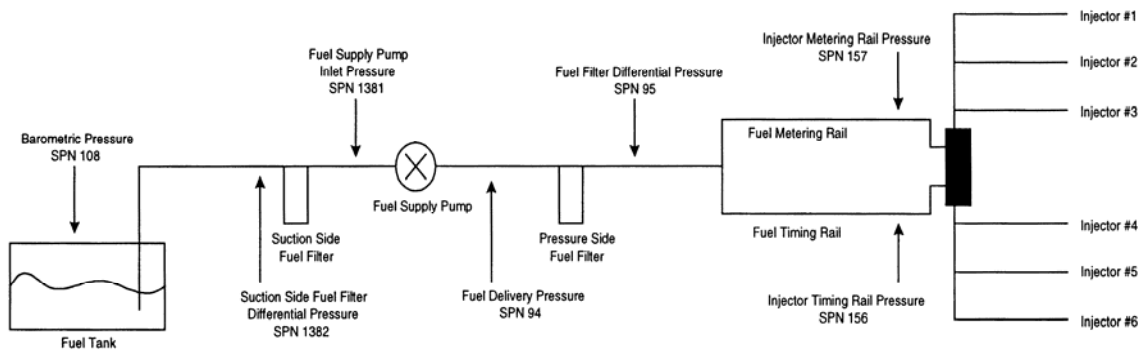

FIGURE SPN16_A—FUEL SYSTEM WITH RAILS

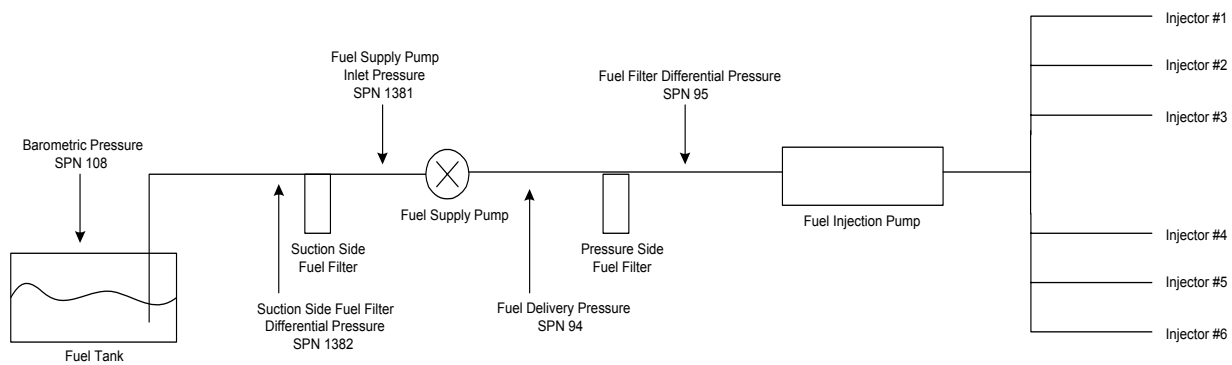

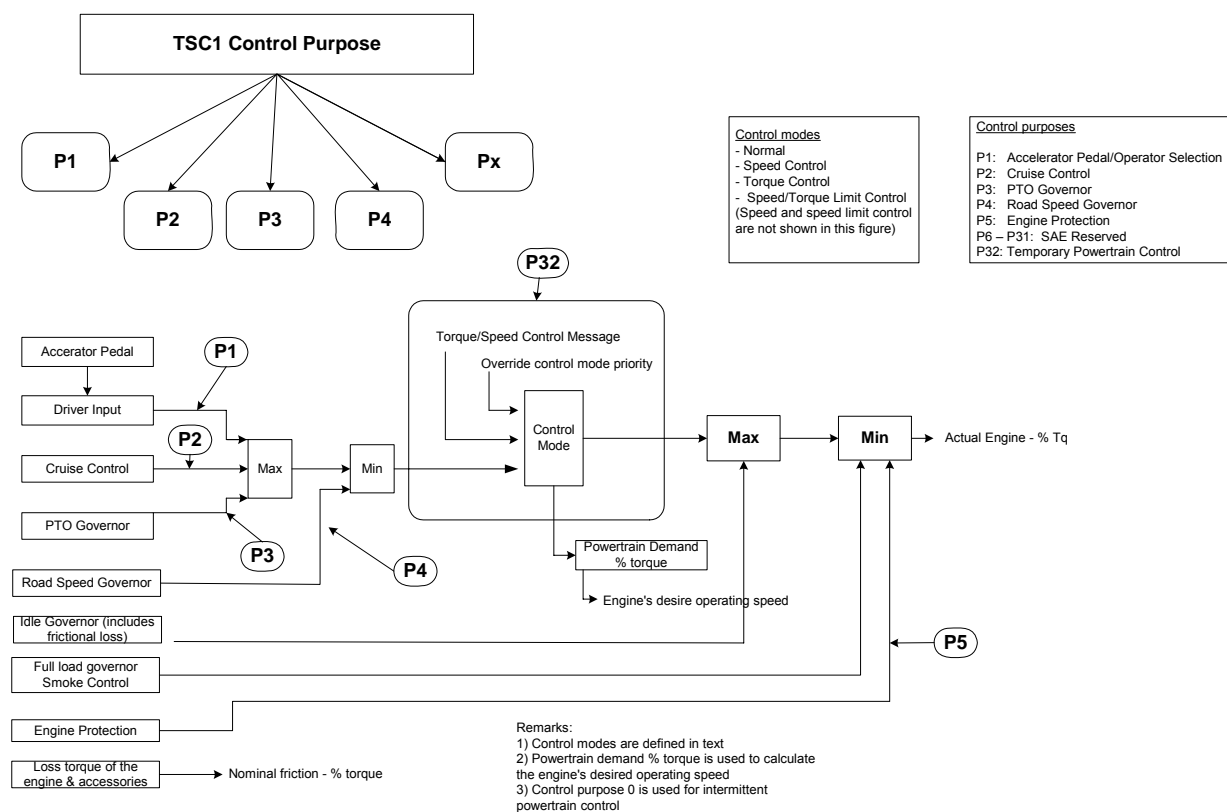

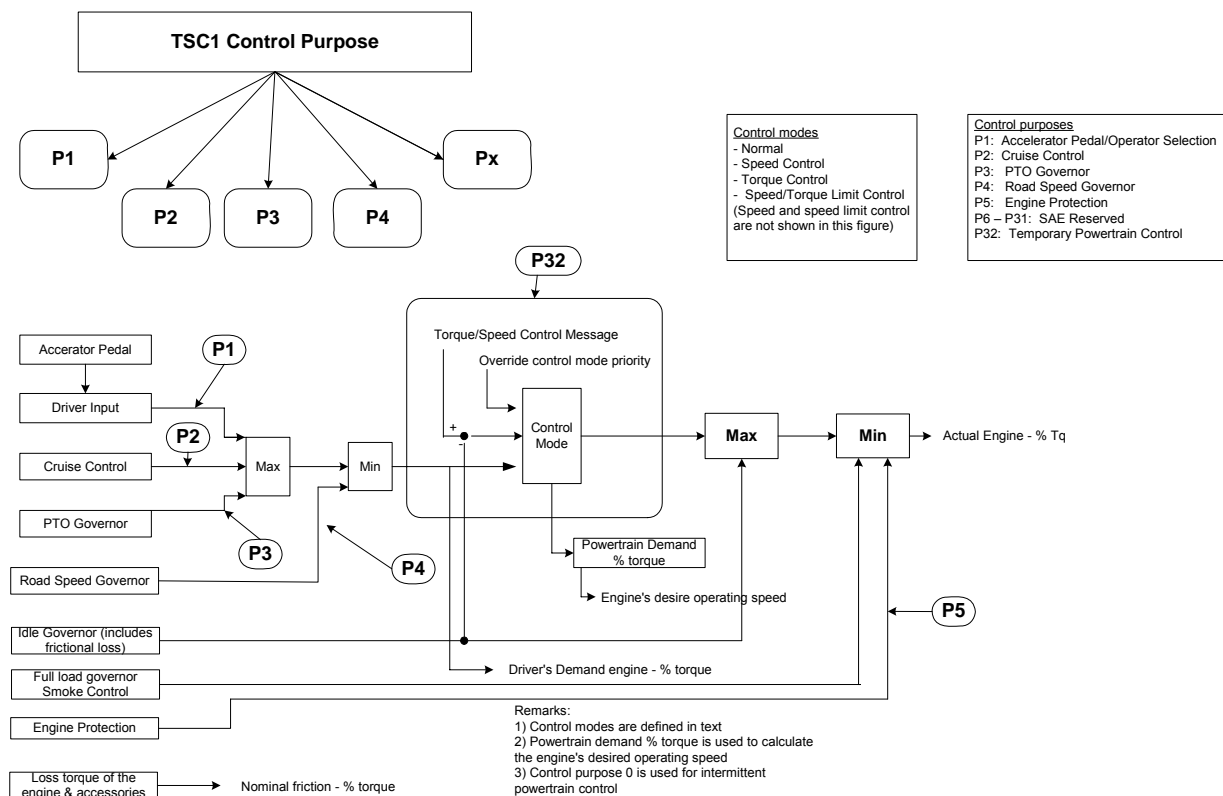

FIGURE SPN16_B—FUEL SYSTEM WITH PUMP

(R) SPN 512 – Driver's Demand Engine – Percent Torque

Figure SPN512_A and Figure SPN512_B show two typical torque calculations in an engine controller. On the left side of the figures there are single engine controller functions. The output torque signals of these functions are connected in the manner shown. The result is the actual engine percent torque which is realized by the engine.

(R) FIGURE SPN512_A—TORQUE COMMANDS AND CALCULATIONS WHEN A “MAXIMUM SELECTION FOR LOW IDLE” TECHNIQUE IS USED

(R) FIGURE SPN512_B—TORQUE COMMANDS AND CALCULATIONS WHEN A “SUMMATION WITH LOW IDLE” TECHNIQUE IS USED

On top of the figures, external torque commands (e.g., traction and transmission control) can control the engine. These commands can influence the engine torque by four control modes. Four engine internal signals are transmitted to the network:

- Driver's demand engine - percent torque
- Actual engine - percent torque
- Nominal friction - percent torque
- Engine's desired operating speed

The difference between Figure SPN512_A and Figure SPN512_B is the connection of the idle governor output to the torque calculation. In Figure SPN512_A there is a maximum selection, while in Figure SPN512_B a summation is used. The summation method needs a subtraction point for each external command input because the starting point of an ASR or a shift operation should be the present actual engine - percent torque value. As the actual engine - percent torque signal contains the idle governor output and the external commands are compared with the driver's demand engine - percent torque or the powertrain demand which don't contain the idle governor output, the external commands must be subtracted by the idle governor output to get the correct signals for comparison.

The advantage of the maximum selection (Figure SPN512_A) is that no other speed controller can work parallel to the idle governor. This allows for a better optimization of the different speed control loops. The advantage of the summation method (Figure SPN512_B) is that changes of the idle governor output influence the engine directly (no dead zones exist).

SPN 518 – Engine Requested Torque/Torque Limit

When preparing to send a request to a retarder, the states of the Retarder Enable - Shift Assist Switch and the Retarder Enable - Brake Assist Switch must be checked by the requesting device to determine whether the request may be sent to the Retarder. Figure SPN518_A shows how those switches and other operator and network inputs are used to create the actual retarder operating point on a system-wide basis. The Retarder may or may not be the device reading the actual switches; even if it is, it will not accept or reject a request based on its knowledge of the switch states. Its function is to send the switch states via J1939 (in its ERC1 message) and it expects other J1939 nodes to honor those switch states by refraining from sending inappropriate commands.

Several elements affect the retarder besides the Requested Torque parameter in the TSC1 message. These elements are not looked at by the retarder itself, but are used by various other devices to determine if they may ask the retarder to be engaged. These are the Retarder Enable Shift Assist Switch, and the Retarder Enable Brake Assist Switch. The relationship between those switches and the retarder (as well as that between the operator and retarder) is described in Figure SPN518_A.

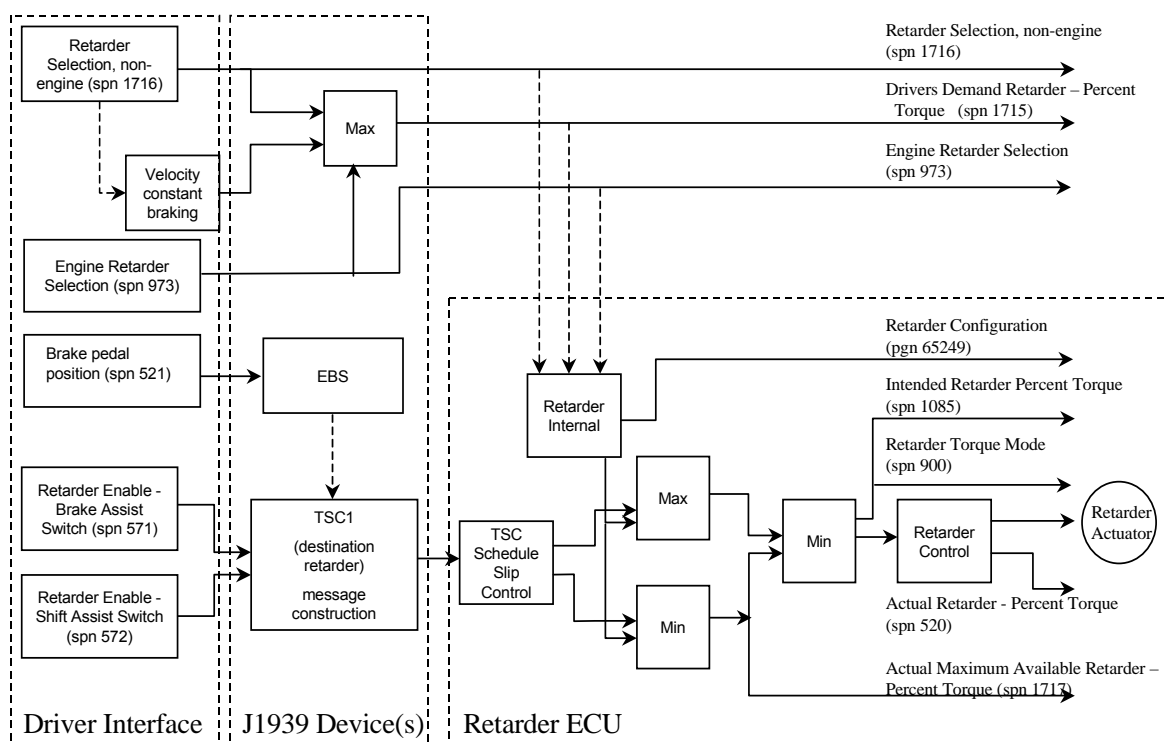

FIGURE SPN518_A—RELATIONSHIP BETWEEN OPERATOR/SWITCH INPUTS AND RETARDERS

Tables SPN518_A and SPN518_B identify many use cases. Each row is the summary of one or more uses. One of the primary communications provided by these tables is that the retarder can be activated by the J1939 TSC1 message, although the operator input is "off."

**TABLE SPN518_A—PRIMARY RETARDER – BEFORE TRANSMISSION
(Compression Release Engine Retarder)**

J1939 Inputs ¹ (TSC1)	Operator Inputs			Outputs	
	Cruise Control ²	Accel Pedal ³	Torque Request Via "Retarder Selection, Engine" ⁴	May Retarder Provide Brake Torque?	Retarder Torque Mode (base 2)
T	Any	Any	Any	No	0000
R	Any	Any	Any	Yes	> 0001
NTR	Any	T	Any	No	0000
NTR	R	ZR	R	Yes	> 0001
NTR	R	ZR	ZR	Yes	0010
NTR	NTR	ZR	R ⁵	Yes ⁵	0001
NTR	NTR	ZR	ZR	No	0000
ZR	Any	Any	Any	No	0000

Key:

T = request positive Torque

R = request Retarder torque

NTR = No Torque Request

ZR = Zero torque Requested by retarder

Any = This value has no bearing whether or not the Retarder is available. The retarder will NOT be available because some other entity is requesting positive torque.

Footnotes:

1. Note that the TSC1 inputs will override Operator Torque Selection. The J1939 devices that generate the TSC1 messages will assure that the Retarder Enable Brake Assist Switch and Retarder Enable Shift Assist Switch are enabled as appropriate before commanding the Retarder to engage. See parameters SPN 571 and 572 for descriptions of these switches. Also, for the purposes of this table, it is assumed that if the TSC1, Destination Retarder message is requesting Retarder Torque, no other TSC1, Destination Engine messages are requesting engine fueling. That arbitration is beyond the scope of this section.
2. This refers to the torque requested by the cruise control, and does not refer to the cruise switches. Cruise control is defined to be on and engaged in this column. The cruise control should not request retarder torque unless the Retarder Enable - Brake Assist Switch is enabled.
3. The Accelerator Pedal is inherently incapable of requesting negative torque. It may have no particular torque demands, or it may request some engine fueling, which prevents the retarder from engaging. Consequently, the chart is complete even though no rows exist for the AP to request retarder torque.
4. The Operator Torque Request is incapable of requesting positive torque. The table is complete without the Operator Torque Request asking for positive Engine Torque
5. This description assumes no other switch (such as brake pedal depressed) is needed in order for the operator torque request to initiate retarder braking. Other implementation specific rules would apply if such a catalyst were needed.

Table SPN518_B shows the relationship between various inputs and an after engine retarder. The biggest difference between this type of retarder and an engine brake is that the exhaust brake may be engaged while the engine is still being fueled. Also, if cruise control is communicating with the retarder, it would do so using the TSC1 message.

Consequently, columns for accelerator pedal input and cruise control input would only serve to confuse the issue of retarder availability in Table SPN518_B.

TABLE SPN518_B—PRIMARY RETARDER – AFTER ENGINE (EXHAUST BRAKE, HYDRAULIC RETARDER)

Operator Inputs		Outputs	
J1939 Inputs ¹ (TSC1)	Torque Request Via operator torque request ²	May Retarder Provide Brake Torque?	Retarder Torque Mode (base 2)
R	R	Yes	> 0001
R	ZR	Yes	> 0001
NTR	R ³	Yes ³	0001
NTR	ZR	No	0000
ZR	Any	No	0000

Key:

R = request Retarder torque - some amount of braking torque is requested of the retarder.

ZR = Zero Retarder request - Zero percent torque is requested of the retarder

NTR = No retarder Torque Request - No request is being made of the retarder one way or another.

Any = This value has no bearing whether or not the retarder is available. In fact, because of what some other entity is requesting, the retarder will NOT be available.

Footnotes:

1. Note that the TSC1 inputs will override Operator Torque Selection. The J1939 devices that generate the TSC1 messages will assure that the Retarder Enable Brake Assist Switch and Retarder Enable Shift Assist Switch are enabled before commanding the Retarder to engage. Also, for the purposes of this table, it is assumed that if the TSC1, Destination Retarder message is requesting Retarder Torque, no other TSC1, Destination Engine messages are requesting engine fueling. That arbitration is beyond the scope of this section.
2. The Operator Torque Request is incapable of requesting positive torque. The table is complete without the Operator Torque Request asking for positive Engine Torque
3. This description assumes no other switch (such as brake pedal depressed) is needed in order for the operator torque request to initiate retarder braking. Other implementation specific rules would apply if such a requirement were needed.

SPN 519 – Desired Operating Speed Asymmetry Adjustment**FIGURE SPN519_A—DESIRED OPERATING SPEED ASYMMETRY ADJUSTMENT**

SPN 527 – Cruise Control States**TABLE SPN527_A —CRUISE CONTROL STATES**

Bit States	Cruise Control State
000	Off/Disabled
001	Hold
010	Accelerate
011	Decelerate/Coast
100	Resume
101	Set
110	Accelerator override
111	Not available

State Descriptions:

000b Off/Disabled —Used to indicate that the cruise control device is off or on standby. Note that the cruise control system switch does not necessarily have to be off to be in this mode.

001b Hold —Used to indicate that the cruise control device is active and currently maintaining a captured operating speed.

010b Accelerate —Used to indicate that the cruise control device is in the process of ramping up the operating speed.

011b Decelerate —Used to indicate that the cruise control device is in the process of ramping down, or coasting, the operating speed.

100b Resume —Used to indicate that the cruise control device is in the process of resuming the operating speed to a previously captured value.

101b Set —Used to indicate that the cruise control device is establishing the current vehicle speed as the operating speed (captured value).

110b Accelerator Override —Used to indicate that the cruise control device is active but not currently maintaining the captured operating speed.

SPN 590 – Idle Shutdown

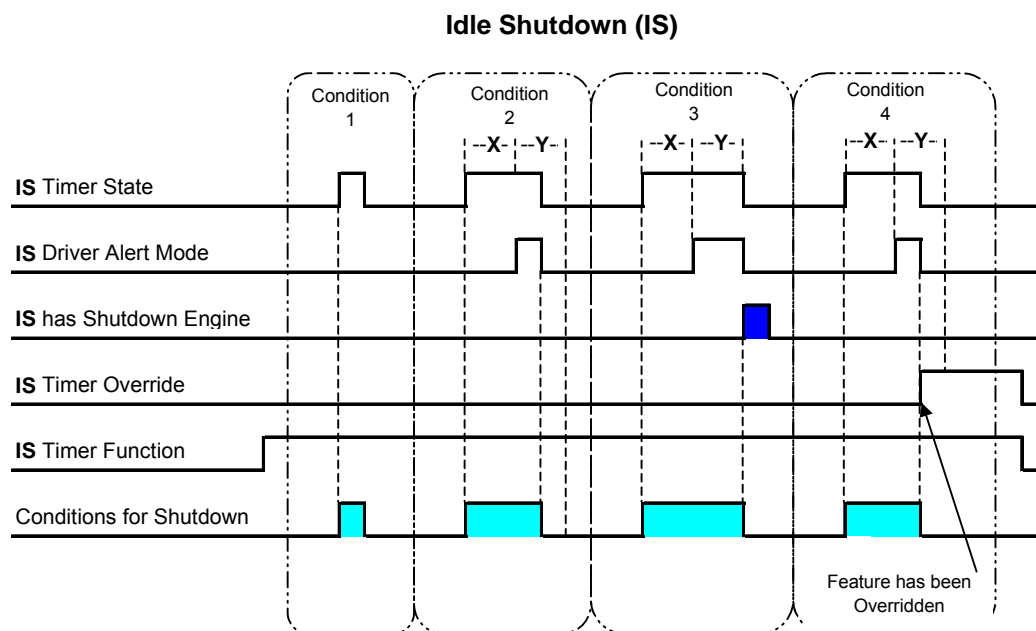

FIGURE SPN590_A—IDLE SHUTDOWN (IS)

Condition 1 - When the IS Timer Override is inactive, the IS Timer State will become inactive if the conditions for shutdown no longer exist before the “X” time interval has expired or IS Driver Alert Mode is activated.

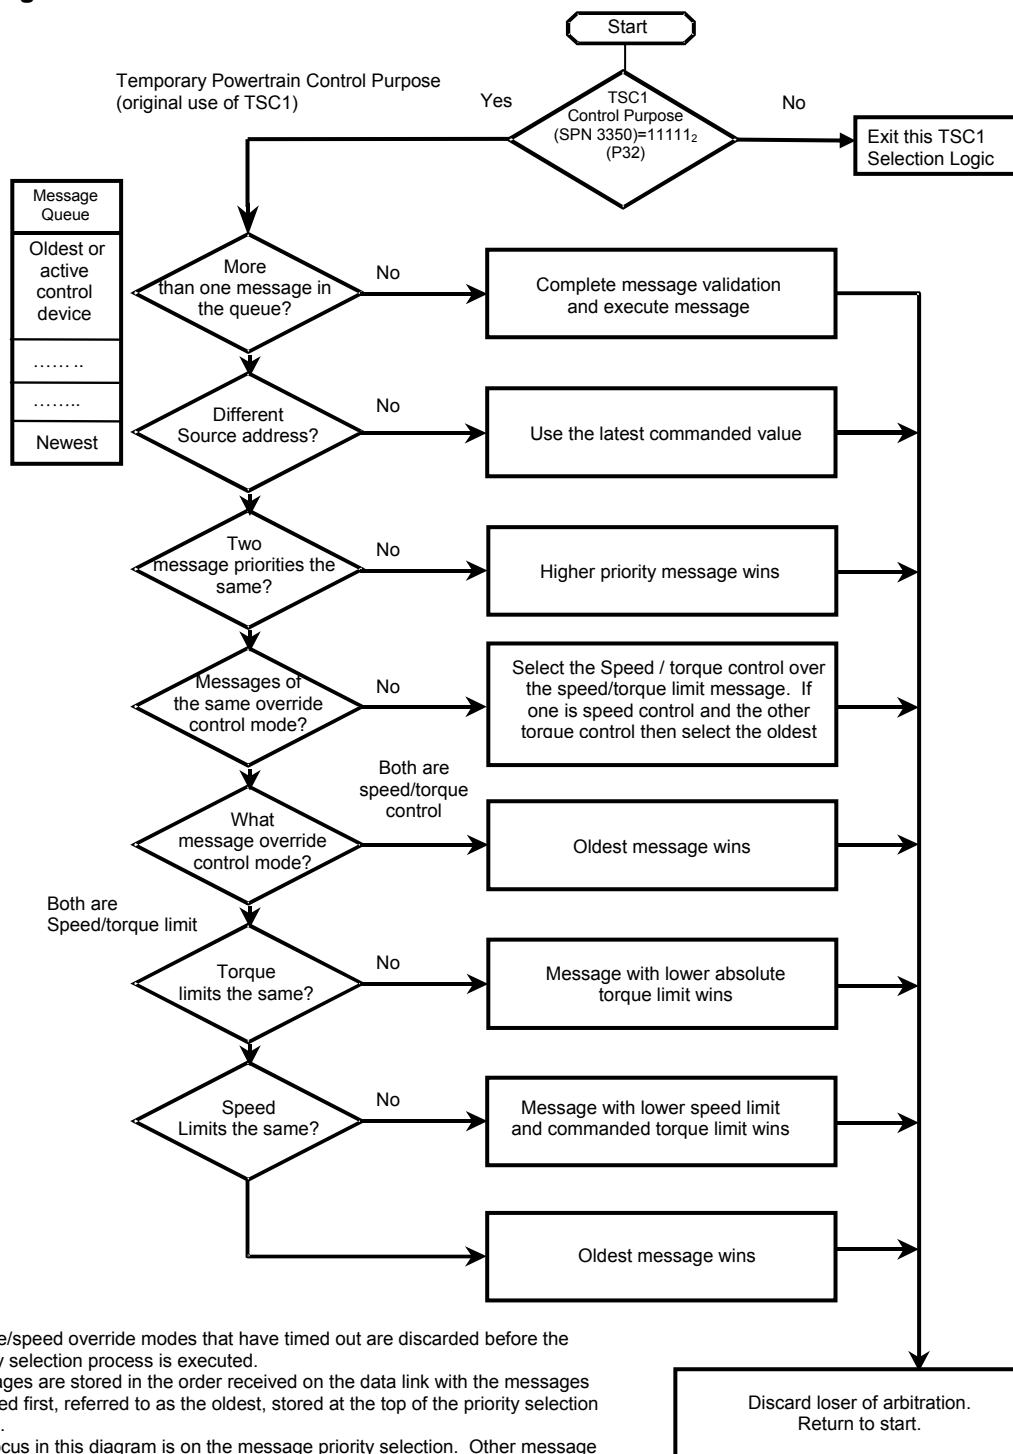

Condition 2 - When the IS Timer Override is inactive, the IS Timer State will become inactive if the conditions for shutdown no longer exist before the IS Driver Alert Mode “Y” time interval has expired.

Condition 3 - When the IS Timer Override is inactive, then the IS has Shutdown Engine will be active after the “Y” time interval has expired.

Condition 4 - When the IS Timer Override is active during the “Y” time interval, then the IS feature shall be overridden and will no longer be available until the system has been re-initiated.

NOTE —0 State – Inactive, disabled in calibration, or conditions for idle shutdown do not exist.

1 State – Active, enabled in calibration, or conditions for idle shutdown do exist.

(R) SPN 695 – Engine Override Control Mode**(R) FIGURE SPN695_A—TORQUE/SPEED CONTROL PRIORITY SELECTION LOGIC**

SPN 899 – Engine/Retarder Torque Modes

TABLE SPN899_A—ENGINE/RETARDER TORQUE MODES

Bit States	Engine/Retarder Torque Mode
0000	Low idle governor/no request (default mode)
0001	Accelerator pedal/operator selection
0010	Cruise control
0011	PTO governor
0100	Road speed governor
0101	ASR control
0110	Transmission control
0111	ABS control
1000	Torque limiting
1001	High speed governor
1010	Braking system
1011	Remote accelerator
1100	Service procedure
1101	not defined
1110	Other
1111	Not available

State Descriptions:

0000b Low Idle Governor/No request (Default mode) - This mode is active if the accelerator pedal (not necessarily the torque output of the driver input, see Figure SPN512_A and Figure SPN512_B) is zero. This is the default mode. At low speed, the low idle governor may be active while at higher speed, it is zero.

0001b Accelerator Pedal - This mode is active if the accelerator pedal position is active (being followed). This mode is active for the retarder if it is turned on by the operator. Note that it may be disabled by the accelerator pedal or clutch switches (operator selection).

0010b Cruise Control - This mode is active if cruise control is active and greater than the accelerator pedal request.

0011b PTO Governor - This mode is active if the PTO governor is active.

0100b Road Speed Governing - Indicates that road speed governing is active and limiting torque.

0101b ASR Control - Indicates that the ASR command is active (Speed, Torque, or Speed/Torque Limit Control).

0110b Transmission Control - Indicates that the transmission command is active (Speed, Torque, or Speed/Torque Limit Control).

0111b ABS Control - Indicates that the ABS is controlling torque.

1000b Torque Limiting - This mode is active if the demanded or commanded engine torque is limited by internal logic due to full load, smoke and/or emissions control, engine protection and/or other factors. A reduced torque limit may be necessary for engine protection if the engine temperature is too high or a

sensor fails (speed, timing, or boost pressure), as examples.

1001b High Speed Governor - This mode is active if the engine is controlled by the high speed governor due to normal operation.

1010b Brake System (Electronic) - This indicates that the brake pedal is controlling the torque. Note that this may include enabling of the retarder when the brake pedal is depressed (touched).

Note that if there is a request to the retarder but operating conditions do not allow braking, this situation will be reflected by the Percent Retarder Torque = 0 when broadcast.

1011b Remote Accelerator - This mode is active if the remote accelerator is controlling engine speed.

1100b Service procedure - This mode is active if the engine is operating in a specific service mode. For example, fuel injection may be disabled to allow a service procedure to crank the engine without fuel injection occurring.

1110b Other - Torque control by a type of device which is different than those defined in states 0000b to 1100b.

SPN 901 – Retarder Type

TABLE SPN901_A —RETARDER TYPES

Bit States	Retarder Type
0000	Electric/Magnetic
0001	Hydraulic
0010	Cooled Friction
0011	Compression Release (Engine retarder)
0100	Exhaust
0101-1101	Not defined
1110	Other
1111	Not available

Electric/Magnetic Retarder - The electric/magnetic retarder functions by creating eddy currents generated in a conductive armature when placed in a variable magnetic field. Currently, electric retarders have a stator on which field coils are mounted. The rotors, mounted on both sides of the drive shaft, are ribbed for heat dissipation. In order to brake the vehicle, voltage is applied to the field coils which generate a magnetic field inducing eddy currents in the rotors as they pass through the field. Magnetic retarders use a permanent magnet to generate the eddy currents. Braking-torque is dependent on stator excitation and on the air gap between the rotor and the stator.

Hydraulic Retarder - The hydraulic retarder is a hydrodynamic coupling device. Two impellers which face each other, a rotor and a stator, are filled with oil. When the rotor, which is connected to the vehicle drive shaft rotates, it drives the oil in the direction of rotation. The mechanical energy produced by the rotor is converted into kinetic energy in the operating fluid. Hydrodynamic coupling between the rotor and stator converts the kinetic energy into heat and the rotor is retarded. This retardation effect is transmitted to the drive shaft and the vehicle is retarded.

Cooled Friction Brake - The cooled friction brake uses air or hydraulic fluid to dissipate heat from the friction surface of the service brake. By controlling the friction surface temperature, retarding torque is improved, along with a reduced rate of wear.

Compression Release Engine Retarder - The compression release engine retarder converts a power-producing diesel engine into a power-absorbing retarding mechanism by opening the exhaust valve near the top dead center in the engine compression cycle. No positive power will be produced, since the compressed air mass is released. The vehicle is retarded as it must provide energy to compress the cylinder air charge and subsequently to return the piston to the bottom position.

Exhaust Brake - The exhaust brake restricts the escape of the exhaust gas from the exhaust manifold. Each succeeding exhaust stroke builds up a back pressure in the manifold which exerts a retarding effect to the pistons during the exhaust stroke. The engine turns against this back pressure creating a braking effect to the vehicle.

Auxiliary Retarder - Fans, air conditioners, or any power-absorbing device in the vehicle can also function as retarders as they impose parasitic loading on the engine or vehicle.

SPN 911 – Service Component Identification

SPN 1014 – Trip Average Engine Speed

The equation is as follows:

$$\text{Trip average engine speed} = \frac{\sum_{i=0}^N \text{RPM}(i)}{N} \quad (\text{Eq.SP1014_A})$$

where:

RPM is the engine speed at sample i, N is the number of samples of engine speed and is proportional to the current trip elapsed time

SPN 1085 – Intended Retarder Percent Torque

FIGURE SPN1085_A—INTENDED RETARDER PERCENT TORQUE

SPN 1107 – Engine Protection System Timer State

FIGURE SPN1107_A—ENGINE PROTECTION SYSTEM (EPS)

Condition 1 – When the EPS Timer Override is inactive, the EPS Timer State will become inactive if the conditions for shutdown no longer exist before the "X" time interval has expired or EPS Approaching Shutdown is activated.

Condition 2 – When the EPS Timer Override is inactive and conditions for shutdown exist during the "Y" time interval, then the Engine will shutdown, even though shutdown conditions subside before the "Y" time interval has expired.

Condition 3 – When the EPS Timer Override is active, then the EPS feature shall be overridden allowing for an engine failure when the "Z" time interval has expired.

Condition 4 – When the EPS Timer Override is active and then allowed to go inactive during the "Y" time interval, the response by the EPS shall be the same as condition 2. The time intervals for "X" and "Y" shall always start when conditions for shutdown first commence regardless whether the EPS Timer Override is enabled or not.

NOTE —0 State – Inactive, disabled in calibration, or conditions for Engine Protection do not exist.

1 State – Active, enabled in calibration, or conditions for Engine Protection do exist.

SPN 1734 – Nominal Level Front Axle**FIGURE SPN1734_A: EXAMPLE FOR NOMINAL LEVELS**

If the vehicle height, to be controlled by the ASC, is not within the tolerances of the defined nominal levels, the nominal level is set to not specified.

The defined vehicle heights can be activated via the ASC 2 (PGN: 53760) message or via a remote control (see figure SPN1734_B). The remote control is an external unit to operate the suspension system.

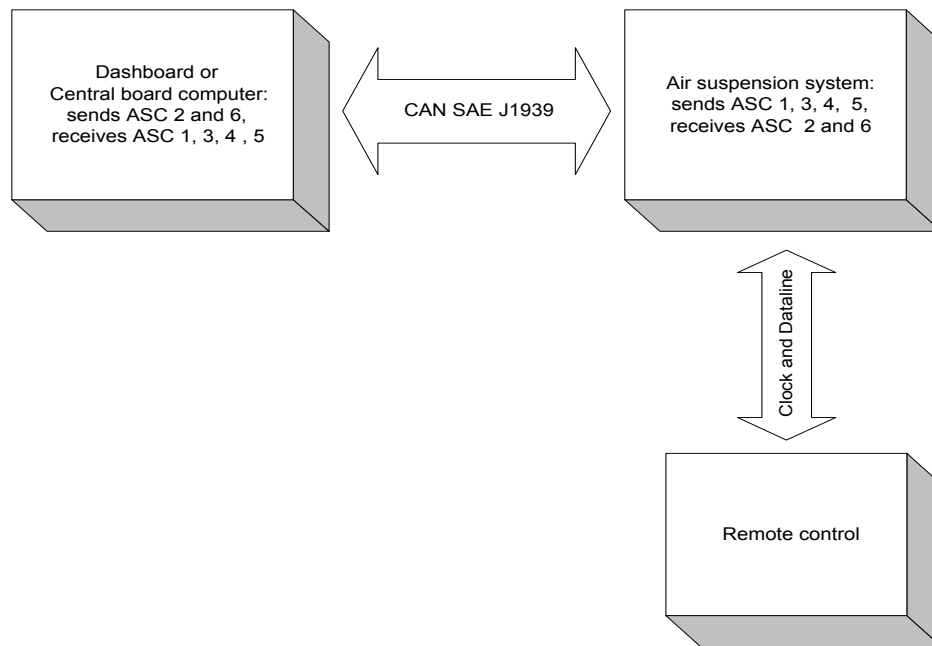

FIGURE SPN1734_B: POSSIBLE INTEGRATION OF ASC SYSTEM INTO VEHICLE NETWORK

An example: The nominal level is the normal level 1. Via remote control a new nominal level (for instance upper level) is requested. The nominal level is then set to upper level and during the height modification the ASC is indicating that the actual level is below nominal level until the upper level is reached.

SPN 2432 – Engine Demand - Percent Torque**Background:**

During periods of TSC#1 engine control, other devices on the J1939 network may wish to know where the engine wants to go once it is released from TSC#1 control. In order for option transitions of driveline torque between different devices, it becomes necessary to understand the *engine's* desired torque for all phases of a TSC#1 control sequence.

Driver's Demand Engine – Percent Torque (SPN 512) provides a partial prediction of the torque the engine wishes to produce after a TSC#1 command is removed. Included in Driver's Demand Torque are external requestors to the powertrain such as accelerator pedal, cruise control, and road speed limit governors. However, *excluded* from DDT are (1) dynamic commands within the powertrain such as smoke control, noise control, and low and high speed engine governing, and (2) external TSC#1 commands to the engine such as those generated by traction control.

For a controller to properly determine the engine's desired output torque during a TSC#1 sequence, it needs knowledge of the torque being scheduled by all active controls within the engine. Since DDT excludes many of these active controllers from its calculation, it cannot be used to accurately predict the desired output torque. The effects of the external TSC#1 commands can be approximated by other devices by means of monitoring TSC#1 messages to the engine; however the effects of the engine's internal dynamic commands are completely unknown and cannot be estimated.

Actual Engine – Percent Torque (SPN 513) provides a window to the engine's desired torque output when no TSC#1 commands are actively controlling the engine. However, when the engine is responding to TSC#1 commands, the Actual Engine – Percent Torque parameter is no longer indicative of the torque that the engine will produce once those TSC#1 commands are removed.

In simplest terms, Engine Demand – Percent Torque (or "EDT") contains the engine's internal dynamic commands that are excluded from the Driver's Demand Engine – Percent Torque definition, including smoke control, noise control, and low and high speed governing. With this additional piece of information, devices on the network that are controlling the engine via TSC#1 messages can determine the torque direction of the engine once the current TSC#1 command is relinquished.

It is important to note that the proposed EDT parameter is used as information. The addition of the EDT parameter should in no way cause a change to the engine's actual torque command architecture.

EDT Calculation:

When no devices are controlling the engine via TSC#1 messages, the value of EDT is equal to the Actual Engine – Percent Torque parameter. When the engine is being controlled via a TSC#1 message, it is necessary for the engine controller to calculate what its' target torque *would be* if there were no external commands being received. This "runner up" in engine control will come from internal dynamic engine commands.

In the calculation of Actual Engine – Percent Torque, the output of the engine's idle governor must be considered, along with the impact of the engine's full load governor, smoke controls and other internal limiting logic. In the determination of the Engine Demand Torque parameter, these same engine logic components are needed, as indicated in Figure SPN 2432_A. However, there is a significant difference: These components only affect the Actual Engine – Percent Torque parameter determination if they are the component *actively* controlling the engine. In EDT, any of these components will be used to calculate EDT if they are the "*runner up*" for engine control. Even though these components may lose in the

engine's internal control arbitration, the engine output torque that they would produce if in command needs to be found to determine EDT.

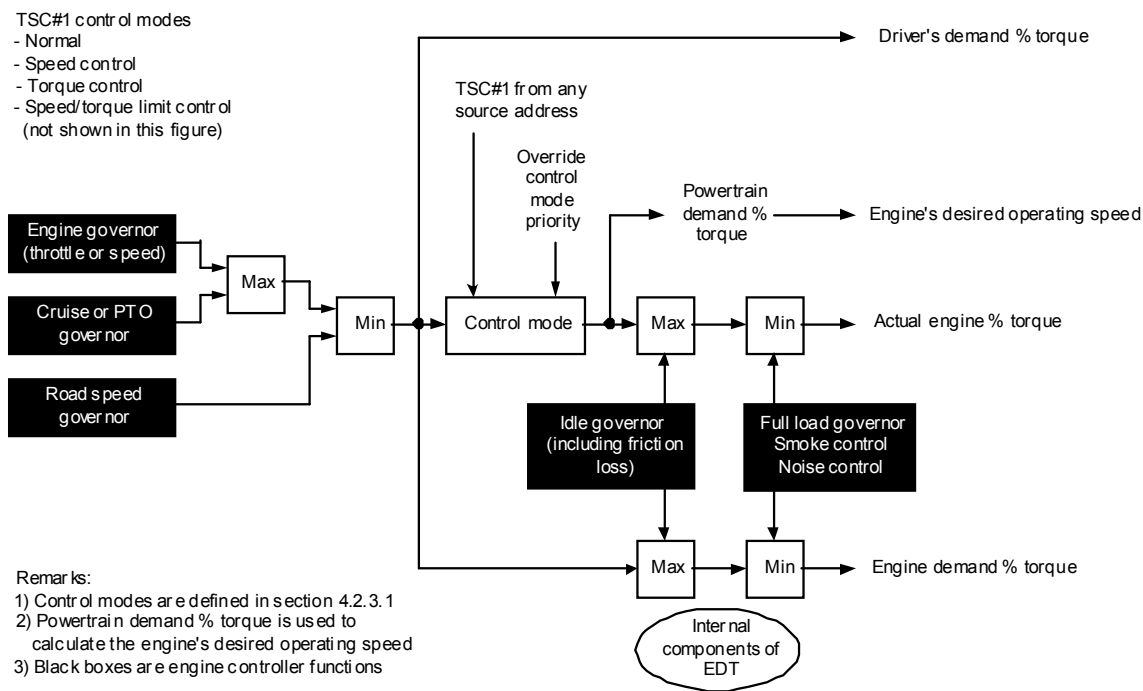

FIGURE SPN2432_A – TORQUE COMMANDS AND CALCULATIONS WHEN A “MAXIMUM LOW IDLE” TECHNIQUE IS USED

If speed governors are involved in determining these components of the EDT calculation, any of the following 3 special cases may need to be addressed:

Special Case #1: Speed Governors

If the engine governor referenced in Figure SPN2432_A is a speed-based governor instead of a throttle table arrangement, a new challenge is presented in determining EDT. Since the speed governor output is directly influenced by the TSC#1 command in control (for example, integrator anti-windup logic), the speed governor's output during TSC#1 commands cannot be used to calculate EDT.

Instead, an *approximation* of the speed governor output without the effects of any TSC#1 commands is required for use in the EDT calculation. “Approximation” refers to removing the effects of integrator terms and any other dynamic components that result from the controlling TSC#1 commands. All elements affecting the speed governor reference should be included before the reference is translated into terms of torque.

All control algorithms with dynamic elements (e.g., speed governors) that execute during TSC#1 commands need to have their outputs replaced by “steady-state” approximations for use in the EDT calculation. Again note that these approximations are for use only in the EDT calculation; the actual engine control logic remains unchanged.

Figure SPN2432_B illustrates EDT and speed governor output during a typical control sequence. The output of the speed governor may tend to lag the engine's torque trace during and after the TSC#1 command sequence. Note however that the TSC#1's influence is not factored into EDT; only when the command sequence ends or is no longer winning in terms of engine control arbitration do the dynamic effects of the speed governor(s) appear in the EDT signal.

FIGURE SPN2432_B – EDT AND SPEED GOVERNOR OUTPUT RELATIONSHIP DURING A CONTROL SEQUENCE

One method of converting the speed governor reference to torque is shown in Figure SPN2432_C. The inputs of current engine speed, accelerator pedal position and the shape of the governor droop curves can be used to find the equivalent torque output of the governor. A lookup table or calculation could be used.

FIGURE SPN2432_C - FINDING EDT TORQUE APPROXIMATION FOR A SPEED GOVERNOR

Special Case #2: “Steep” or zero droop speed governors

Using a steady-state approximation with a “steep” or zero droop speed governor can cause large EDT changes over small speed changes. For example, if a cruise control governor has a zero droop and the vehicle speed is just below the cruise set speed, the steady-state torque approximation using the method described previously is very large. If vehicle speed increases a small amount to above the cruise set speed, the steady-state torque approximation becomes very small or zero.

As a result, a more accurate steady-state torque approximation is needed when steep droop governors are involved. A steep droop speed governor is defined as having a droop slope greater than 0.2% actual torque per rpm as seen below in Figure SPN2432_D.

The following method can be used to determine a steady-state torque approximation for steep or zero droop governors with fast responding integrator anti-windup / integrator resetting:

Upon a TSC#1 message actively controlling engine torque, save the last value of torque commanded by the speed governor (τ_{SG0}) and the last value of speed governor error (ϵ_{SG0}).

During this control sequence, calculate speed governor error (ϵ_{SGi})

Calculate an estimated torque for EDT determination use:

$$\tau_{SG\text{estimated}} = \tau_{SG0} + K_{pSG} * (\epsilon_{SG0} - \epsilon_{SGi})$$

where K_{pSG} is the speed governor proportional gain

FIGURE SPN2432_D - EXAMPLE OF "STEEP DROOP" SPEED GOVERNOR

Special Case #3: "Slow Response" Speed Governors

If the speed governor dynamic elements are slow to respond to a 1 second torque derate, then the speed governor can simply be executed during the TSC#1 event and the output used directly in determining EDT. This is an alternative for a speed governor which does not contain an integrator, or if the integrator anti-windup logic is slow to respond. A guideline for "slow response" is that the governor output after 1 second of torque limiting has only moved 1/3 of the way to the limit, as shown for example in Figure SPN2432_E.

FIGURE SPN2432_E – EXAMPLE OF “SLOW TO RESPOND” SPEED GOVERNOR

(Continued on next page)

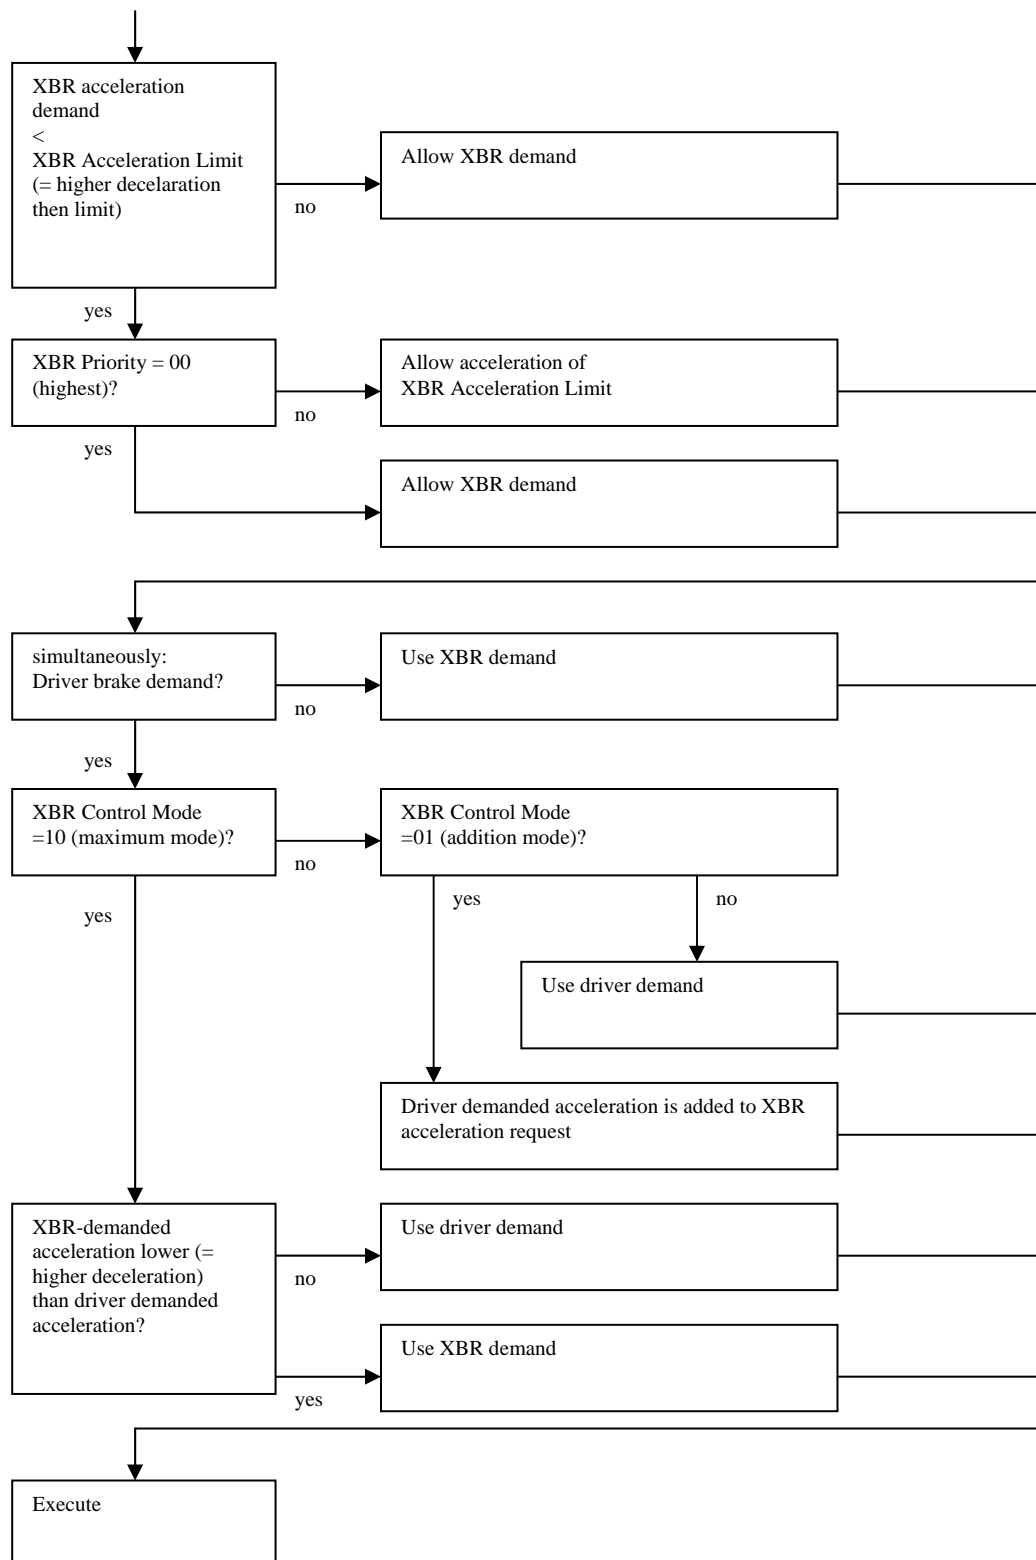

FIGURE PGN1024_B - XBR PRIORITY SELECTION LOGIC

PGN 52992 – Continuous Torque & Speed Limit Request

The TSC1 message allows J1939 network devices to temporarily control engine and retarder speed and torque. This approach allows engine (and retarder) speed to be controlled by one device for a limited period of time. This may need to happen for brief emergency conditions (as requested by an anti-lock braking system for example) or in order to synchronize engine speed with some other device such as a transmission in order to allow a shift. Conflicting speed and torque requests from different devices are resolved by a predefined arbitration scheme.

Not every torque or speed need is satisfactorily addressed by this plan, however. Occasionally a network device may wish to impose longer lasting limits on speed and torque. For instance, as long as a transmission is in third gear, it may not be able to withstand all the torque the engine (or retarder) can produce. Or, an auxiliary device such as a pump may only operate correctly if engine speed and torque are kept within some fairly limited range *but not necessarily at one precise speed/torque!* In these cases, the network device does not need to command the precise speed or torque, but does have a legitimate desire to keep it within some boundary for an extended period of time. The TSC1 message doesn't provide this ability.

How: The ECM and retarder controller(s) first must define a "window" within the torque map. The window should be chosen carefully, and shouldn't be any larger than necessary. Any requests for continuous limits that attempt to intrude on this window will succeed only in setting limits at the very threshold of the window. For example, if the ECM declares that minimum continuous torque limits must be less than 900 lb-ft, and some device attempts to set a minimum continuous torque of 1000 lb-ft, the actual applied continuous limit will be 900 lb-ft (thus 900 lb-ft is the *minimum continuous* torque). When this limit is applied, the engine will always produce at least 900 lb-ft of torque. Similarly, if the engine declares that minimum continuous engine speed cannot be more than 1100 RPM, any attempts at setting a minimum continuous engine speed of over 1100 RPM will result in a minimum continuous engine speed of 1100 RPM. That is, the engine has declared beforehand that it will *always* be able to operate at least at 1100 RPM.

Periodically, the ECM and retarder controller(s) will transmit the dimensions of this window, as well as what actual continuous limits have been applied. This allows the engine to adjust the size and shape of the "window" to allow for derates and provides feedback to the various devices requesting continuous torque and/or speed limits.

The following figure shows an example torque curve with a "window" inside.

FIGURE PGN52992_A

The following figure shows how the ECM will treat requests that are outside of the bounds set by the “window.” Note that the ECM has declared a “maximum allowable minimum” and a “minimum allowable maximum” for both speed and torque. These limits form a sort of rectangular “window” within the torque. The engine **must** be free to operate within this window; no continuous limits will be accepted that would intrude on it. In the diagram, some network device has ignored those values and attempted to set a minimum continuous speed higher than allowed. Remember, a minimum continuous speed means that the engine must always maintain an RPM of that value or greater. The ECM cannot accept the requested limit, so it applies a continuous limit as close as possible: right at the boundary set by “maximum value allowed for minimum continuous speed.” Requests for Minimum Continuous Speed and Max/Min continuous torque are handled the same way.

FIGURE PGN52992_B

Things get a little more complicated when a retarder is included. Fortunately, only the engine compression brake retarder has any real relationship to the engine's torque map. Because other retarders may work against the engine, only the compression brake is generally controlled by the same ECU. For this reason, we must give it more careful attention.

The following figure illustrates one of the problems. Suppose continuous limits have been applied to the engine and retarder as indicated by the rectangular boxes within the torque maps. If the engine is prohibited from allowing torque to decrease below x , how can the retarder be engaged? An engine compression brake retarder needs zero fueling for the engine in order to engage. The simple answer is that if there is a minimum continuous torque limit applied to the engine, the retarder will not be engaged. How does the reverse case behave? If the retarder is of a type other than engine compression brake, it may work against the engine and continuously produce a negative torque. Engine compression brake retarders must not send out a list of acceptable limits that would allow such conundrums. In practical terms, this means that engine compression brake retarders must set their Maximum Continuous Torque limit (think of it as MINIMUM continuous BRAKING torque limit) to zero in order for the retarder to ever be engaged. Similarly, the continuous limits as actually applied to the engine must allow zero torque if the retarder is to be engaged.

(R) PGN 64932 – PTO Drive Engagement

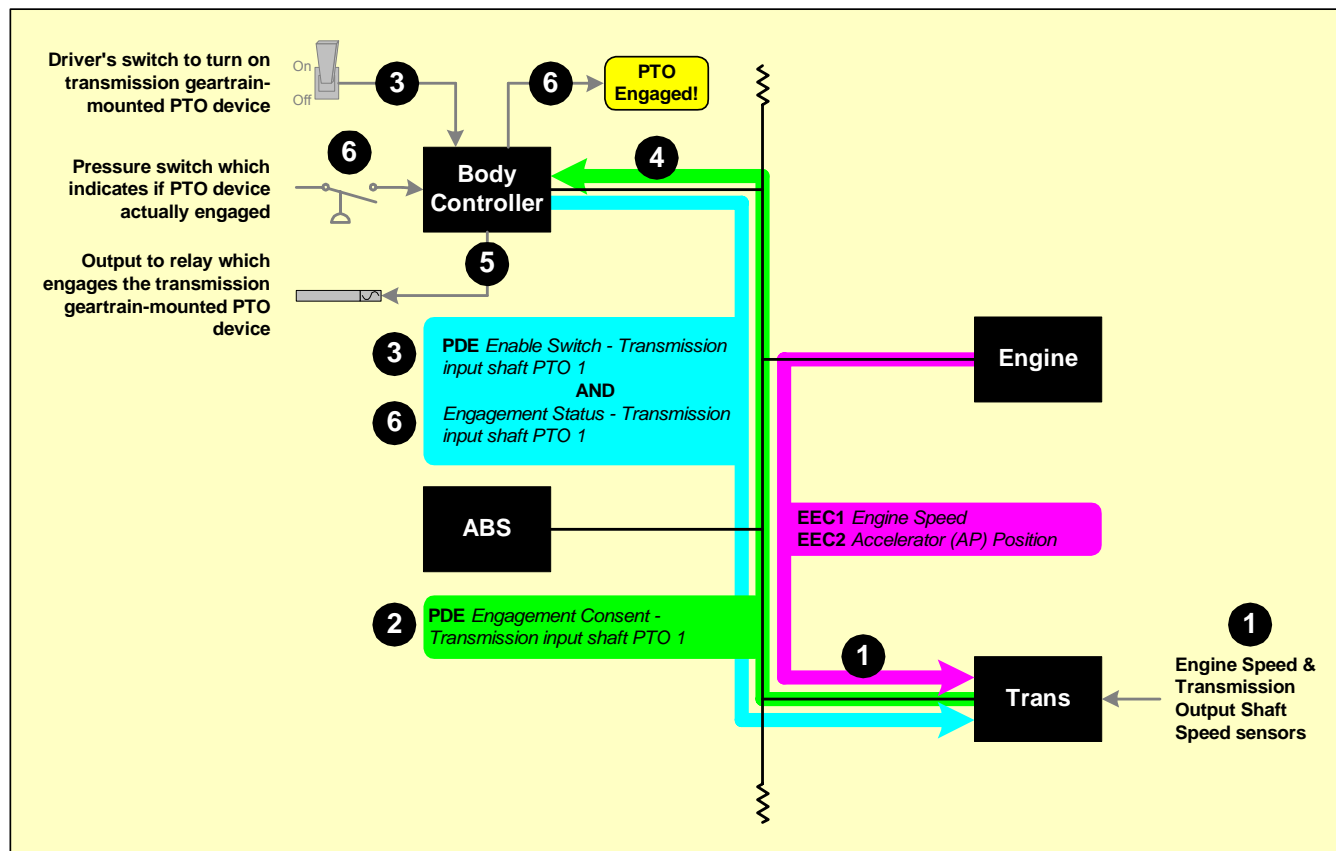

FIGURE PGN64932_A – VEHICLE OEM CONTROLLER INTERFACES WITH ALL PTO WIRING

More ideal from an OEM standpoint, as they no longer need any specialized PTO wiring for different makes of transmissions.

1. The transmission continually monitors the conditions it requires before its PTO drive can be engaged. This may include internal sensors as well as data collected from the network, such as throttle position.
2. Regardless of whether the operator has requested PTO engagement, the 'engagement consent' status is continually broadcast by the transmission.
3. The operator turns on the cab switch to activate the PTO device mounted on the transmission. The Body Controller reflects this switch status in its PDE message broadcast; the transmission or other devices on the network may choose to use this information in their control logic.
4. Among its conditions and inputs required before engaged the PTO drive, the Body Controller checks the 'consent' status broadcast from the transmission.
5. If conditions are acceptable, the Body Controller power the circuit to engage the PTO mounted on the transmission.

6. The Body Controller monitors the progress of the physical PTO engagement, and reflects this in its PDE broadcast so that other on the network may use the information.
7. The Body Controller continues to monitor the transmissions 'consent' broadcast, and disengages the PTO if at any time the transmission rescinds its consent.

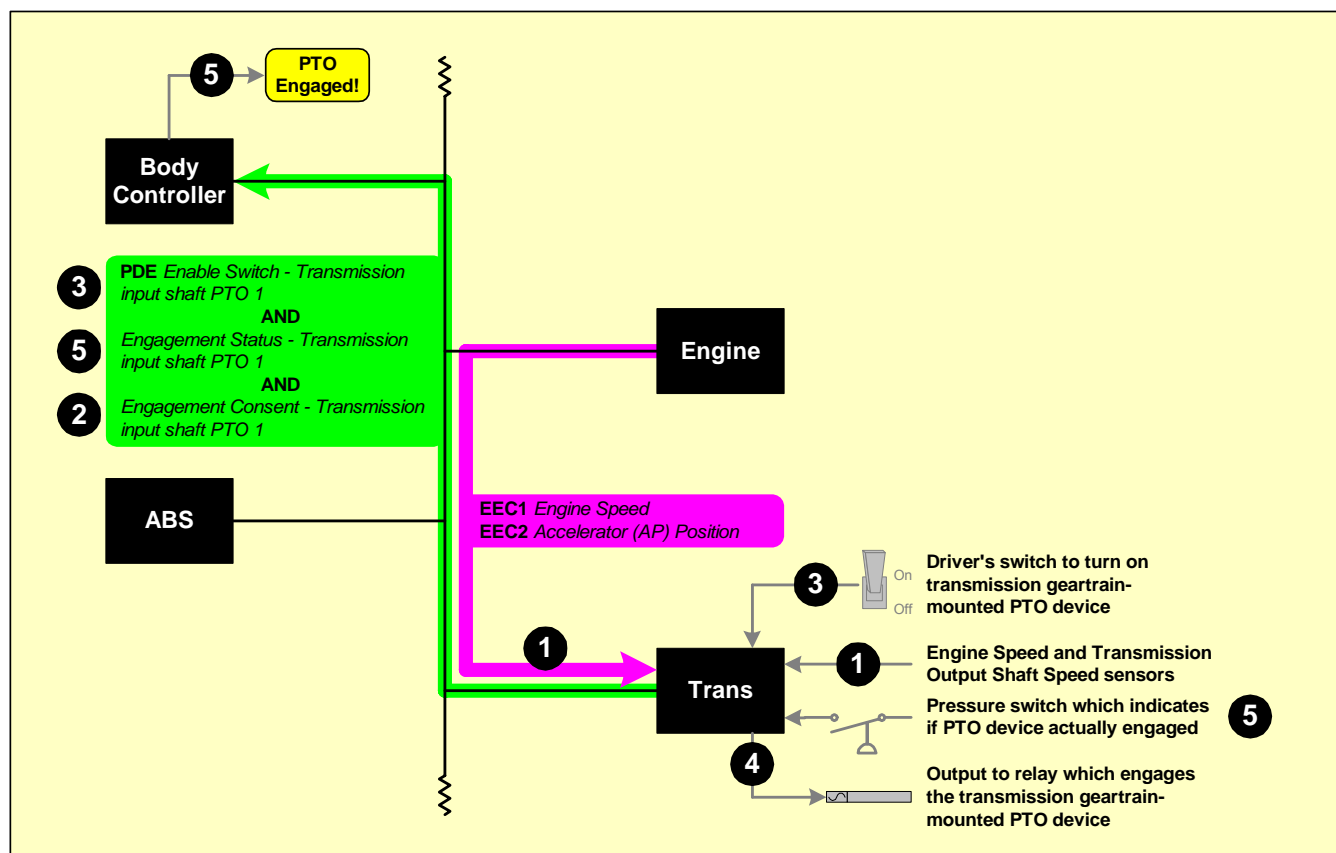

FIGURE PGN64932_B – COMPONENT DRIVING PTO INTERFACES WITH ALL PTO WIRING

This arrangement might be better suited for small OEMs who would rather not deal with figuring out the PTO wiring.

The key point is that the proposed PTO Engagement message structure would adapt to either configuration. Note that the Body Controller broadcasts no new messages; only the transmission sends the PDE message.

1. The transmission continually monitors the conditions it requires before its PTO drive can be engaged. This may include internal sensors as well as data collected from the network, such as throttle position.
2. Regardless of whether the operator has requested PTO engagement, the 'engagement consent' status is continually broadcast by the transmission.
3. The operator turns on the cab switch to activate the PTO device mounted on the transmission. The Transmission Controller reflects this switch status in its PDE message broadcast; the Body Controller or other devices on the network may choose to use this information in their control logic.

4. If conditions are acceptable, the Transmission Controller power the circuit to engage the PTO mounted on the transmission.
5. The Transmission Controller monitors the progress of the physical PTO engagement, and reflects this in its PDE broadcast so that other on the network may use the information.

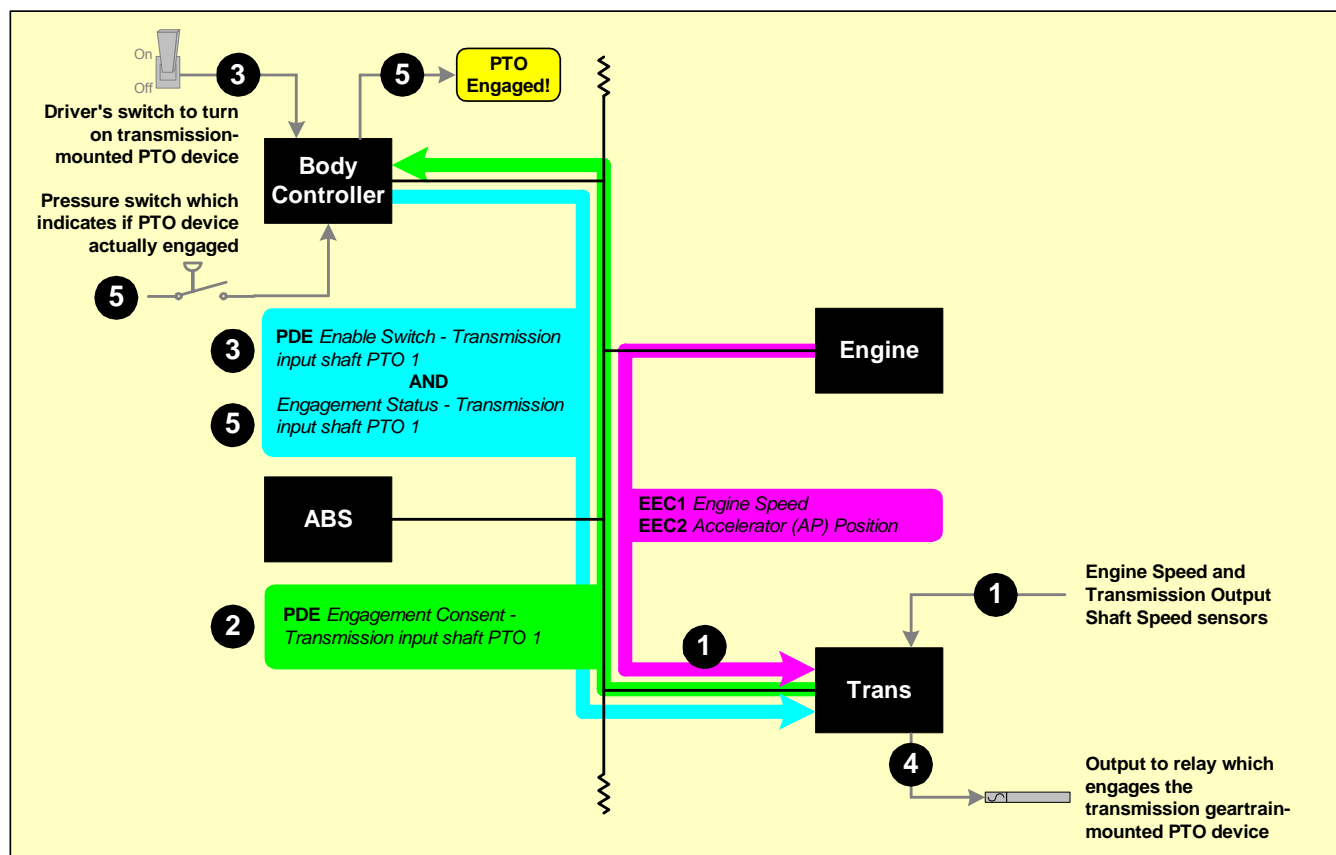

FIGURE PGN64932_C – DISTRIBUTED PTO INTERFACES WIRING

This arrangement is shown to illustrate the flexibility of the PDE messaging.

The various inputs are distributed among two or three controllers that are part of the PTO engagement system.

1. The transmission continually monitors the conditions it requires before its PTO drive can be engaged. This may include internal sensors as well as data collected from the network, such as throttle position.
2. Regardless of whether the operator has requested PTO engagement, the 'engagement consent' status is continually broadcast by the transmission.
3. The operator turns on the cab switch to activate the PTO device mounted on the transmission. The Body Controller reflects this switch status in its PDE message broadcast; the Transmission Controller receives this input.

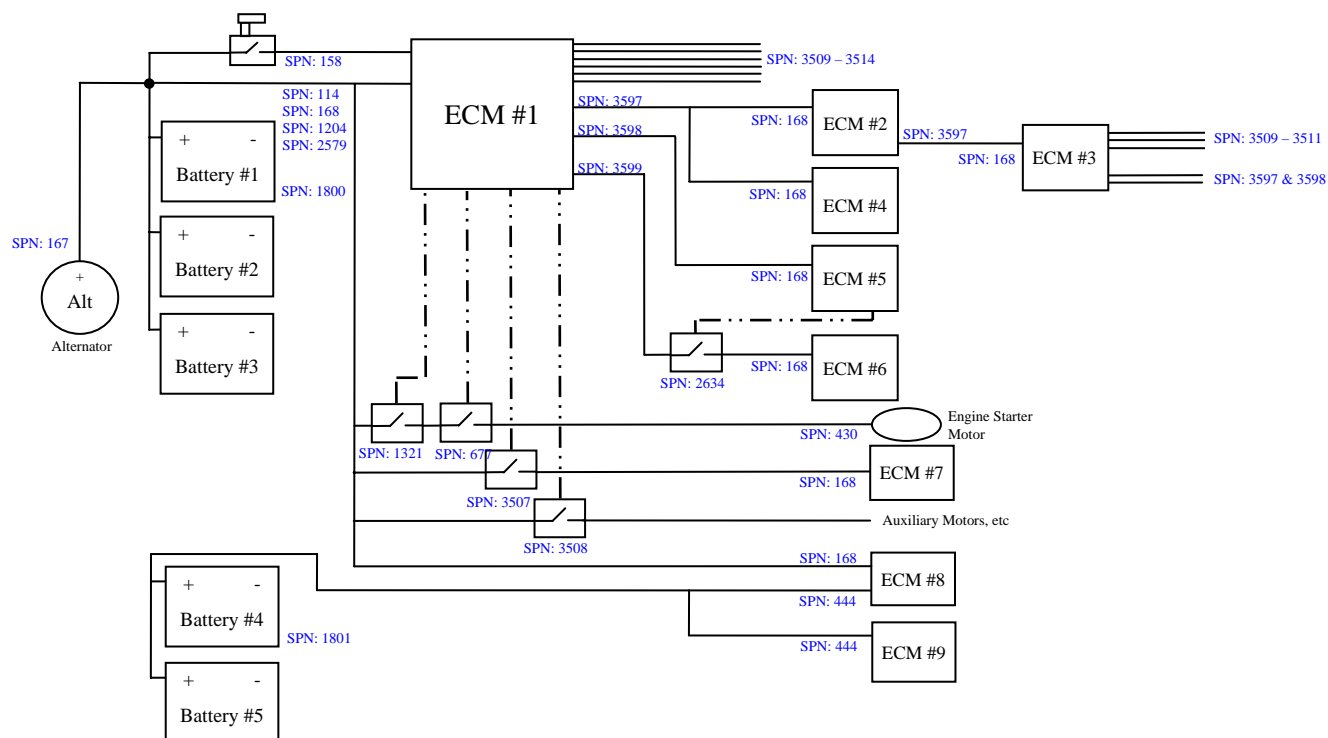

4. If conditions are acceptable, the Transmission Controller power the circuit to engage the PTO mounted on the transmission.
5. The Body Controller monitors the progress of the physical PTO engagement, and reflects this in its PDE broadcast so that other on the network may use the information.

Mode	Torque/Speed Point 2	Governor Gain KP	High Idle Speed
1	Available	Not available	Available
2	Not Available	Available	Available
3	Available	Available	Not available

The following points are shown in Figures PGN65251_A, PGN65251_B, and PGN65251_C.

- Point 1 (required): Torque/speed point at idle
- Point 2 (required): Mode 1 & 3: Torque/speed point at which the high speed governor becomes active
Mode 2: Normal torque/speed point
- Point 3,4,5 (required): Torque/speed points between points 1 and 2 to permit linear interpolation over the entire torque range. It is required that one of these points indicate the peak torque point for the current engine torque map.
- Point 6 (mode dependent): Mode 1 & 2: High idle speed (torque = 0)
Mode 3: Not available (point is defined by the endspeed governor where torque = 0)
- Point 7 (optional): Maximum momentary engine override speed (torque = 0)
- Reference engine torque: Engine torque in Nm. This parameter is the reference value of 100% for all defined indicated engine torque parameters. It is only defined once and doesn't change if a different engine torque map becomes valid.
